INTRODUCTION

Purpose

This manual describes a programming method for the OfficeServ 7000 Series system users. OfficeServ 7000 Series allows you to utilize a digital phone to simply change the system setup. Likewise, using a phone to change the system setup is called MMC (Man Machine Communication) program. This manual describes how to program a digital phone.

Audience

This manual is intended for users who program the MMC of the OfficeServ 7000 Series system.

Manual Contents

This manual is composed of two Chapters and Abbreviation. Each chapter is introduced as follows:

CHAPTER 1. Overview of MMC Programming

This chapter describes things to know before starting MMC programming and about the buttons of digital phone and cautions.

CHAPTER 2. MMC Programming

This chapter describes in detail how to use each MMC program. MMCs are listed in numerical order.

ABBREVIATION

Acronyms frequently used in this document are described.

Conventions

The following types of paragraphs contain special information that must be carefully read and thoroughly understood. Such information may or may not be enclosed in a rectangular box, separating it from the main text, but is always preceded by an icon and/or a bold title.

WARNING

Provides information or instructions that the reader should follow in order to avoid personal injury or fatality.

CAUTION

Provides information or instructions that the reader should follow in order to avoid a service failure or damage to the system.

CHECKPOINT

Provides the operator with checkpoints for stable system operation.

NOTE

Indicates additional information as a reference.

Console Screen Output

- The lined box with 'Courier New' font will be used to distinguish between the main content and console output screen text.
- '**Bold Courier New**' font will indicate the value entered by the operator on the console screen.

Reference Manuals

OfficeServ 7100/7200/7400 Installation Manual

Describes the installation procedures and specifications for the OfficeServ 7100/7200/7400 system.

OfficeServ 7100/7200/7400 System Description

Describes the business features available with the OfficeServ 7100/7200/7400 system.

Revision History

EDITION	DATE OF ISSUE	REMARKS
00	12. 2008.	First Edition
01	05. 2009.	Modified 27 MMCs
02	10. 2009.	Modified 6 MMCs (199, 219, 304, 408, 614, 754)
03	07. 2010.	Added 3 MMCs (870, 871, 872), deleted MMC 739, and modified 47 MMCs
5.0	02. 2012.	- Manual Edition allocation method is changed. (Ed.04 → Ver.5.0) - Modified OfficeServ S/W V4.60 related MMCs

This page is intentionally left blank.

SAFETY CONCERNS

The purpose of the Safety Concerns section is to ensure the safety of users and prevent property damage. Please read this document carefully for proper use.

Symbols

	Caution
⚠️	Indication of a general caution

	Restriction
🚫	Indication for prohibiting an action for a product

	Instruction
❗	Indication for commanding a specifically required action

⚠ WARNING

	Before using the Auto Record feature
🚫	Before using the Auto Record feature, make sure that you are not violating any laws. Samsung is not responsible for any illegal use of this feature.

⚠ CAUTION

	CALL COST (MMC 508)
⚠	Changing this value when there is a call in progress may result in an inaccurate call cost. This MPD facility requires the Meter Pulse Detection version of the trunk card.

	When changing the MMC [506], [807], [812] and [816]
⚠	MMC **[506]**, **[510]**, **[807]**, **[812]** and **[816]** should not be changed from the default levels without the assistance of the local SAMSUNG distributor.

	Compliance with the National Version Standards
❗	For the national version, OfficeServ 7000 Series is designed to comply with the standards of the corresponding country. Therefore, if you need to use MMC 812 (Set Country Code), please consult your dealer for advice.

TABLE OF CONTENTS

CHAPTER 2.   MMC Programming   2-1

ABBREVIATION   I

LIST OF FIGURES

LIST OF TABLES

This page is intentionally left blank.

CHAPTER 1. Overview of MMC Programming

In this chapter, the things to know before you start MMC programming, and the phone buttons and cautions will be discussed.

1.1 Introduction to Programming

The MMC means the changes on the data that is used for the system operation program.
The MMC can be divided into programmable one and non-programmable one.
The programmable MMC is classified into 3 levels, such as technician, operator, and station level. The technician level programming and the operator level programming require a passcode for each level and the station level programming does not require a passcode.

> **Program List by User's Level**
>
> For more information about the programming level, refer to '1.4 Program List by User's Level' of this chapter.

1.2 Digital Phones

You need a digital display (LCD) phone in order to carry out programming.
These include DCS Euro keysets and DS/ITP-5000 Series keysets, and some examples are described in the following sections. All use special programming buttons to select options on the display screen.

1.2.1 DCS Euro Phones
Figure 1.1   24B LCD DCS Euro Phone

- 24B LCD phone has 24 programmable buttons: Left column is numbered 1-12 from the top. Right column is numbered 13-24 from the top. Buttons 19 to 24 are special buttons 'A-F' used for programming.

- 12B LCD phone has 12 programmable buttons numbered 1-12 from top to bottom: Buttons 7 to 12 are special buttons 'A-F' used for programming.

- 6B LCD phone has 6 programmable buttons: Left column is numbered 1-3 from the top. Right column is numbered 4-6 from the top. Buttons 1 to 3 are special buttons 'A-C' and buttons 4 to 6 are special buttons 'D-F' used for programming.

The special buttons are referred to within the relevant MMCs. For example, button 'A' is used to toggle between uppercase and lowercase characters when entering text on the display.

All programmable buttons can be programmed with functions as required.

The left soft button is used to save data or to move the cursor in the LCD display to the left. The right soft button is used to save data or to move the cursor in the display to the right. Other buttons also have special functions when in programming mode:

- ANS/RLS Button: Select 'ALL' option for making changes to all-rather than individual-stations/trunks/etc.

- Hold Button: Clear an entry in the display.

- Volume Buttons: Scroll through display options.

- TRSF (Transfer) Button: Enter MMC programming mode or store data and exit programming mode.

- Speaker Button: Store data and advance to next MMC.

1.2.2 DS/ITP-5000 Series Phones

These include the DS-5038S, DS/ITP-5021L, DS/ITP-5021D, DS/ITP-5014D, DS-5014S, and DS-5007S. Examples are shown in the figures below.

Figure 1.4   DS-5014S/5007S Phone

The DS/ITP-5000 series phones have 38, 21, 14 or 7 programmable buttons that can be programmed with functions. Also, there are several other function buttons: the dial buttons, the volume control buttons, the redial button that allows you to redial the last phone number dialed, the conference button for setting up conference calls, the transfer button used to transfer a call to another station, the hold button to hold a call, the speaker button, and the navigation buttons for easy selection of phone options and menus.

The LCD displays the station status and various other kinds of information. Using three colors (red, green, and yellow) the station status indicator displays the current status of station.

When programming, other functions programmed on buttons are as follows:

- Volume Buttons: Scroll through items in the display.
- Redial Button: Select 'ALL' option for making changes to all, rather than individual, stations/trunks/etc.
- Soft Buttons: Save data or move the cursor left and right.
- Speaker Button: Save data and proceed to the next program.
- Hold Button: Erase the previously entered item.
- A Button: Select uppercase or lowercase text.
- Transfer Button: Enter the programming mode.

Using large LCD Phones

Large LCD phones (DS/ITP-5012L) do not have programmable buttons. Instead, they display programming functions on the LCD to be selected via the selection buttons. Refer to your keyset user guide for more information.

1.3 Cautions in Programming

- Programming can be done only while the handset is placed on the phone in idle state.

- Full programming can be done on any digital LCD phone.

- Only station level programming is allowed on a phone that does not have an LCD display.

- If the LCD displays an 'INVALID DATA' message while programming, reenter the correct data.

- If no button is pressed for a certain period of time during programming (default is 60 seconds), the phone returns to the idle state from programming mode.

- Programming mode halts if the handset is picked up or the Transfer button is pressed or the phone is unplugged. Any data previously entered in the display is saved.

1.4 Program List by User's Level

The MMC program can be divided into programmable one and non-programmable one. The programmable MMC is classified into 3 levels, such as technician, operator, and station level. In this section, the programmable MMC for each level will be introduced.

1.4.1 Station Level Programming

Programming can be done for only station level programs.

Table 1.1   Station Level Programming list

MMC No.	MMC Name
MMC: 100	STATION LOCK
MMC: 101	CHANGE USER PASSCODE
MMC: 102	CALL FORWARD
MMC: 103	SET ANSWER MODE
MMC: 104	STATION NAME
MMC: 105	STATION SPEED DIAL
MMC: 106	STATION SPEED DIAL NAME
MMC: 107	KEY EXTENDER
MMC: 108	STATION STATUS
MMC: 109	DATE DISPLAY
MMC: 110	STATION ON/OFF
MMC: 111	PHONE RING TONE
MMC: 112	ALARM REMINDER CLOCK
MMC: 113	VIEW MEMO NUMBER
MMC: 114	PHONE VOLUME
MMC: 115	SET PROGRAMMED MESSAGE
MMC: 116	ALARM AND MESSAGE
MMC: 117	EDIT TEXT MESSAGE
MMC: 118	CONFERENCE GROUP
MMC: 119	CALLER ID DISPLAY
MMC: 120	LARGE LCD OPTIONS
MMC: 121	PHONE LANGUAGE
MMC: 122	NEWS DISPLAY SPEED
MMC: 125	EXECUTIVE STATE
MMC: 126	MOBEX NUMBER
MMC: 127	STATION E-MAIL ADDRESS
MMC: 128	MOBEX CALLER
MMC: 129	MOBEX SCHEDULE
MMC: 199	SHOW LICENSE

1.4.2   Operator Level Programming

A technician can do programming within the range set by the MMC **[802]** CUSTOMER
ACCESS MMC NUMBER.
Programming is allowed for any phone within the tenant group, but it can be done for only
one phone at a time.

1.4.2.1 System Related MMC

The MMC programs related to the function of the system are as follows:

Table 1.2   System Related MMC list

MMC No.	MMC Name
MMC: 200	OPEN CUSTOMER PROGRAMMING
MMC: 201	CHANGE CUSTOMER PASSCODE
MMC: 202	CHANGE FEATURE PASSCODE
MMC: 203	ASSIGN UA DEVICE
MMC: 204	COMMON BELL CONTROL
MMC: 205	ASSIGN LOUD BELL
MMC: 206	BARGE-IN TYPE
MMC: 207	ASSIGN VM/AA PORT
MMC: 208	ASSIGN RING TYPE
MMC: 209	ASSIGN ADD-ON MODULE
MMC: 210	CUSTOMER ON/OFF PER TENANT
MMC: 211	DOOR RING ASSIGNMENT
MMC: 214	DISA ALARM RINGING STATION
MMC: 217	ISDN SERVICE TYPE
MMC: 220	STATION PAIR
MMC: 221	TRAFFIC REPORT OPTION
MMC: 222	EXTENSION TYPE
MMC: 223	FAX PAIR
MMC: 224	AUDIO PROMPT
MMC: 225	IP-UMS/IVR SERVICE

1.4.2.2 Station Related MMC

The MMC programs related to the function of the station are as follows:

Table 1.3   Station Related MMC list

MMC No.	MMC Name
MMC: 300	CUSTOMER ON/OFF PER STATION
MMC: 301	ASSIGN STATION COS
MMC: 302	PICKUP GROUPS
MMC: 303	ASSIGN BOSS/SECRETARY
MMC: 304	ASSIGN EXTENSION/TRUNK USE
MMC: 305	ASSIGN FORCED CODE
MMC: 306	HOT LINE/OFF HOOK SELECTION
MMC: 308	ASSIGN BACKGROUND MUSIC SOURCE
MMC: 309	ASSIGN STATION MOH SOURCE
MMC: 310	LCR CLASS OF SERVICE
MMC: 312	ALLOW CALLER ID
MMC: 313	COPY STATION USABLE
MMC: 314	CONFIRM OUTGOING CALL
MMC: 315	BRANCH GROUP
MMC: 316	DISTINCTIVE RINGING
MMC: 317	ASSIGN STATION/STATION USE
MMC: 318	ASSIGN TRUNK/TRUNK USE
MMC: 319	CUSTOMER SET RELOCATION
MMC: 320	PRESET FORWARD NO ANSWER
MMC: 323	CALLING PARTY NUMBER
MMC: 324	SLI2 GAIN
MMC: 326	RING BACK TONE MESSAGE
MMC: 327	MULTI MEDIA SERVICE
MMC: 328	MOBEX INFO
MMC: 329	RING GROUP
MMC: 330	Emergency Local Routing

1.4.2.3 Trunk Related MMC

The MMC programs related to the function of the trunk are as follows:

Table 1.4   Trunk Related MMC list

MMC No.	MMC Name
MMC: 400	CUSTOMER ON/OFF PER TRUNK
MMC: 401	TRUNK LINE/PBX LINE
MMC: 402	TRUNK DIAL TYPE
MMC: 403	TRUNK TOLL CLASS
MMC: 404	TRUNK NAME
MMC: 405	TRUNK CO TEL NUMBER
MMC: 406	TRUNK RING ASSIGNMENT
MMC: 407	FORCED TRUNK RELEASE
MMC: 408	ASSIGN TRUNK MOH SOURCE
MMC: 409	TRUNK STATUS READ
MMC: 410	ASSIGN DISA TRUNK

CHAPTER 2. MMC Programming

This chapter describes how to use each MMC program as it was listed.

2.1 Overview of Programming Procedure

The order of programming will be discussed before explaining programming method of each list. Please read the description carefully before programming.

