Product Images

Short Description

ROFI Demining Visor is a high-end quality and longer life span product, offering best protection according to STANAG 2920 and other international standards, with a low weight and being adjustable in size (one size fits all).

Description

Protection Level

ROFI Demining Visor has a protection level of V50 of 250 m/s, according to STANAG 2920.

Material Specifications

The material used to manufacture the demining Visor is 5 mm untreated polycarbonate, obtained from a known, ISO-certified supplier.

Weight

The weight of the visor, including its protective bag is of approximately 1 kg.

Visor protected area

ROFI Demining Visor's protective area is approximately 1222 cm².

Primary features

- The straps on the headframe are adjustable, therefore it can fit any head size, and the removable washable sweatband makes the visor more comfortable to wear.
- The Visor has an easily replaceable scratch shield in 0.7 mm polycarbonate, which protects it during use, transportation, and storage.

The design of the headframe allows maximum cooling and airflow to enhance comfort.