The programming order is as follows:

1) Make the programmable state.
   - Press the Transfer button at pause.
   - Enter the program number, either 200 or 800.
   - Enter either the operator passcode or the technician passcode.
   - Press 1 dial button to 'enable' the programming mode.
   - In case of Program 800 Technician Program Mode Setting, enter the tenant number to be programmed.

2) Make the program number selectable state.
   If the Speaker button is pressed, the program selection mode appears.
   Or, if the Transfer button is pressed, the programming state ends and the pause state begin.

3) Select a program.
   Enter the program number.
   Or, select the program number with the Volume button and press the Speaker button.
   Or, press Transfer button in a pause state and enter the program number.

4) Start programming the corresponding program.

2.2 Programming Procedure

This section describes a procedure of each program. Refer to the programming procedure corresponding to the MMC.

[100] STATION LOCK

Allows the system administrator or technician to lock or unlock an individual station or all stations simultaneously. The three options are as follows:

No	Type	Description
0	UNLOCKED	Unlocks a locked station.
1	LOCKED OUT	The phone cannot make calls outside the system. It can however make and receive intercom calls and receive incoming Trunk Line calls. When in this mode the Hold button will flash slow RED.
2	LOCKED ALL	The phone cannot make or receive any calls. When in this mode the Hold button will light steady RED.

CONDITIONS

- Check if the station lock function is disabled at 'MMC 301 ASSIGN STATION COS'. If so, the station cannot be locked, but a locked station can be unlocked.

- A station can be locked or unlocked under any condition when the station is in Operator Level Programming or Technician Level Programming.

DEFAULT DATA

ALL STATIONS UNLOCKED

ACTION

1) Press Transfer button and enter 100. Display shows:

2) Dial station number. (e.g. 205)
   OR
   Press Volume button to select station and press Right Soft button to move cursor.
   OR
   Select all stations.

3) Enter 0 to unlock or 1 to lock. (e.g. 1)
   OR
   Press Volume button to make selection and press Right Soft button to return to step 2.

DISPLAY

```

```

```
[205] STN LOCK
LOCKED OUT
```

4) Press Transfer button to save and exit.
OR
Press Speaker button to save and advance to next
MMC.

RELATED ITEMS

MMC 101   CHANGE USER PASSCODE
MMC 301   ASSIGN STATION COS
MMC 701   ASSIGN COS CONTENTS

[101] CHANGE USER PASSCODE

Allows the system administrator or technician to reset any phone's passcode to its default value of '1234'. This MMC cannot display station passcodes; it can only reset them to default.

Phone users can set or change their individual passcodes. The passcode is used to lock or unlock the phone for toll restriction (call barring) override and to access the DISA feature.

CONDITIONS

- The passcode of a station performing Operator Level Programming or Technician Level Programming cannot be changed while the program mode is 'ENABLE'.

- An Operator or Technician Level can only delete the passcode of a station and reset the passcode to the default value, '1234', not permitting to know the passcode.

> **Default passcodes**
> Default passcodes cannot be used for toll restriction override or for DISA access.
>
> NOTE

DEFAULT DATA

ALL STATION PASSCODES: 1234

ACTION

1) Press Transfer button and enter 101.
   Display shows:

2) Dial phone number. (e.g. 205)
   OR
   Use Volume button to scroll through phone numbers and press Right Soft button to move the cursor right.

3) Press Hold button to reset passcode.

4) Press Transfer button to save and exit.
   OR
   Press Speaker button to save and advance to next MMC.

PASSCODE:****
```

```
[205] PASSCODE
PASSCODE:1234
```

RELATED ITEMS

MMC 100   STATION LOCK

[102] CALL FORWARD

Allows the system administrator to program the call forward destinations for other station users. This MMC also allows call forward to be set after the destination has been entered.

Allows several types of call forwarding: FORWARD ALL, FORWARD NO ANSWER, FORWARD BUSY and FORWARD DND. There is an additional option, FORWARD BUSY/NO ANSWER, that allows both of these options to be activated at the same time, provided that destinations have been entered for both.

No	Type
0	FORWARD CANCEL
1	FWD ALL
2	BUSY
3	NO ANS
4	BUSY/NO ANSWER
5	FWD DND

CONDITIONS

- When 'BUSY/NO ANSWER' is selected, calls are forwarded to stations set in 'BUSY' and 'NO ANS'. Thus, a destination number must be set for both 'BUSY' and 'NO ANS' before you can select the 'BUSY/NO ANSWER' option.

- If forwarding is set to 'OFF' in MMC 701, ASSIGN COS CONTENTS, call forwarding cannot be set but can be cancelled. (Default: 'OFF')

- Both 'FORWARD' and 'EXT FWD' must be set to 'ON' in MMC 701, ASSIGN COS CONTENTS in order to forward a call to an external number. If only 'FORWARD' is set to 'ON', calls can only be forwarded to internal numbers. (Default: 'OFF')

[103] SET ANSWER MODE

Allows the system administrator to change the answer mode of any phone. Each phone can have its answer mode set to one of the following options:

No	Type	Description
0	RING MODE	The phone will ring in one of eight custom ring patterns. Calls are answered by pressing the ANS/RLS or SEND button or by lifting the handset.
1	AUTO ANSWER MODE	After giving a short attention tone, the phone will automatically answer calls on the speakerphone. When a Trunk line is transferred to a phone in Auto Answer, the screened portion of the call will be Auto Answered, but the phone will ring when the transfer is complete if you have not pressed the ANS/RLS or SEND button or lifted the handset.*
2	VOICE ANNOUNCE	The phone will not ring. After a short attention tone, callers can make an announcement but the ANS/RLS or SEND button or handset must be used to answer calls.

To answer the C.O. call automatically

To answer the C.O. call automatically, set 'ON' the option 'AUTO ANS CO' in MMC 110.

DEFAULT DATA

RELATED ITEMS

MMC 111   PHONE RING TONE

[104] STATION NAME

Allows the system administrator or technician to enter a name up to 11 characters to identify an individual station.

ENTERING CHARACTERS

Names are written using the keypad. Each key press selects a character. Pressing the dial pad key moves the cursor to the next position. For example, if the directory name is 'SAM SMITH,' press the number '7' four times to get the letter 'S'. Now press the number '2' once to get the letter 'A'. Continue selecting characters from the table below to complete your message. Pressing 'A' button toggles between upper case and lower case.

> **Volume Up/Down keys**
>
> When the character you want appears on the same dial pad key as the previous character, press the Volume Up button to move the cursor to the right or the Volume Down button to move the cursor to the left. A space can be entered using these keys.

COUNT	1	2	3	4	5
DIAL 0	<	>	.	)	0
DIAL 1	Space	?	,	!	1
DIAL 2	A	B	C	@	2
DIAL 3	D	E	F	#	3
DIAL 4	G	H	I	$	4
DIAL 5	J	K	L	%	5
DIAL 6	M	N	O	^	6
DIAL 7	P	Q	R	S	7
DIAL 8	T	U	V	*	8
DIAL 9	W	X	Y	Z	9
DIAL *	:	=	[	]	*

The # button can be used for the following special characters:
#, space, &, !, :, ?, ., ,, %, $, -, <, >, /, =, [,], @, ^, (,), _, +, {, }, |, ;, ", →, '. \.

[105] STATION SPEED DIAL

Allows the system administrator or technician to assign phone numbers to a station's personal speed dial locations.

CONDITIONS

Each station may have up to 50 locations (or bins) assigned to it in MMC 606 (Assign Speed Block). The speed dial bins are numbered 00~49. Each assigned phone number consists of a trunk or trunk group access code followed by a separator and up to 24 digits to be dialed. These dial digits may consist of 0~9, ∗ and #. If the system recognizes a valid trunk or trunk group access number, it will automatically insert the separator.

DEFAULT DATA

NONE

PROGRAM BUTTONS

B	Used to insert a flash code 'F'
C	Used to insert a pause code 'P'
D	Used to insert a pulse/tone conversion code 'C'
E	Used to mask/unmask following digits (shows as '[' or ']')
F	Used to enter name for speed dial bin (see MMC 106)

ACTION / DISPLAY

ACTION	DISPLAY
1) Press Transfer button and enter 105. Display shows:	`[201] SPEED DIAL` `00:`
2) Dial station number. (e.g. 205) OR Press Volume button to select station and press Right Soft button to move cursor.	`[205] SPEED DIAL` `00:`
If selected station has no speed dial bins, the display will be as shown and a new station may be selected.	`[205] SPEED DIAL` `SPDBLK NOT EXIST`
3) Dial location number. (e.g. 05) OR Press Volume button to select location and press Right Soft button to move cursor.	`[205] SPEED DIAL` `05:_`

4) Enter trunk access code (e.g. 9) followed by the number to be dialed. (e.g. 4264100)
    OR
    Press Right Soft button to return to step 2.
    OR
    Press Left Soft button to return to step 3.
    Press Hold button to clear an entry.

[110] STATION ON/OFF

Allows the system administrator to set any of the phone features listed below.

No	Feature	Default	Description
00	AUTO HOLD	OFF	Automatically places an existing Trunk Line call on hold if a CALL key, trunk key or trunk route key is pressed during that call.
02	HEADSET USE	OFF	When ON, this feature disables the hook switch allowing a headset user to answer all calls by pressing the ANS/RLS button or SEND and END buttons.
03	HOT KEYPAD	ON	When ON, this feature allows you to dial directory numbers without having to first lift the handset or press the Speaker button.
04	KEY TONE	ON	Allows you to hear a slight tone when pressing buttons on phone.
05	PAGE REJOIN	ON	Allows you to hear the remaining part of page announcements if phone becomes free during a page.
06	RING PREF.	ON	When OFF, requires you to press the fast flashing button to answer a ringing call after lifting the handset.
08	AUTO CAMPON	OFF	When ON, phone users can allow intercom calls to camp-on to other phones without having to press a CAMP-ON key.
09	AME BGM	OFF	This feature selects whether a station using Answer Machine Emulation will hear their personal greeting or BGM while callers are listening to the personal greeting. A BGM source must be selected for this to work.
10	AME PASSCODE	OFF	When ON, station users who have AME set must enter their station password to listen to messages being left.
11	DISP SPDNAME	OFF	When ON, the speed dial name associated with a speed dial number is displayed on a phone equipped a LCD display when using speed dial.
12	CID REVW ALL	ON	When ON, saves information on all calls that ring at an extension, When OFF, saves information only on calls that were not answered at the extension or were answered by voice mail.
13	SECURE OHVA	ON	When ON, OHVA announcements will be heard on the handset. When OFF, OHVA announcements will be heard over the phone speaker.
15	AUTO ANS CO	OFF	When ON, keyset will automatically answer outside calls through the speakerphone. For this to work, the keyset must be set to Auto Answer mode in MMC 103. Calls to groups cannot be auto-answered.

(Continued)

No	Feature	Default	Description
16	ENBLOCK 2LCD	OFF	Enables en-block dialing for 2-Line LCD phones. This option only works when 2 LINE ENBLOCK option is enabled in MMC 861.
17	STN NO RING	OFF	When ON, no tones will be heard when phone rings.
19	RCV GPU INFO	OFF	When ON, the extensions will receive the information of PING RING. This function can operate in case PING RING SERVICE is enabled in MMC861.
20	MISSED CALL	OFF	When ON, the information of the missed calls will be displayed on extensions. The missed call means that the ringing call is not answered. The information of the missed calls includes the below - The call which was not answered. - In case the call which was occurred by group call was not answered. - In case the call by group call was overflowed to the other extension. - The call which was forwarded because of setting NO ANSWER FORWARD - The call which was picked up by other extensions In case of Call Waiting, it is not included.
22	USE STN RING	OFF	When ON, the IP phone will be use self ring melody, otherwise the IP phone will be use system ring melody.

[129] MOBEX SCHEDULE

OfficeServ always provided simultaneous ring service for MOBEX station and its master before OfficeServ S/W V4.60. But now this service is provided only in specific time and this time can be changeable in MMC129.

The following example may be useful when assigning MOBEX scheduling times:

DAY (SUN~SAT)	Entry (1~3)	Start Time	End Time
SUN	1	ST: 0000	END: 2359
MON	1	ST: 1200	END: 1400
MON	2	ST: 1800	END: 2000

Using a 24-hour clock in the example above notice that MOBEX user can receive a call all day on Sunday. On Monday MOBEX user can receive a call from 12:00 to 14:00 and from 18:00 to 20:00 but in other time MOBEX user can't receive a call and should use his/her own desk phone to answer the incoming call. If there is no scheduling time, OfficeServ always provides simultaneous ring service.

CONDITIONS

- This MMC is available in certain OfficeServ models which support MOBEX features.
- MOBEX schedule can be set by MOBEX ring group master. So if there is no MOBEX ring group, the 'STN NOT EXIST' message is displayed. In this case make MOBEX ring group in MMC329 before setting MOBEX scheduling time.

ACTION

1) Press Transfer button and enter 129. Display shows:

2) Input extension number.
   OR
   Press Volume button to select day.
   Press Right Soft button to move cursor.

3) Dial day number (0-6, e.g. 3 for Weds)
   OR
   Press Volume button to make selection and press Right Soft button.

DISPLAY

```
[2001] SUN (1)
ST:    END:
```

```
[2002] SUN (1)
ST:    END:
```

```
[2002] WED (1)
ST:    END:
```

4) Dial entry number (1~3, e.g. 1).
    OR
    Press Volume button to make selection and press
    Right Soft button.

```
[2002] WED (1)
ST:_    END:
```

5) Dial start time. (e.g. 1030)
    If valid, cursor moves to end time.
    Enter end time.
    If valid, system returns to setp 1.
    Begin again.

```
[2002] WED (1)
 ST:1030 END:_
```

6) Press Transfer button to save and exit.
    OR
    Press Speaker button to save and advance to next
    MMC.

[199] SHOW LICENSE

This MMC shows the admission status of MGI (Media Gate Interface), VM (Voice Mail), AA (Auto Attendant), Soft phone, SIP (Simple Internet Protocol) phone, MOBEX that can be limited as license key.

No	Option	Description
0	MGI LICENSE STS	Maximum Number of MGI channel can be available. This number set using License Key until 8. (This option may not be available in certain OfficeServ models. Maximum number of the channel is different by its model.)
1	VMS LICENSE STS	Maximum Number of VMS channel can be available. This number set using License Key until 4. (This option may not be available in certain OfficeServ models. Maximum number of the channel is different by its model.)
2	AA LICENSE STS	Maximum number of available AA channel. This number can be set up to 4. (This option may not be available in certain OfficeServ models.)
4	SOFT PHONE STS	Maximum number and registered number of SOFT Phone.
5	SIP PHONE STS	Maximum number and registered number of Samsung standard SIP Station. Samsung standard SIP Station means standard SIP Station produced by Samsung.
6	3RD SIP PHONE	Maximum number and registered number of Non-Samsung standard SIP Station. Non-Samsung standard SIP Station means standard SIP Station not produced by Samsung. License rates of Samsung standard SIP Station and Non-Samsung standard SIP Station are different.
7	FMC SIP PHONE	Maximum number and registered number of FMC SIP station. This is used for Mobile Office and without this license mobile phone such as Galaxy can't be connected to OfficeServ.
8	MVS SIP PHONE	Maximum number and registered number of MVS SIP station. This is used for Mobile Office and without this license mobile phone such as Galaxy can't be connected to OfficeServ.
9	MOBEX EXECUTIVE	Maximum number of the extension can use supplementary function among extension for MOBEX function. (This option may not be available in certain OfficeServ models.)

[207] ASSIGN VM/AA PORT

Enables SLI ports to be designated as NORMAL or VM/AA. VM/AA ports receive digits designated in MMC 726 (VM/AA Options) and also receive a true disconnect signal on completion of a call. Only SLI cards, not keyset daughter-boards, support disconnect signal. Do not make VM/AA ports data; this will return them to a single line port and stop voice mail integration. VM/AA ports have the equivalent of data protect written in the program and are protected against tones.

> **When using the MMC [207]**
>
> This MMC is not used to assign voice mail card ports. Voice mail card ports are assigned as voice mail ports automatically when the system detects an SVM-400 or SVMi-20 card or embedded VM.

DEFAULT DATA

NORMAL PORT

ACTION

1) Press Transfer button and enter 207.
   Display shows:

2) Dial station number. (e.g. 205)
   OR

[210] CUSTOMER ON/OFF PER TENANT

Allows the system administrator to set system features on a per-tenant basis. Each system option has a corresponding dialing number, as listed below. All options toggle ON/OFF.

No	Option	Default	Description
00	DISA PSWD	OFF	When ON, a caller must enter extension number and DISA password when they call a DISA trunk. When OFF, extension number and DISA password are not required and the caller has full access to all features allowed on this trunk.
01	LCR ENABLE	OFF	This option determines whether the system will or will not route outgoing calls based on the information in the LCR routing tables
03	PERI UCD RPT	OFF	Periodic UCD Information provider. Enables UCD Statistics data on a per-UCD group basis to print out on the IO port which has been set as PERI UCD in real time (every 3~99 seconds). This allows the information to be interfaced and manipulated by an external package or third party provided software.
04	CID CODE INS	OFF	When ON, the system will insert the country code when receiving CID information. This feature can use the CID display callback feature.
05	DISA MOH	OFF	When ON, outside parties will hear trunk MOH instead of dial tone from the time the system answers a DISA trunk until the caller dials a digit.
06	TRANSFER MOH	OFF	When ON, outside parties will hear trunk MOH instead of ringback tone from the time a transfer is completed until the call is answered by an internal party.
08	DID BSY ROUT	OFF	When ON, a DID call directed to a busy station will re-route to the destination in MMC 406 for that trunk, if CW is set to OFF in MMC 714. If the CW option is set to ON the call will camp on. When OFF and the CW option is set to OFF, the call will re-route to the operator.
09	ALARM MOH	ON	When ON, a station user answering an alarm ring will hear station MOH instead of dial tone.
10	ALL PICK UP	OFF	When ON, call can be picked up regardless of the pickup group by using MYGRPK feature code.
13	RECALL PIKUP	OFF	When ON, a call recalling to a station can be picked up using Direct Call Pickup, Pickup Group and My Group features. This applies to held calls recalling and transferred calls recalling to a station.
14	ICM EXT FWD	OFF	When ON, call forward external is allowed when intercom calls are placed to a station that has Call Forward External programmed and set.

(Continued)

No	Option	Default	Description
16	DID ERR TONE	OFF	This option provides error tone when an invalid DID number is received.
18	KTS DISC ALM	OFF	When ON, generates a system alarm when a phone disconnects or connects.
19	OFF HOOK ALM	OFF	When ON, generates a system alarm when a phone stays off-hook longer than this timer.
20	SL SELF RING	OFF	When ON, generates ring of 10 seconds when a single line phone dials itself and hangs up (self test).
21	SGR INC BUSY	OFF	When ON, generates busy tone when all station group members are busy for a group call. This does not work for station groups which have Unconditional Ring mode set.
24	TRSF CANCEL	OFF	When OFF, a single line phone can handle 2 calls simultaneously using the hook-flash to toggle between them. When ON, a single line phone can connect to the second call, but pressing the hook-flash will not toggle between the two calls it will disconnect the second call and reconnect the single line phone to the first call.
26	RECALL DISC	OFF	When ON, the system disconnects a transferred call when it recalls.
29	ARD TONE CHK	ON	When system detects CO BUSY TONE from Central Office, it returns to auto redial state.
30	VPN ENABLE	OFF	When ON, VPN is enabled. (Australia only.)
31	IN TOLL CHK	OFF	When OFF, the system doesn't toll restrict incoming calls.
32	ISDN PROGCON	OFF	When ON, if an outgoing call receives PROGRESS message from ISDN trunk, the call will connect without CONNECT message.
33	INCLUDE VAT	OFF	When ON, an 'Inclusive VAT of' line is printed on Hotel invoices (Hotel Application).
34	LCR DIALTONE	OFF	This option connects a dial tone different from extension dial tone when using LCR. When ON, a continuous tone, such as station dial tone, is generated.
36	DSS KEY DPU	OFF	When ON, pressing a DS key will pick up the call at a ringing station
37	BEGN DGT DSP	OFF	When ON, and an outside call is made via speed dial or LNR where more than 11 digits are dialed, then only the first 11 dialed digits are shown on the phone display.
38	ONE TCH FACC	OFF	When OFF, phone users cannot use one-touch account code (ACC) key.
39	SGR ALL OUT	OFF	When ON, the last remaining station group member can leave a group.

(Continued)

No	Option	Default	Description
40	CHAIN FWD	ON	If ON, an incoming call forwarded from a station to another station may then be forwarded to the mailbox of the second station, if the latter is set for 'forward to voice mail'. If this option is OFF, the call may only be forwarded to the mailbox of the first station.
41	TRK MONITER	OFF	If ON, the system will monitor the trunk supervision Signaling. That is, if a disconnection signal is received from the exchange, the call will be cleared and the extension will go back on hook.
42	VOIP MFRALOC	OFF	If ON, this allocates a DTMF receiver for a VOIP tandem caller breaking out on another trunk group.
43	NTWK AUTOTMR	OFF	If OFF, the call timer in the phone display will not function if the call is from a network connection (Q-SIG).
45	NO STAFF COD	OFF	When ON, the steps verifying the staff code will be omitted in Hotel operation.
46	PERI UCD SIO	OFF	When ON, the PERI UCD data will be sent to the SMDR IO port.
47	AUTO CLEANED	OFF	Normally, when a room is checked-out, the room status is changed to NEED CLEAN. When the option is set to ON, the room status will be changed to AVAILABLE instead. (Hotel Application.)
48	REDIAL REVW	OFF	When ON, the CALL LOG review will appear when the Redial or LNR button is pressed.
50	ISDN KEYFAC	OFF	If ON, allows Keypad Facility messages to be sent to the exchange to invoke network features.
52	CHK SPV TRK	OFF	When ON, if trunks don't have the supervision feature they cannot make outgoing transfers or unsupervised conferences.
53	PRE FWD BUSY	OFF	When ON, and a call arrives at a busy station that is not set for forward busy, if a preset no answer destination is available the call is re-routed to that destination.
54	ORG DIAL LOG	OFF	When ON, all dialed digits will be saved in the outgoing call log for Large LCD phones. When OFF, invalid dialing such as dialing of a non-existent station number will not be saved in the outgoing call log for Large LCD phones.
55	TIE TRSF RCL	ON	When ON, and a trunk call transferred to the tie line is not answered within the transfer recall time, the call is recalled to the original transferring station. (This option may not be available in certain OfficeServ models.)
56	VOIP REALRBT	OFF	When ON, the system will connect the real path of the outgoing trunk to the incoming VoIP trunk user instead of providing virtual ringback tone.

(Continued)

No	Option	Default	Description
58	CO-CO TM ALL	OFF	When ON, the system trunk call will be attached timer for prevent the call from locking up
60	SMDR LOG ALL	OFF	If the hotel feature is in admin/normal station mode and cost is '0', this option allows 'smdr record save'.
61	NO ITEM COST	OFF	If the hotel feature is in check-in mode, this option allows skipping item code and cost input.
62	SMDR AUT2ACC	OFF	When ON, the AUTHORIZATION CODE will be printed in ACCOUNT field of SMDR.
64	IPNW REAL RB	OFF	When ON, the system will connect the real path of the outgoing trunk to the VoIP networking trunk user instead of providing virtual ringback tone.
66	TRK AUTO MOH	OFF	When ON, an incoming trunk call is connected to MOH automatically after the DISA ANSWR timer (MMC 503) expires and the caller hears MOH. If the TRK AUTOMOH DISC timer in MMC501 expires before the call is answered, it is disconnected. (To use this feature, MMC 400 AUTO ANSWER option must set to ON.)
67	TRSF VT KEY	ON	When ON, works like the VT key when the user transfers the call to Voice Mail using the TRSF key.
68	PAIR NO RING	OFF	When ON, if a paired phone is busy the call camps on and a message waiting indication is set at the busy phone and does not ring the free paired extension.
69	DISA NO ACT	OFF	When ON, a DISA call will go to the station assigned in MMC 406 after the DISA NO ACT timer expires.
70	ICM AUTOHOLD	OFF	When ON, will allow internal calls to be put on hold automatically when another call is taken.
73	DTMF TO S0	OFF	When ON, this option allows sending DRMF to S0 extension.
74	STNHOLD PICK	OFF	When ON, this option allows a different extension to pick up intercom hold.
75	AREA DELETE	OFF	In a Phonebook outgoing call, this option allows deleting the area code and making the outgoing call.
76	ELCR DIALTON	OFF	In Second LCR operation, this option allows generating a different dial tone.
77	NET DTMF FWD	OFF	When ON, ext fwd is specified in SPnet when only the station port is captured and the dial tone is heard.
79	HOLD ID SEND	OFF	When ON, if hold a current call and make an external call, system sends caller id of held party as calling party number.
83	3.1K W/O HLC	OFF	When ON, an incoming call is dialed when the type of ISDN incoming call is 3.1K AUDIO type without HLC.
84	AOC CALLCOST	OFF	When ON, if hotel function is enabled, it costs about the ISDN line.

No	Option	Default	Description
85	CHKIN RESTRC	OFF	When ON, in case of hotel check-in, phone can be registered without entering phone deposit.
86	CHECK-IN FAC	OFF	When ON, in case of hotel check-in, the phone which is assigned can be set FAC mode.
91	ENHANCED FWD	OFF	When ON, if station 2001 receives an incoming trunk call and this call is forwarded to external destination, system follows stn-trk use option of station 2001.
92	TRK NAME USE	OFF	When ON, if making an outgoing call MMC404 trunk name is displayed on the phone.
93	NTWK TRK LMT	ON	When OFF, co confirm feature does not operate in case of SPNet outgoing call.

[221] TRAFFIC REPORT OPTION

This MMC is used to print a traffic report and select options. The traffic report can be printed on demand, or every hour, or at a programmed time each day, or for up to three separately-timed shifts. Automatic printing will always clear the totals.

When report MANUAL PRINT OUT is selected, the options are:

No	Option	Description
0	PRINT AND CLEAR	A report is printed and all totals are reset to 0.
1	PRINTOUT ONLY	A report is printed and all the totals are saved.
2	CANCEL PRINTOUT	Cancels printout.

When AUTO PRINT OPTN is selected, the options are:

No	Option	Description
0	AUTO PRINT OFF	Automatic print feature is disabled.
1	DAILY	A report is printed at a programmable time every day and all the totals are reset to '0'.
2	EVERY HOUR	A report will be printed every hour.
3	THREE TIME SHIFT	Up to three separate Start and End times may be programmed to report traffic within different shifts. A report is printed at the end of each End time and all totals are reset to '0'.

When a report is printed, the totals represent call statistics accumulated from the date of the last report stated as BEGINNING: D & T up to the date of this printout stated as ENDING D & T.

If there are no trunks in a group, the trunk group report for that group will not print.

CONDITIONS

If this function is required in an OfficeServ 7000 Series system with an MCP card, you must connect the LAN cable to the MCP card and be connected to a terminal supporting the TCP/IP function.

[222] EXTENSION TYPE

This MMC assigns station ports for a specific use. Each phone can be designated as one of five types (see table). These types can be changed by dialing the type number or by scrolling through the types and pressing the Right Soft button to select the type.

No	Type	Description
0	NORMAL STATION	This is the default setting. The station will operate in the normal manner associated with this type of station. Ports designated as VMAA in MMC 207 must be designated as normal in this MMC.
1	GUEST SMOKING	When a station is designated as this type it will appear in room status and check-in features as a smoking room.
2	GUEST NO SMOKING	When a station is designated as this type it will appear in room status and check-in features as a non-smoking room.
3	MEETING ROOM	Stations designated as Meeting Rooms will have the same attributes as guest rooms with regard to cleaning and occupied status but will not show up while scrolling through room status lists.
4	ADMINISTRATOR	Only stations designated as administrator stations can use Hotel features. (check in, etc.)
5	FAX STATION	When a station is designated as this type it can be assigned as a 'pair' station to a GUEST SMOKING ROOM or GUEST NO SMOKING ROOM in MMC 222.

CONDITIONS

This MMC can be used only when the Hotel function is enabled in MMC 813, HOTEL OPERATION.

[300] CUSTOMER ON/OFF PER STATION

Allows the following features to be enabled/disabled on a per-station basis.

No	Option	Default	Description
00	ACCESS DIAL	ON	Determines whether a user can select a trunk or trunk group by dialing its Directory Number (DN). This selection should be turned off when using LCR.
01	MICROPHONE	ON	Allows phones to be used in speakerphone mode.
02	OFF-HOOK RING	ON	Will allow a short burst of ring tone to indicate another call.
03	SMDR PRINT	ON	When the station is set for no Trunk Line calls to and from this station, the station will not print on SMDR. This includes transferred calls or calls picked up from hold or park.
04	TGR ADV.TONE	ON	When this feature is set to ON, a warning tone will be heard each time LCR advances to the next route.
05	VMAA FORWARD	ON	This feature selects whether Trunk Line calls can be forwarded to voice mail: ON, permits forward to voice mail; OFF, no forward to voice mail.
07	NGT PASSCODE	ON	When ON, the steps verifying the ring plan passcode will be added in Ring Plan change.
08	INTRCOM SMDR	OFF	When the station is set to OFF, the station will not print intercom calls on SMDR.
09	FWD DELAY USE	OFF	When ON, calls will overflow to the Forward No Answer destination when the Forward No Answer timer expires even when the Forward No Answer feature is not activated at the called party extension.
11	FORWARD OVRD	OFF	When set to ON and the station calls another station which has forwarding set, the call will not forward.
12	RECL TO OPER	OFF	When the station is set to ON, if the station transfers a call and the destination doesn't answer, the call will recall to the operator instead of the station.
13	SLT LP OPEN	OFF	When ON, SLI port receives real disconnect signal instead of busy or error tone. (VMAA or DATA ports always receive real disconnect signal.)
14	NO COST PRINT	OFF	When ON, if replacing the handset of a regular phone when no digit is pressed after hook flash, recall is carried out.
15	CID TO SLT	OFF	When a MIS card is installed and this option is set to ON, the system will provide the CID signal to SLTs.
22	NO RCL FLASH	OFF	When the hook switch is flashed or the flash key is pressed, a recall signal will not be sent to the system.
24	RBK STN NAME	OFF	When ON, display the name of the called party's extension, and not the message of 'the number is being called', in ring back mode when an extension call is originated.

(Continued)

No	Option	Default	Description
25	GLISTEN SPKR	OFF	When ON, the Group Listen function is executed by using the Speaker key.
28	FEATURE TONE	OFF	When the extension is set as 'ON' and a subscriber sets the extension function, a tone (message tone) different from dial tone will be heard. The relevant functions are DND, All Forward, Busy Forward, No Answer Forward, Follow Me and Station Lock functions. (This option is moved from MMC110.)
29	RADIOSTATION	OFF	When ON, SLT phone can act as radio station. (This option may not be available in certain OfficeServ models and countries.)

[305] ASSIGN FORCED CODE

This MMC allows one of the four options to be selected: the assignment of account codes with verification, account codes without verification and authorization codes (or none of these) on a per-station basis or on an all-station basis. The system supports 500 authorization codes and 999 account codes which may or may not require verification.

No	Type	Description
0	NONE	No Account or Authorization code required. (strictly voluntary)
1	AUTHORIZE CODE	Forces user to enter a valid Authorization code of four or more digits listed in the AUTHORIZATION CODE Table. (MMC 707)
2	ACCT VERIFIED	Forces user to enter a valid Account code listed in the ACCOUNT CODE Table. (MMC 708)
3	ACCT NO VERIFIED	Forces user to enter an Account code which is not verified. User can enter any code up to 12 digits. (including ∗ and #)

[314] CONFIRM OUTGOING CALL

Allows outgoing call restriction by call duration time: calls can be disconnected or the user can receive 'confirm tone'. (refer to the CO Confirm timer in MMC 501 and TRK LIM TM in MMC 502)

No	Type	Description
0	NONE	No action
1	CONFIRM TONE	Caller hears confirmation tone at programmed time
2	DISCONNECT	Call is disconnected.

CONDITIONS

- Outgoing call is restricted by call duration time which is the smallest value between CO Confirm time in MMC 501 and TRK LIM TM in MMC 502.

- Default value of TRK LIM TM in MMC 502 is 0 so in this case outgoing call can't be restricted. Change this value for confirming outgoing call.

- Confirm type of SPNet trunk can't be changed when NTWK TRK LMT in MMC 210 is set to OFF. In this case confirm type is fixed as 'NONE'.

DEFAULT DATA

[316] DISTINCTIVE RINGING

Specifies Ring Tone (T: RING TONE) and RING CADENCE (C: CADENCE) to identify from other rings when a call is received from a specific extension or trunk line.
In addition, this program can specify the priorities (PRI: PRIORITY) for each extension. This priority determines which call of waiting calls has connected first if any busy line becomes free when all member's lines of the called extension group are busy and several calls are waiting. (PRI: '1' has the highest priority.)

No.	Option	Description
0	DGP TONE	Specifies the ring tone of a digital phone (1-8).
1	SLT RING	Specifies the ring cadence of a regular phone (1-5).
2	PRIORITY	This option determines which call of waiting calls has the highest priority to be connected if a busy line becomes free when all members' lines of the called extension group are busy and several calls are waiting (1-9). PRIORITY 1 has the highest priority.
3	VM RBACK	Specifies the use of the coloring service by using a VMS message according to extensions (YES/NO).

CONDITIONS

• Digital phone identifies rings by using ring tone. If the 'T' of a calling party's extension/trunk line is specified as F-STN, ring is generated by Program 111 of the called party's extension. If specified as 1-8, the incoming ring is generated as the specified tone.

• Regular phones identify rings by using ring cadence. If the 'C' of a calling party's extension/trunk line is specified as F-STN, ring is generated according to the cadence of Program 510 depending on the type of the calling parties. If specified as 1-5, the type of calling parties is ignored and the following ring cadence is used:
At this time, the ring cadence is specified in Program 510.

DEFAULT DATA

T: F-STN
C: F-STN

ACTION

1) Press the Transfer button and 316.

2) Press an extension number or a trunk line number.
   (e.g. 202)
   Or, select the extension or trunk by pressing the
   Volume button and move the cursor by pressing the
   Right Soft button.

3) Enter a ring tone (**[0]**-**[8]**).
   (Press **[0]** to enter NO).
   Or, select the ring tone by pressing the Volume button
   and press the Right Soft button.

4) Enter a ring cadence (**[0]**-**[5]**).
   (Press **[0]** to enter NO).
   Or, press the Volume button to select the ring cadence
   and press the Right Soft button.

5) Enter a priority (**[0]**-**[9]**).
   (Press **[0]** to enter NO).
   Or, press the Volume button to select the ring cadence
   and press the Right Soft button.

6) Press the Transfer button to store the data and
   complete the procedure or press the Speaker button to
   store the data.

[328] MOBEX INFO

The system shall have virtual stations to serve the MOBEX function. This virtual station is called a MOBEX station. A MOBEX station shall be mapped to a MOBEX phone in a one-to-one relationship.

The trunks that can make a call to a MOBEX phone shall be limited to PRI/BRI and SIP trunks.

- MOBEX Number: The phone number of an external device, such as a mobile phone, to be ringing.

- MOBEX Phone: An external phone that has a MOBEX number.

- MOBEX User: A user of a MOBEX phone.

- MOBEX Station: A virtual station to which a MOBEX number is assigned.

- Master Station: A station that assigns a group of MOBEX stations to which a simultaneous call is to be made.

No.	Type	Description
0	TEL NUMBER	The phone number of an external device, such as a mobile phone, to be ringing. The length of value should be above 2 digit and be formatted with speed dial. The available trunk is ISDN/SIP trunk/trunk group/LCR number.
1	CLI NUMBER	The CLI of external MOBEX phone It is possible to input 0~9 number and maximum 16 letters
2	EXEC USER	Choose to use exclusive option or not (YES → FREE (Free resource): 0 LIC (License): 0)
3	MASTER STN	A station that assigns a group of MOBEX stations to which a simultaneous call is to be made.
4	SVC STATUS	Set MOBEX station to be active or not
5	MVS USER	Choose to use MVS option or not. (YES → FREE (Free resource): 0 LIC (License): 0)
6	CALLBACK	This option is for saving mobile phone charge. If it is set to enable, MOBEX user requests to system to call back. 1) MOBEX user dials MOBEX arrival number (MOBEX certification is needed.) 2) Current call is disconnected automatically after completing MOBEX certification. 3) After MOBILE CBK TIME in MMC 501, system makes a call to MOBEX phone for MOBEX callback. 4) MOBEX user answers callback call and then hears dial tone. If callback is failed, retry routing is started. (MOBILE CBK RETRY in MMC 500)
7	AA GOTO VM	If MOBEX executive or MVS user makes a call to VM, system connects him/her with mailbox of MOBEX master.

> **MMC [328]**
>
> - MOBEX extension number should be assigned in MMC 724 before MMC 328 setting.
>
> - This MMC may not be available in certain OfficeServ models.

ACTION

1) Press the Transfer button and 328.

2) Enter MOBEX station number.
   OR,
   press the Volume button to select a desired phone number and press the Right soft button to move the cursor.

3) Enter the desired number.
   OR
   Press Volume button to make selection and press Right Soft button to move cursor.

4) Press the Transfer button to complete the procedure or press the Speaker button to store the data.

Program 501	Set MOBILE CBK TIME.

[329] RING GROUP

Up to five stations shall be able to be assigned to a ring group. When a master station is ringing, the member stations of its ring group shall also be ringing simultaneously.

If a master station can not be ringing because the forward, DND, or Lock function etc. is enabled, its member stations shall also not be ringing. However, if the master station is unplugged, its member stations shall be ringing.

If an off hook ring occurs a master station due to a camp-on call which came in while it was busy, its member stations shall also be ringing. If no off hook ring is ringing, they shall not be ringing either.

If the forward all, DND, or Lock function is enabled in a member station, it shall not be ringing. However, if the forward busy or no answer function is enabled, this setting shall be ignored.

When a master or one of its member stations answers a call, other rings shall be cleared.

No.	Option	Description
0	GROUP MBR	Input ring group member up to five.
1	MOBEX BUSY	When it is enabled and MOBEX station is busy, ring group master is also busy. In this case ring group should have MOBEX station as its group member.

MMC [329]

MOBEX extension number cannot be assigned to Master of ring group.

NOTE

ACTION

1) Press the Transfer button and 329.

[400] CUSTOMER ON/OFF PER TRUNK

Assigns several options (listed below) on a per-trunk basis.

No	Option	Default	Description
00	1A2 EMULATION	OFF	When this option is set to ON up to 4 internal stations can participate in a conversation on this trunk by pressing the trunk key.
01	TRUNK INC DND	OFF	When this option is set to ON a trunk that is programmed to ring a specific station (a private line or DIL) will ring at that station if the station is in DND.
02	TRUNK FORWARD	ON	When this option is set to OFF this trunk will not follow a ringing stations call forwarding.
04	MOH/BGM USE	OFF	When this option is set to ON, MOH feature for 8TRK/8TRK2/16TRK/4TRM card is enabled.
06	EFWD EXT CLI	ON	This option determines what kinds of CLI number will be sent to the external forwarded outgoing call. (Station or Received CLI from Trunk)
07	REPEAT CLI	ON	This option determines what kinds of CLI number will be sent to the trunk to trunk call. (Trunk or Received CLI from Trunk)
08	TONECHK DISC	OFF	When this option is set to ON, loop trunk can be disconnected by detecting busy tone. (To use this feature, the LP TRK TONE DISC option in MMC 861 must be set to ENABLE.)
09	AUTO ANSWER	OFF	When this option is set to ON, Auto Answer mode can be assigned on a per-trunk basis.
10	COLORING AS	OFF	To provide coloring, and not ring back tone, a channel should be connected when a trunk line call is received. For a trunk line call that no channel is connected, this option determines if the coloring service is provided by sending the ANSBACK message.
12	TANDEM CLI	ON	When this option is set to ON, '0' is attached in front of the Caller ID received for a trunk line Tandem call.

[410] ASSIGN DISA TRUNK

Allows the system to have Direct Inward System Access (DISA). Because there is a possibility that unauthorized calls will be made via this feature, several safeguards have been added. Users must be informed of these to prevent unnecessary service calls. DISA can lock out when a predetermined number of invalid consecutive calls are attempted. Callers will then receive error tone until the programmable timer has expired.

CONDITIONS

- The ∗ key may be used to initiate new dial tone while in a station to station call.

- The # button may be used to terminate the DISA call and disconnect the central office line. DISA lines must be assigned to the ring plan(s).

[414] CID TRUNKS

Specifies an analog trunk line providing CID.

CONDITIONS

- Check if RCM, RCM2 or CRM option card is mounted on the LP40 (OfficeServ 7400)/MCP (OfficeServ 7200 does not support CRM) card of the OfficeServ system and before setting CLIP. (This MMC is not shown in OfficeServ 7100.)
- The trunk line should be the line that a phone service provider provides CID through.

DEFAULT DATA

NORMAL TRUNK

ACTION

1) Press the Transfer button and 414.

2) Enter the number of an analog loop trunk line.
(e.g. 702)
OR
Select a trunk line by pressing the Volume button and move the cursor by pressing the Right Soft button.
OR
Select all trunk lines by pressing the Message button (DS-24SE) or the ANS/RLS button (DS-4028E).

3) Enter **[1]** or **[0]** to specify if the trunk line provides CID or not.
OR
Select if the CID is provided by using the Volume button and move the cursor by pressing the Right Soft button.

4) Press the Transfer button to store the data and complete the procedure or press the Speaker button to store the data.

MMC 725   SMDR OPTIONS

[416] ASSIGN E & M/DID RINGDOWN

This MMC defines which ring destination table an E & M or DID trunk will follow for incoming calls. There are three options for each trunk as defined below.

No	Option	Description
0	FOLLOW INCOM DGT	When a trunk is set to this option, calls will ring at the destination that matches the digits received from the Trunk line.
1	FOLLOW DID TRANS	When a trunk is set to this option, calls will ring at the destination defined in MMC 714 that matches the digits received from the TRUNK LINE.
2	FOLLOW TRK RING	If this option is selected, press the Right Soft button and 'NO. RCV DIGIT' will appear on the display. Here is where the number of incoming digits from Trunk Line must be entered (0-4). When a trunk is set to this option, calls will ring at the destination defined in MMC 406 for that trunk. If the destination defined in MMC 406 is a VMAA port or group then the system will repeat the digits received from the CO to the port when it answers.

CONDITIONS

R2MFC trunk lines only support the 'FOLLOW INCOM DGT' and 'FOLLOW DID TRANS' options.

MMC [413]

This program may not be available in certain OfficeServ models.

MMC 406   TRUNK RING ASSIGNMENT

[420] MPD/PRS SIGNAL

Used on a per-trunk basis to define if a Trunk line is to be either a Metering Pulse Detection (MPD) or a Polarity Reversal Signal (PRS) trunk.

An MPD Trunk will detect a C.O-provided meter pulse. A Polarity Reversal trunk will detect the line reversal signal which may be provided by the Trunk Line when the other party answers the outgoing call or the outside party clears the call.

Type	Description
PRS 1	When first PRS is detected, call duration timer is started. When second PRS is detected, call duration timer is stopped. The call is not released.
PRS 2	When first PRS is detected, call duration timer is started. When second PRS is detected, call duration timer is stopped and the call is released.
PRS 3	The call duration timer starts based on the timer. When first PRS is detected, call duration timer is stopped and call is released.
MPD	Metering Pulse Detection.
NONE	No MPD/PRS service.

CONDITIONS

- If the trunk is designated as PRS, the call duration timer will be started and the results printed on the SMDR record.
- PRS is also essential for dropping a trunk-to- trunk conversation which is unsupervised by an internal party.
- This option may not be available in certain countries.

DEFAULT DATA

NONE (NORMAL)

ACTION	**DISPLAY**
1) Press Transfer button and enter 420. Display shows:	`[701] TRK PRS` `NONE`
2) Dial desired trunk number. (e.g. 705) OR Press Volume button to select trunk and use Right Soft button to move cursor.	`[705] TRK PRS` `NONE`
3) Dial 0 for PRS 1, 1 for PRS 2, 2 for PRS 3, 3 for MPD or 4 for NORMAL. OR Press Volume button to scroll through options and use Left or Right Soft button to return to step 2.	`[705] TRK PRS` `PRS 2`

[427] PRI OPTIONS

This MMC allows the technician to program a PRI trunk card.

No	Option	Description
0	CHANNEL ANY	When this option is set to YES, the system will place calls on any free channel of that PRI if the channel chosen by the user is busy. If set to NO, they will receive a busy signal if they attempt to access a busy channel even if the other channel on that PRI is free.
1	PRI MODE	PRI access mode select.
	NORMAL	Point to Point NORMAL. This operates like a standard telephone line with one CO number per channel and ring according to MMC 406.
	DID	Point to Point Direct Inward Dial. This operates in a similar manner to an analogue DID circuit with multiple CO numbers pointed to a single channel and translated within the system (MMC 714) to a single device.
2	DLSEND	PRI dial sending mode select.
	ENBLOCK	Digits will be collected and sent in a single block similar to a cellphone.
	OVERLAP	Digits will be sent as they are dialed by the user.
3	CLIP TABLE	Used to select the Calling Party Number to send to the network. If NONE, MMC 405 CO TRUNK NUMBER is sent to the network; otherwise, the Calling Party Number entry in MMC 323 corresponding with the selected number is sent to the network.
4	NB TYPE	Used to select the type of the Calling Party Number to send to the network.
	UNKNOWN	Unknown number
	INT.NAT	International number
	NATIONAL	National number
	NETWORK	Network specific number
	SUBSCRIB	Subscriber number
	ABBREV	Abbreviated number
	EXTEN	Local number
5	NB PLAN	Used to select the type of the Calling Party Number Plan to send to the network.
	UNKNOWN	Unknown numbering plan
	ISDN	ISDN numbering plan (CCITT E.163-164)
	DATA	Data numbering plan (CCITT X.121)
	TELEX	Telex numbering plan (CCITT F.69)
	NATIONAL	National standard numbering plan
	PRIVATE	Private numbering plan
	EXTEN	Local numbering plan

(Continued)

No	Option	Description
6	CLIR w NUMB	When this option is set to ON, CLIP numbers are transmitted to the network even though CLIP Restriction is set. 0. OFF 1. ON
8	ECT SERVICE	Specifies the ISDN explicit call transfer option as follows: 0. NONE 1. REQ 2. RCV 3. BOTH (This option may not be available in certain OfficeServ system.)
10	EFWD REROUT	If the option is set to ON, the rerouting message can be sent as FACILITY type. This option is available only in Russia.
11	SAME CONNID	When this option is set to OFF, ISDN port is searched by CONN ID and if set to ON, searched by data channel id.
13	CD PLAN	Specifies the called party's numbering plan as follows: 0. UNKNOWN 1. ISDN 2. NATION (This option may not be available in certain OfficeServ system.)
14	CD TYPE	Specifies the calling party's number type as follows: 0. UNKNOWN 1. INT. NAT 2. NATIONAL 3. NETWORK 4. SUBSCRIB 5. ABBREV 6. EXTEN (This option may not be available in certain OfficeServ system.)
15	TIME SYNC	Determines the automatic update of the system time by the use of ISDN Calls. When this option is set to ON, the system time is updated if a correct time value is transmitted from the trunk line.
17	CENTREX	When ISDN trunk has centrex feature, MMC 210 ISDN PROGCON is set to OFF and the 2nd progress message is incoming, dialed digit can be sent as ISDN message type. If the option is set to OFF, dialed digit is sent as DTMF type.

CONDITIONS

- Before setting the PRI program, the J2 jumper of the TEPRI or TEPRI2 card must be set to 'ON' for PRI mode.

- After changing this program, run MMC 418, BRI AND PRI CARD RESTART, to apply the new setting.

- This MMC is not available in OfficeServ 7030 which doesn't support PRI service.

[428] BRI OPTIONS

Assigns several options on a per-BRI basis. There are different options depending on whether the BRI is programmed as a trunk or station in MMC 423.

OPTIONS FOR BRI PORTS PROGRAMMED AS TRUNKS

No	Option	Description
0	CHANNEL ANY	When this option is set to YES, the system will place calls on any free channel of that BRI if the channel chosen by the user is busy. If set to NO, they will receive a busy signal if they attempt to access a busy channel even if the other channel on that BRI is free.
1	BRI MODE	BRI access mode select.
	P-P NOR	Point to Point NORmal. This operates like a standard telephone line with one CO number per channel and ring according to MMC 406.
	P-P DID	Point to Point Direct Inward Dial. This operates in a similar manner to an analogue DID circuit with multiple CO numbers pointed to a single channel and translated within the system (MMC 714) to a single device.
	P-M NOR	Point to Multi-point NORmal. This type of circuit operates in a similar manner to P-P NORmal but allows multiple devices to be attached to the circuit. Ringing is defined in MMC 406.
	P-M MSN	Point to Multi-point MSN. This setting is used when the line uses the MSN supplementary service. Ringing is defined in MMC 421.
2	DLSEND	BRI dial sending mode select.
	ENBLOCK	Digits will be collected and sent in a single block similar to a Cellphone.
	OVERLAP	Digits will be sent as they are dialed by the user.
3	CLIP TABLE	Used to select the Calling Party Number to send to the network. If NONE, MMC 405 TRUNK CO TEL NUMBER is sent to the network; otherwise, the Calling Party Number entry in MMC 323 corresponding with the selected number is sent to the network.
4	NB TYPE	Used to select the type of the Calling Party Number to send to the network.
	UNKNOWN	Unknown number
	INT.NAT	International number
	NATIONAL	National number
	NETWORK	Network specific number
	SUBSCRIB	Subscriber number
	ABBREV	Abbreviated number
	EXTEN	Local number

(Continued)

No	Option	Description
5	NB PLAN	Used to select the type of the Calling Party Number Plan to send to the network.
	UNKNOWN	Unknown numbering plan
	ISDN	ISDN numbering plan (CCITT E.163-164)
	DATA	Data numbering plan (CCITT X.121)
	TELEX	Telex numbering plan (CCITT F.69)
	NATIONAL	National standard numbering plan
	PRIVATE	Private numbering plan
	EXTEN	Local numbering plan
6	CLIR w NUMB	In case of CLIR, the flag can be set to OFF and the CLI number can be send.
8	ECT SERVICE	Specifies the ISDN explicit call transfer option as follows: 0. NONE 1. REQ 2. RCV 3. BOTH (This option may not be available in certain OfficeServ system.)
10	EFWD REROUT	If the option is set to ON, the rerouting message can be sent as FACILITY type. This option is available only in Russia.
12	NO CH BUSY	If bri line is not available, this line can be set to be busy.
13	CD PLAN	Specifies the called party's numbering plan as follows: 0. UNKNOWN 1. ISDN 2. NATION (This option may not be available in certain OfficeServ system.)
14	CD TYPE	Specifies the calling party's number type as follows: 0. UNKNOWN 1. INT. NAT 2. NATIONAL 3. NETWORK 4. SUBSCRIB 5. ABBREV 6. EXTEN (This option may not be available in certain OfficeServ system.)
15	TIME SYNC	The time information of system can be updated automatically by BRI incoming call.
17	CENTREX	When ISDN trunk has centrex feature, MMC 210 ISDN PROGCON is set to OFF and the 2nd progress message is incoming, dialed digit can be sent as ISDN message type. If the option is set to OFF, dialed digit is sent as DTMF type.

OPTIONS FOR BRI PORTS PROGRAMMED AS STATIONS

No	Option	Description
0	ANY CHANNEL	When this option is set to YES, the system will place calls on any free channel of that BRI if the channel chosen by the user is busy. (e.g. Preferred channel selection) If set to NO, the user will receive a busy signal if they attempt to access a busy channel even if the other channel on that BRI is free. (e.g. Exclusive channel selection)
1	POWER FEED	This field determines if power to a BRI access will be supplied. (YES or NO)
2	ECT SERVICE	Specifies the ISDN explicit call transfer option as follows: 0. NONE 1. REQ 2. RCV 3. BOTH (This option may not be available in certain OfficeServ system.)

CONDITIONS

- A BRI card must be installed in the system. Or, the 'NO BRI CARD' message is displayed.
- If any changes are made in this MMC, the BRI card that is affected by these changes MUST be restarted using MMC 418 in order for the changes to become effective.

MMC 421	MSN DIGIT
MMC 423	S/T MODE
MMC 714	DID NAME AND NUMBER TRANSLATION

[429] MSN DIGIT

Provides a method of assigning an incoming MSN call to a specific station. If any entry in the MSN DIGIT TABLE matches an incoming call's called party number, either the specific station is alerted, if it is programmed to accept the call, or the call is cleared if it is programmed to reject the call.

If the incoming called party number does not have a matching entry in the MSN table, MMC 406 ringing destination is alerted or the call is optionally released.

You can give each MSN number to a specific station and you can select the call waiting option: when a destination is busy, the incoming call must be cleared or camped-on to the station. (which is alerted to the call)

CONDITIONS

- A BRI card must be installed in the system. Or, the 'NO BRI CARD' message is displayed.
- For each BRI access, two adjacent ports are assigned. You need only change the value for one of the two ports; the value for the other port will be changed automatically.

DEFAULT DATA

1-6: NONE
CW: YES
OPT: ACCEPT

ACTION

1) Press Transfer button and enter 429.
   Display shows:

[433] COST RATE

In this MMC, the TRUNK COST RATE flags are entered for each trunk. DIAL PLANs are defined in MMC 748 (Costing Dial Plan). RATE CALCULATION TABLES are defined in MMC 749. Each trunk may be defined with up to eight cost rates. Enter one or more of the eight COST RATES per trunk. If an entry is left blank, no call costing will be calculated for that particular DIAL PLAN.

Call type 8 is fixed for incoming calls. Select cost rate type 8 only if you want incoming call costing for a trunk.

DEFAULT DATA

[434] CONNECTION STATUS

This read-only MMC will confirm the connection status of stations or trunks.
Display status displays the status of a station or trunk at the time requested. If a conference is in progress with the selected trunk or station, the display will show one of the conference parties and an arrow (→). The technician or system administrator can then display the other parties in the conference. If a station or trunk is in an idle state, the display will show 'IDLE'. If the station or trunk selected is not a valid selection, the display will show 'INVALID DATA'. If the station or trunk is made busy by the CPU, the display will show 'MADE BUSY'. If the station is in busy state with no other connection, the display will show 'BUSY' only. If the station gets MPS, CNF or RTG, the display will show (-) and 'MPS', 'CNF' or 'RTG'.

[500] SYSTEM-WIDE COUNTERS

Used to set the values of the system counters. The counters are listed below with a brief description of each.

No	Counter	Default	Description
00	ALARM REM. CNTER	5	The number of times that an alarm reminder will ring a station before cancelling. RANGE = 1-99.
01	AUTO RDL COUNTER	5	The number of times the system will redial an outside number after the auto redial feature has been activated. RANGE = 1-99.
02	DISA CALL CNTER	99	Sets the maximum number of intercom calls that can be made after accessing a DISA line. RANGE = 1-99.
03	DISA LOCK CNTER	3	Number of attempts the system will allow to incorrectly access a DISA line before locking out the DISA line. RANGE = -99
04	NEW CALL COUNTER	99	Number of times the system will allow a user to signal New Call on a Trunk line during one call. RANGE = 1-99.
05	UCDS VISUAL ALARM	0	Used to set the Visual alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0-25.
06	UCDS AUDIO ALARM	0	Used to set the Audio alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0-25.
07	UCD CS LEVEL 1	0	Provides call wait indication level 1 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0-25.
08	UCD CS LEVEL 2	0	Provides call wait indication level 2 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0-25.
09	SMDR OWRITE CNTR	99	Number of times the system will overwrite SMDR data to SD card. (SMDR Buffering) (This option may not be available in certain OfficeServ models.)
10	MOBILE CBK RETRY	0	Number of times the system will retry to make a callback call to MOBEX user.

[501] SYSTEM TIMERS

Allows the technician to adjust individual timers as necessary.

TIMER TABLE

Timer Name	Default	Range Unit	Description
AA INT DGT TIME	05	1~25 SEC	Inter-digit time (This option may not be available in certain OfficeServ models.)
AA NO ACT TIME	10	1~25 SEC	Time for AA to transfer the incoming call to operator in case of no digit input within the specified time limit. (This option may not be available in certain OfficeServ models.)
AA TRANS TIME	02	0~25 SEC	This is latency time before AA tranfer inbound call to another recipient. (This option may not be available in certain OfficeServ models.)
ALARM TIME	100	0-2500 MIN	This is the time the system alarm key will start ringing after the alarm key has been silenced.
ALERT TONE TIME	1000	100-2500 MSEC	This timer sets the duration of the attention tone preceding a call to a phone in the Voice Announce or Auto Answer mode. This tone will also precede a forced Auto Answer call.
ALM REM.INTERVAL	25	1-250 SEC	This timer controls the time between ring attempts at a station when alarm reminder is set.
ALM REM RING OFF	10	1-25 SEC	This timer controls the length of the ring cycle duration when an alarm reminder is set at a station.
ATT. RECALL TIME	30	0-250 SEC	This controls how long a transfer recall will ring at a station before recalling the operator.
AUTO REDIAL INT.	30	1-250 SEC	This timer controls the time between attempts after RETRY dialing is set on a station.
AUTO REDIAL RLS.	45	1-250 SEC	This timer controls the duration of a Ring No Answer condition on a retry number dialed before the auto redial is automatically cancelled.
BOOTH TIME OUT (Hotel application only)	005	0-250 MIN	Controls the time for which a booth phone is enabled.
CALLBACK NO ANS	30	1-250 SEC	This timer controls the time before the callback is automatically cancelled when a callback detects Ring No Answer.

(Continued)

Timer Name	Default	Range Unit	Description
CAMP ON RECALL	30	0-250 SEC	This timer controls the time a camped-on call will stay at a destination before recalling to the transferring station.
CID MSG RECEIVE	6	1-25 SEC	The amount of time that the system will allow a valid message from the analogue CID trunk.
CID DSP ALLOC TM	500	000-500 MSEC	Caller ID (CLI) Digital Signal Processor Allocation timer-the length of time the DSP is in-circuit to decode analogue Caller ID. (This option may not be available in certain OfficeServ models.)
CLI DISPLAY TIME	5	1-25 SEC	The amount of time that the Caller ID information remains on the phone's display.
CO CONFIRM TIME	3	0-250 MIN	According to MMC 314 CO CONFIRM type, the outgoing call will be disconnected or the outgoing caller will hear the confirm tone after call duration time which is the smallest value between this CO CONFIRM time and TRK LIM TM in MMC 502.
CO-CO DISCONNECT	20	1-250 MIN	This timer monitors the duration of an unsupervised conference; when it expires, both trunks are disconnected.
CONFIRM TONE TM	1000	100-2500 MSEC	The tone heard when a feature is activated or deactivated.
CRD TONE INT TM	30	0-250 SEC	This is the call record tone interval time. An entry other than zero will cause a tone to be heard by all the parties in a recorded conversation. The range for the tone is 001 (every second) to 255 (every 255 seconds). A value of 000 means no tone. Requires an SVMi card.
DIAL PASS TIME	3	0-25 SEC	This timer monitors the time before connecting the transmit of the phone to the trunk side of an outgoing call.
DISA DISCONNECT	30	1-250 MIN	This timer controls the maximum duration of a DISA call.
DISA LOCK OUT TM	30	1-250 MIN	This timer controls how long a DISA call is not allowed to be made after the DISA error counter has expired (MMC 500).
DISA NOANS DISC.	30	0-250 SEC	This timer determines when a DISA call is disconnected by force when a called party does not answer.
DISA PASS CHECK	30	1-250 MIN	This timer defines the period before the system clears the incorrect passcode counter.

(Continued)

Timer Name	Default	Range Unit	Description
DISA NO ACTION	10	0-250 SEC	This timer controls how long a DISA line will wait for further action from the caller.
DISPLAY DELAY TM	3	1-250 SEC	This timer controls how long a display is shown in the LCD and how long error tone is heard.
DOOR LOCK RELES.	500	100-2500 MSEC	This timer controls how long the door lock relay will be activated.
DOOR RING DETECT	50	10-250 MSEC	This timer controls the time before a call is answered by the door phone.
DOOR RING OFF TM	30	1-250 SEC	This timer controls the duration of ringing at the door ring destination before automatically cancelling.
E-HOLD RECALL TM	45	0-250 SEC	This timer controls how long a call is held exclusively at a station before recalling.
FIRST DIGIT TIME	10	1-250 SEC	This timer controls how long the system will wait for dialing to begin before dropping the dial tone and returning the you to error tone.
HOK FLASH MAX TM	120	20-2500 MSEC	This timer monitors the duration of a hook-switch flash to ensure that the flash is valid and not a line noise or an accidental hookswitch bounce LONGEST duration.
HOK FLASH MIN TM	70	20-2500 MSEC	This timer monitors the duration of a hook switch flash to ensure that the flash is valid and not a line noise or an accidental hook switch bounce SHORTEST duration.
HOOK OFF TIME	100	20-2500 MSEC	This timer controls the time before dial tone is sent to a single line station.
HOOK ON TIME	200	20-2500 MSEC	This timer sets the minimum amount of time that the system will recognize as an SLT hang up.
INQUIRY RELEASE	30	1-250 SEC	This timer monitors the duration of the interaction of the Soft button to determine when to return the LCD back to a normal status. This timer affects only display phones.
INTER DIGIT TIME	10	1-250 SEC	This timer controls the grace period between dialing valid digits before dropping the call and returning you back to error tone.
ISDN INT DGT TM	7	1-15 SEC	This timer controls the grace period between dialing valid digits and the end of the dialing string on an ISDN call.

(Continued)

Timer Name	Default	Range Unit	Description
KMMC LOCK OUT TM	30	10-50 SEC	This timer controls the grace period between programming actions while in a programming session. The timer automatically returns the system to secure programming status.
LCR ADVANCE TIME	5	1-250 SEC	This timer controls the time before selecting the next allowable route when a station is allowed to route advance.
LCR INTER DIGIT	5	1-250 SEC	This timer controls the grace period between dialing valid digits before accessing a trunk.
LONG KEY DETECT	600	0-2500 MSEC	This timer controls the time a key must be held down before the key press is repeated.
LONG KEY REPEAT	300	0-2500 MSEC	This timer controls the time between repeated digits on a long key press.
MM CONF REC TIME	30	20-60 SEC	This timer controls the duration of who am I recording for CNF24 Meet-Me conference. (This option may not be available in certain OfficeServ models.)
MOBILE CBK TIME	5	3-20 SEC	This timer controls how long the system will wait for making callback call to MOBEX user.
MOVE WAIT TIME	20	0-250 SEC	This timer controls how long the system will wait for moving currenct call from desk phone to mobile phone or mobile phone to desk phone.
MS LED ON TIME	5	1-10 SEC	This timer controls the duration a Manual Signaling key will remain on after use.
OFF HOOK RING INT	15	1-250 SEC	This timer controls the time between ring bursts to a user who has a camped-on call.
OHVA ANSWER TIME	10	1-250 SEC	This timer controls the time allowed to answer an OHVA call before automatic rejection.
PAGE TIME OUT	20	1-250 SEC	This timer controls the duration of a page announcement.
PAGE TONE TIME	500	100-2500 MSEC	This timer controls the duration of tone burst heard over the page prior to the page announcement.
PARK RECALL TIME	45	0-250 SEC	This timer controls how long a call is parked before recalling to the call park originator.
AP-MMC LOCK TIME	5	1-60 MIN	This timer monitors the PCMMC/WebMMC/Installer activity, drops the link if no action is created by PCMMC and returns the system back to secure program status.
PERI UCD REPORT	5	3-99 SEC	This timer determines the interval between periodic UCD reports provided to an SIO port.

Timer Name	Default	Range Unit	Description
POWER DOWN TIME	2000	500-9900 MSEC	This timer monitors the power to the ROM pack to begin shutdown status.
R2MFC INCOM TIME	20	10-30 SEC	This timer controls the incoming time of R2MFC. (This option may not be available in certain countries.)
R2MFC INTER TIME	0	20-70 MSEC	This timer controls the interval time of R2MFC. (This option may not be available in certain countries.)
R2MFC OUTGO TIME	15	10-30 SEC	This timer controls the outgoing time of R2MFC. (This option may not be available in certain countries.)
RECALL DISCONNECT	2	1-250 MIN	This is the time an attendant recall will ring before being disconnected.
RECALL WAIT TIME	15	0-250 SEC	This is the time any recall (hold or transfer) continues to recall at your station before it recalls to the operator.
ROUTE OPTIMISE	5	0-250 SEC	When a call is made via Q-SIG Signaling, route optimization is activated after this time.
SIPT CONDELAY TM	200	0-1000 MS	When the called party answers the current call, system sends connection response message after this time.
SMDR BACKUP INTV	10	5-30 MIN	System repeats to overwrite SMDR data to SD card by this interval time.
SMDR START/DP	30	1-250 SEC	This grace period timer starts SMDR recording for rotary dialing.
SMDR START/DTMF	15	1-250 SEC	This grace period timer starts SMDR recording for touchtone dialing. This timer also controls the LCD duration timer on the phones. The duration time displayed and the SMDR time duration will be the same.
SYS HOLD RECALL	45	0-250 SEC	This timer determines the time calls can be left on hold before recalling to the holding station. This is a system-wide timer. Setting the timer to 000 means that no recalling will take place.
TRANSFER RECALL	20	0-250 SEC	This timer determines how long transferred calls ring before recalling. This is a system-wide timer.

(Continued)

Timer Name	Default	Range Unit	Description
TRK AUTOMOH DISC	60	1-250 SEC	When set to ON, incoming trunk calls are connected to MOH automatically after the DISA ANSWR timer (MMC 503) expires. In this case the caller hears MOH. If the TRK AUTOMOH DISC timer expires before the call is answered, the call is disconnected.
TSW CONN. DELAY	0	0-10 SEC	When an incoming trunk makes an outgoing call to another trunk, the system connects the voice path after this time.
UCDS AUDIO ALARM	0	0-990 SEC	When an SVMi-20 card is installed and the digital UCD package enabled, this counter determines the maximum number of seconds a call has been waiting at the UCD group before the UCD group's SUPV key begins to flash along with an audio alarm. For more UCD alarm conditions, see MMC 500.
UCDS VISUAL ALARM	0	0-250 SEC	When an SVMi-20 card is installed and the digital UCD package enabled, this counter determines the maximum number of seconds a call at the UCD group before the UCD group's SUPV key begins to flash as an alarm. For more UCD alarm conditions, see MMC 500.
UNREGIm FWD TIME	5	3-25 SEC	When user makes a call to unregistered FMC phone, system forwards current call to unregistered destination after this time.
VM RBK DELAY TM	0	0-250 SEC	In case of an incoming call, the answer time for VM ring back tone is delayed
VOIP RE-ROUTE TM	15	0-25 SEC	If an outgoing call made via a VoIP trunk does not receive an acknowledgement message from the called party within this time, the call is treated as failed.

When timers value is '0'

Some timers are disabled when their value is set to '0'.

[502] STATION-WIDE TIMERS

Allows certain station timer values to be changed on a per-station basis or for all stations.

No	Item	Description
0	NO ANS FWD	This timer controls how long the station will ring before Forward on No Answer takes place. (1-250 sec)
1	DTMF DUR.	This timer governs the duration of DTMF digits which are transmitted to an external VMS system port. This can be used when a VMS system fails to recognise the default DTMF digit duration being transmitted from the SLT port. (100-9900 ms)
2	F-DGT DELY	This timer will be valuable for the system administrator to insert a suitable delay before generating DTMF digits for In-Band integration. (100-9900 ms)
3	OFFHK SEL.	This timer controls the grace period before placing an internal/external call as programmed in MMC 306. (0-250 sec)
4	EFWD DELAY	This timer controls the External Call Forward feature which will allow a station to ring before the call is placed on external call forwarding. (1-250 sec)
5	CC RNG DLY	If a station does not answer an incoming call within this time, other stations with a CC key for that station will ring.
6	PING RING	This timer let the members of pickup group listen ping ring just one time. If this value is 0, this function will not operate. And to allow this function, the PINGRING SERVICE has to be enabled in MMC861. (0~250 sec)
7	TRK LIM TM	According to MMC 314 CO CONFIRM type, the outgoing call will be disconnected or the outgoing caller will hear the confirm tone after call duration time which is the smallest value between this TRK LIM TM and CO CONFIRM TIME in MMC 501.

[503] TRUNK-WIDE TIMERS

Allows certain trunk timer values to be changed on a per-trunk basis or for all trunks.

No	Item	Description	Range
00	ANS.BAK TM	ANSWER BACK TIME. This timer is used for certain types of E & M Signaling and does not affect normal CO lines.	0-2500 MSEC
01	CLEARING	This timer ensures that a call is fully disconnected at the CO by preventing CO access outgoing or receiving incoming ring between a disconnect and the expiration of this timer.	100-9900 MSEC
02	CO SUPV TM	CO SUPERVISION TIME. this is the minimum length of loop open disconnect received from the CO that will be seen as a valid hang up on the system.	10-2500 MSEC
03	DTMF DUR.	DTMF DURATION. This is the length of the DTMF digits that will be sent to the CO on this line.	100-9900 MSEC
04	F-DGT DELY	First-DIGIT DELAY. This is the length of time the system will wait for CO line conditions to stabilize after seizure before sending DTMF digits.	100-9900 MSEC
05	FLASH TIME	This is the duration of the momentary open sent on a circuit when FLASH key is pressed.	20-2500 MSEC
06	NO RING TM	This is the length of time the system will wait after detecting a ring burst on a line before deciding the call has disconnected.	1-25 SEC
07	PAUSE TIME	This is the length of time the system will wait before sending the next digit for a pause in a speed dial bin.	1-25 SEC
08	PRS DET TM	This means the duration of PRS signal pulse. If the PRS signal is reversed when opposite party is answered and maintain the status before the opposite party disconnect the call, the PRS DET TM must be set to 0.	0-2500 MSEC
09	RNG DET TM	RING DETECT TIME. This is the minimum length of ring signal the system will regard as a valid ring.	10-2500 MSEC
10	WINK TIME	This is the duration of the acknowledgment signal that the system will send on an E & M circuit	100-300 MSEC
11	MF/DP INT	This is the interval between sending digit. In case of DTMF signal, over the 500ms will be serviced as 100 ms.	100-9900 MSEC
12	MFR DLY TM	This is a delay time to allocate the MFR after incoming trunk is detected. This is to prevent the wrong detection of DTMF signal by noise.	0-25 SEC
13	DISA ANSWR	This is a delay time to answer the DISA trunk call or to answer the trunk when TRK AUTO ANSWER is set to ON (MMC400).	0-9 SEC

(Continued)

No	Item	Description	Range
14	CONN DELAY	This is the delay time to connect a voice path when users make outgoing calls via a loop trunk. This is to prevent users hearing noise when the loop trunk is seized.	0-2500 MSEC

[507] ASSIGN RING PLAN TIME

Use this MMC to program Ring Plans time settings. Ring Plans provide six separate ringing destinations based on day of the week and time of day. The start time within a plan is the time the system will switch from one ringing destination to the next.
The end time is the time the system will switch from that plan to the previous plan.

An RPO (Ring Plan Override) button is not needed as the system will switch automatically; however, it is helpful to have a dedicated button so the status can be manually changed if needed. If a ring plan has no time entry the ring plan defaults to ring plan 1.
The ring plans correlate with all MMCs that program ring or termination destinations and station and trunk COS.

The following example may be useful when assigning ring plan times:

RING PLAN	Start Time	End Time
(MON: 1)	ST: 0000	END: 23:59
(MON: 2)	ST: 0800	END: 2200
(MON: 3)	ST: 1000	END: 2000
(MON: 4)	ST: 1200	END: 1800
(MON: 5)	ST: 1300	END: 1600
(MON: 6)	ST: 1400	END: 1500

Using a 24-hour clock in the example above, notice that the END time is within the same 24-hour period as the START time. The system will stay in the last active Ring Plan from the previous day until the end time which is 23:59. Monday starts Ring Plan 1 at 00:00. The system will stay in Ring Plan 1 until Ring Plan 2 starts (08:00) and will stay in Ring Plan 2 until Ring Plan 3 starts (10:00), and so on. As each ring Plan start it will override the previous Ring Plan.

If a Ring Plan expires and there are no additional Ring Plans set, the system will default to the Ring Plan with a time that extends past the expired Ring Plan time.

CONDITIONS

- When using a Samsung built-in Voice Mail card that only has day/night mode, the day/night must be set for each RING PLAN in MMC 758, VM DAY/NIGHT.

- Ring Plans must be programmed in sequence. (RP 1, 2, 3, 4, etc.) A Ring Plan cannot be omitted. (i.e. you cannot program RP 1, 2, 5, etc.)

- A higher numbered Ring Plan cannot have a START time which begins before a lower numbered Ring Plan.

> ![NOTE]
>
> **Ring Plan 1**
> Ring Plan 1 is the default Ring Plan for each day. If no Ring Plan destination is entered, the operator group is the default destination.

[508] CALL COST

Set the Call Cost attributes generated by the system during a call. This information can be displayed on the phone during a call or as an SMDR record.

No	Display	Description
0	UNIT COST PER MP	When the system is installed to receive metering pulses on a C. O. outgoing call. It is used for generating total call cost by multiplying it by the number of pulses. Allows a maximum value of 9999. (Currency is PENCE or ECENTS depending on USE EURO option setting in MMC 210.)
1	CALL COST RATE	This generates additional call cost calculated by multiplying this rate by the original call cost. Ranges from 100 to 255.

⚠️ **CAUTION**

CALL COST

Changing this value when there is a call in progress may result in an inaccurate call cost. This MPD facility requires the Meter Pulse Detection version of the trunk card.

DEFAULT DATA

UNIT COST PER MP: 0200 PENCE, CALL COST RATE: 100 PERCENT

ACTION

1) Press Transfer button and enter 508.

[511] MSG WAITING LAMP CADENCE

This MMC defines the cadence (flash rate) of single line telephone message waiting lamps on phones connected to systems with an MWSLI card. There are two choices for the MW lamp cadence: continuous and interrupted.

No	Item	Description
0	INTERRUPT LED	The MW lamp will flash at a rate determined by the timer settings. The shortest 'on' time is 100 ms and the longest 'on' time is 3000 ms. The timer is adjusted in 100 ms increments. 8COMBO3, 8SLI3 and 16SLI3 cards support interrupt led only.
1	16MWSLI LED	All SLI cards except 8COMBO3, 8SLI3 and 16SLI3 follow this option. This option has 2 sub-options as INTERRUPT LED and CONTINUOUS LED. If sub-option is set to INTERRUPT LED, SLI cards follow the cadence of the above INTERRUPT LED.

CONDITIONS

Systems with MWSLI cards only.

DEFAULT DATA

INTERRUPT LED: 1000MS-ON 1000MS-OFF

ACTION

1) Press Transfer button and enter 511.
   Display shows:

2) Press 0 or 1 to select CADENCE.

[513] HOTEL TIMER

This MMC is where the Hotel timers for guest-rooms are set. These are system-wide timers that affect all rooms. Refer to your Hotel documentation for more details.

No	Item	Description
0	CHECK OUT TIME	If a room is occupied after the checkout time, an additional day's room charge will be automatically added to the room bill. (If a room is flagged as Occupied and HOLD then the additional day's room charge will not be added. Setting a room status to HOLD allows a late checkout to be performed.)
1	ROOM CLEAN TIME	This is the time each day that the system will flag all occupied rooms as NEEDS CLEANING.
2	CHECK IN END TM	This is used to decide if an additional day's room charge will be automatically added to the room bill when the first Check Out Time is reached. For example, if you set the Check In End time as 5 am, all rooms checked in before 5 am will be automatically charged an extra day at the Check Out Time (which might be, say, 11 am). Rooms checked in after 5 am will not be charged extra until the next day, if still occupied at the Check Out Time.

CONDITIONS

This function can be used only when the Hotel function is enabled in MMC 813, HOTEL OPERATION.

4) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

RELATED ITEMS

MMC 601   ASSIGN STATION GROUP

[601] ASSIGN STATION GROUP

This MMC is used to build all station groups. There are 40 programmable groups available.

The options for setting up these groups are as follows:

No	Option	Description
0	TYPE	This is the type of group you are creating and can be one of the following: 0) NORMAL: Used to assign stations in a ring group. The members can be stations, common bell contacts or Ring over Page relays. 1) VMAA: Used to group a number of voice mail port extensions. These must have been defined in MMC 207 as VMAA ports or they cannot be entered here. Check all programming in MMC 726 to ensure that the In band DTMF codes are properly set. 2) UCD: Used to build a UCD group. The system will support two methods of UCD: **TYPE 1 UCD** The group OVERFLOW/N-ANS destination (see below) is defined as an SLT port to which you must connect some type of announcement device to play to callers while they are on hold. Please note that this type of UCD group has the following limitations. a) The announcement device must be able to terminate the announcement with a hook-flash and a transfer back to the UCD group. b) Only one caller at a time can hear the announcement. c) Each caller connected to the announcement must hear the announcement in its entirety. d) It is possible that a new caller may 'jump ahead' in the queue if a previous caller is currently connected to the announcement device. **TYPE 2 UCD** The group OVERFLOW/N-ANS destination (see below) is defined as an AA port or group. This will only work if an AA card has been installed in the system. The digital announcer in the AA card will supply two recorded announcements to callers in queue. The first announcement is played only once, the second announcement will repeat for as long as the caller is in queue. This type of UCD group has the following advantages: a) No external device need be installed to provide an announcement. b) Multiple callers can hear the announcement(s) simultaneously. c) Callers hearing the announcement will be transferred to a free UCD group member (agent) as soon as the agent becomes available.

(Continued)

No	Option	Description
0	TYPE (cont'd)	d) The callers place in queue is always maintained. Additional programming for this type of UCD group is in MMC 607. There is a maximum of 20 UCD groups available on a system due to availability of system resources. 3) AA: This is used to group a number of AA ports. An Auto Attendant (AA) card must be installed in the system to do this. 4) BI-VMS: This is the voice mail group for the Built-In Voice Mail card. 5) MESSAGE: Used to group a number of extensions to serve as a message desk or message group. When one of the stations in this type of group leaves a message to another station the messaged station will return the message to the message group so any member can answer the call. If a station is a member of more than one message group, then any message indications made by that station would be for the first numerical message group they are a member of. It is not recommended to program stations in to multiple station groups. 6) S0 STN GRP: This is used to group a number of S0 stations for a video conference. 7) VMSUCD GRP: This is used to collect UCD queuing prompts from the SVMi-20. The group members will be the VM ports. 8) MCS GROUP: This group is used to assign MCS ports for MCS conference feature. 9) IVR GROUP: This group is used to assign IVR ports. 10) VCS GROUP: This group is used to assign VCS ports.
1	RING MODE	Each group can have one of the following ring modes. This will decide how calls are placed to the group. 0) SEQUENTIAL: The stations listed as 'members' (see below) will be called on a 'first available' basis. Calls will first go to the first member; if the first member is busy, calls will go to the second member; if the second member is busy, calls will go to the third member, and so on. This type of group is useful for placing the bulk of the incoming calls with a selected individual, and other members only getting the calls when that member is busy. The number of members allowed for a sequential group is 48. 1) DISTRIBUTED: The first call will go to the first member, the second call will go to the second member, the third call will go to the third member. This type of group is useful for evenly distributing the call among all group members. The number of members allowed for a distributed group is 48. 2) UNCONDITIONAL: Calls are placed to all group members simultaneously. This reduces the number of members of the groups to 32. If a group member is busy, they can receive off-hook ring if defined in MMC 300. This ring mode option is not available for UCD or VMAA groups. The SGR INC BUSY option is not available for unconditional ring mode.

(Continued)

No	Option	Description
2	OVERFLOW	This is the timer value that will cause unanswered calls to a group to begin also ringing the NEXT PORT (see below) after this timer has elapsed. If set to 000, no overflow will take place.
3	GROUP TRANSFER	This is a timer that will determine how long Trunk Line calls transferred to the group will ring at the group before recalling. If set to 000, no recall will take place.
4	NEXT PORT	This is the station or group number that callers will also ring at if the OVERFLOW feature has been programmed. The OVERFLOW DESTINATION can be defined as: 1) COMMON BELL There is a common bell port on each MIS card. 2) RING OVER PAGE The ROP port can be defined as the NEXT port. 3) STATION OR STATION GROUP. Any station or station group can be defined as the NEXT port.
5	MEMBER	List all members that are to be in the group. Up to 48 members for the system are allowed in each group, but stations can be assigned to multiple station groups.
6	NEXT HUNT	The length of time a call will ring at a station before it hunts to the next group member.
7	GROUP BUSY	When this option is set to ON, a busy signal will be sent to the caller if all group members are busy. When this option is set to OFF, the ring back tone is sent to the caller even if all group members are busy. UCD is an exception to this rule. This option only works when MMC 210 SGR INC BUSY is set to OFF. When MMC 210 SGR INC BUSY is set to ON, all station groups will follow this setting.
8	GROUP AUTO ANS	If set ON, stations will Auto Answer calls to the group (when ring type is DISTRIBUTED or SEQUENTIAL)
9	ALLOUT NEXT	This is the option to designate whether to transfer the call directly to the extension (group) designated in the NEXT PORT without waiting during the OVERFLOW time when all the members of the extension group are in logged out status. (OFF/ON)
10	RBT MSG	This is used when executing the coloring service for the extension group. Enter the VMS message number which is to be used for coloring. In case of the F-STN, this operates according to the extension coloring message of the receiving group member. (0~9998, F-STN, NONE)

> **Calls to a group**
>
> Calls to a group do not follow the call forwarding instructions of any station in the group.
>
> **NOTE**

CONDITIONS

- A station can be assigned to all station groups. A station group can normally accommodate up to 99 members, but only up to 32 members if the RING MODE is UNCONDITIONAL.

- To enable off-hook ring for incoming calls to busy members, set OFFHOOK RING in MMC 300, CUSTOMER ON/OFF PER STATION, to ON. Even in this case, however, the off-hook ring is enabled only when the RING MODE is UNCONDITIONAL.

DEFAULT DATA

NORMAL GROUP

ACTION   DISPLAY

1) Press Transfer button and enter 601.
   Display shows:

```
[501] STN.GROUP

[606] ASSIGN SPEED BLOCK

Provides a means of adding or deleting speed dial blocks to the system or an individual phone. With the ability to delete a block or blocks of speed dial, it will not be necessary to waste these on such items as voice mail, DPIMs (Door Phone Interface Modules) or stations that do not require the ability to use speed dial. The Free List will show how many bins are left to be assigned.

The system list can have up to 500 numbers (or 950 numbers if set in MMC 861 SYSTEM OPTIONS) and each station can have up to 50 numbers. Speed dial numbers are assigned in blocks of 10. Each speed number may contain up to 24 digits.

DEFAULT DATA

SYSTEM: 200 ENTRIES
STATIONS: 1 BLOCK ASSIGNED

ACTION

1) Press Transfer button and enter 606.
   Display shows:

2) Press Right Soft button to advance to next line.
   OR

   You can view BUSY LIST using Volume button.

3) Make a selection of SYSTEM or EXT using Volume button and press Right Soft button to advance cursor.

4) Enter desired extension number via dial keypad.
   (e.g. 205)
   OR
   Press Volume button to make selection and press Right Soft button to advance cursor.

5) Enter valid number for bins.
   (e.g. 0-5 for EXT or 00-50 for SYSTEM)
   OR
   Press Volume button to make selection.
   OR
   Press Hold button to delete bin(s).

6) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

[607] UCD OPTIONS

Sets up UCD options when an AA card has been installed. MMC 601 must have already been used to define a UCD group with an overflow destination of an AA port or group. (A group is preferred over a port because a group allows multiple paths into the AA card and therefore has greater traffic handling capabilities.) When the group overflow timer in MMC 601 expires, the caller will be routed to the AA card. It is here that the caller is played the UCD 'FIRST MESSAGE' and 'SECOND MESSAGE' while in queue. This will continue until an agent becomes free or the caller is transferred to a final destination.

The following program options apply:

No	Option	Description
00	FIRST MESSAGE	After the caller has overflowed from the UCD group, the first message will immediately play. This message will only be played once for the caller.
01	SECOND MESSAGE	If no agent has become free after the UCD recall time (see UCD Recall Time), the caller will be played the second message. This message will be repeated for as long as the caller is in queue, at an interval specified in the UCD Recall timer below.
02	EXIT CODE	While the caller is hearing a message (but not during MOH), the caller may dial the DTMF digit specified here and be transferred immediately to the final destination. (see Final Destination) The exit code is optional and does not need to be used. If used, the first and second messages may be modified to provide instructions on its use.
03	RETRY COUNT	The UCD program is designed to route a caller to a 'final destination' after a programmable number of 'loops' through the UCD message. The range of this counter is 0 to 99. 00 means that there is no retry counter and the caller will remain in the UCD queue until answered. Any non zero value will route a caller through the UCD loop that many times before going to the final destination. The UCD will route calls to the final destination immediately if all members of the group are either out of group or in DND. Example: If this counter is set to 02, callers reaching a busy group will hear the first UCD message, be placed on hold, hear the second UCD message, be placed on hold, and finally hear the second message again before being transferred to the final destination.

No	Option	Description
04	FINAL DESTINATION	This is the final destination for the caller if not answered by a UCD agent. This destination is only reached if (a) the caller dials an exit digit during a message or (b) the retry count has expired. The final destination can be a station number, a group number, a disconnect or another plan. Plans are entered by pressing button 'A' plus two digits 01-12. A disconnect is entered as a destination of NONE. (Hold button) If the final destination is a voice mail port, the port will receive a FWD from UCD group integration message. The final destination will forward or overflow. If the forward to destination is a voice mail port the port will receive FWD from UCD group integration message. If the final destination is not forwarded, the call will ring or camp on to the final destination indefinitely. To ensure that you do not get a situation where all the call buttons are busy on the final destination it is advisable to make the final destination a group. (even if the group has only one station in it.)
05	RING NEXT TIME	This timer must be shorter than the overflow timer in MMC 601. If a higher value is entered, the display will show invalid entry. In the case where a UCD group has the ring next timer set at 000, an unanswered call will rotate evenly among all agents until it is answered. The UCD greetings will be heard during this routing process, but can be removed by defining the UCD messages in MMC 607 as unrecorded message numbers. This will simulate a circular hunt group.
06	UCD RECALL TIME	After a caller has heard a UCD announcement, they will be placed on hold until an agent becomes available or the UCD recall timer expires. When the UCD recall timer expires, the caller will again hear the UCD announcement. The range is 00-99. The default is 10.
07	MOH SOURCE	This option determines what Music-On-Hold source callers will be connected to between messages.
08	WRAP-UP TIME	This option will make a UCD agent unavailable to receive additional UCD calls after hanging up from the last one. This is to allow agents to complete work associated with the previous call before the next call begins ringing. The range is 000-250. The default is 010.
09	AUTO LOG OUT	This YES/NO option determines if a station will automatically log out of the UCD group when the RING NEXT timer expires. This setting will be ignored if the RING NEXT timer is set to 000.
10	ALLOUT FINAL	This YES/NO option determines if calls forward to the UCD final destination when all stations are logged out of the UCD group. If no UCD final destination is assigned then the call will disconnect.

No	Option	Description
11	AGENT PIN NO	This YES/NO option determines if an agent is required to enter an Agent ID when logging on to this group. The Agent ID can be entered in MMC 717.
12	GROUP BUSY NEXT	This YES/NO option determines if all agents are busy, specifies whether the next port is called immediately during overflow time.
13	LIMIT COUNT	This option determines accecptable call count for incoming call to UCD group. The range is 00-99.
14	LIMIT DEST	This opion determines call transfer destination for incoming call when incoming call is over the limitation.

[615] MGI GROUP

This program assigns designated MGI ports to specific services. This allows 'grading' of MGI card(s) for traffic conditions. The MGI ports can be segregated into groups.
Any entries made here may be ineffective if conflicting entries exist in MMC 616.

No	Type	Description
0	LOCAL ITP	This determines what MGI ports can be used with ITP phones across a private IP network.
1	PUB IP ITP	This determines what MGI ports can be used with ITP phones on a public IP network.
2	VOIP NTWK	This determines what MGI ports can be used for enhanced proprietary Samsung VoIP networking between OfficeServ 7000 Series systems across a private IP network.
3	PUB IP NTWK	This determines what MGI ports can be used for enhanced proprietary Samsung VoIP networking between OfficeServ 7000 Series systems on a public IP network.
4	VOIP TRUNK	This determines what MGI ports can be used as industry-standard H.323 or SIP VoIP trunks for communications across a private network
5	PUB IP TRK	This determines what MGI ports can be used as industry-standard H.323 or SIP VoIP trunks for communications on a public network.
8	ITP PAGED	This determines what MGI ports can be used with station page to ITP phones across a private IP network.

The MGI ports have two selection modes: Sequential or Distributed. The members for each selection are the actual ports on the MGI card(s).

DEFAULT DATA

MMC 700   COPY COS CONTENTS

[702] TOLL DENY TABLE

Provides a way to make toll restriction (call barring) very easy and flexible. There are 500 entries allowed in the deny table and each entry index can be assigned to a class of service. Each index can have up to 12 digits. With the use of wild cards (MMC 704, Assign Wild Character), more flexibility can be built into toll restriction. Wild cards can be used repeatedly in the dial string, limited only to what is allowed or denied in MMC 704.

Six toll levels, B to G, are programmable. Toll level A is set as 'unrestricted' by default and toll level H is set as 'in-house only' by default.

DEFAULT DATA

ALL ENTRIES ARE SET TO 0

PROGRAM BUTTONS

[705] ASSIGN SYSTEM SPEED DIAL

Enables the assignment of system speed dialing numbers. There are up to 500 entries available for programming. (or 950 entries if set in MMC 861 SYSTEM OPTIONS) Each speed dial number consists of a trunk or trunk group access code followed by a separator and up to 24 digits to be dialed. These dialed digits may consist of 0-9, and #. If the system recognizes a valid trunk or trunk group access number, it will automatically insert the separator.

NOTE	If 500 entries are allowed, the bin numbers are 500-999; if 950 entries are allowed, the bin numbers are 050-999.

[709] TOLL PASS CODE/SPECIAL CODE TABLE

This MMC provides a means to program trunk code tables as described below.

No	Special Code	Description
0	PBX ACCESS CODE	This table contains up to five entries and is used to identify the trunk access codes needed for toll restriction when the system is used with either a PBX or a CENTREX-supplied dial tone. Toll restriction will only be applied on trunks flagged as PBX in MMC 401 if a trunk access code entered in this table is dialed. Toll restriction will be applied to the digits following the trunk access code.
1	SPECIAL CODE	This table identifies the special feature codes used to activate central office custom-calling features such as CID Block and Call Waiting Disable. The special feature codes can be used on a per-call basis without affecting LCR or toll restriction programming. There is a maximum of 10 entries available, each of which may be up to four digits long.
2	TOLL OVERRIDE	This table of eight entries is used to identify the numbers that will bypass all dialing restrictions. This bypass includes toll restriction, trunk access and forced authorization or account codes. Each entry in the table can be up to 14 digits long.
3	OVRD USE TRK GRP	This entry designates the trunk group that toll override calls will access.

DEFAULT DATA

6) Press Transfer button to save and exit. OR Press Speaker button to advance to next MMC.	

RELATED ITEMS

MMC 710	LCR DIGIT TABLE
MMC 712	LCR ROUTE TABLE
MMC 713	LCR MODIFY DIGIT TABLE

[712] LCR ROUTE TABLE

The LCR ROUTE TABLE is responsible for selecting a specific trunk group in the completion of an outward bound call. This table works in conjunction with LCR DIGIT TABLE, LCR TIME TABLE, LCR COS TABLE and LCR MODIFIED DIGITS TABLE. After you dial a valid digit string, the system uses the LCR ROUTE TABLE to select a specific predetermined trunk group. There is a maximum of 99 routes available.

If more than one trunk group is available for call completion, the system uses the first designated trunk group and then the succeeding trunk groups. If all trunk groups are busy in a selected route, call queue becomes active and allocates trunks as they become available.

MMC 711	LCR TIME TABLE
MMC 712	LCR ROUTE TABLE

[714] DID NUMBER AND NAME TRANSLATION

Assigns an incoming DID call to a specific ring plan destination. It also provides a call waiting option, if needed, so that a second incoming DID call can be received.
The table is also used to define which MOH source a caller to that DID number will hear when placed on hold. A name up to 11 characters can be added to the number.
There is a maximum of 999 entries. If there is no matching number on DID service, the call is routed to the operator group.

Option	Description
DGT	Digits to be received from Trunk line. (up to 16 digits may be entered)
MOH SOURCE	Allows the technician to select what the calling party will hear if the call is placed on hold. There are four possible music selections.
PRI	DID priority option. There are nine priority levels: priority 1 is the highest and priority 9 is the lowest. When calls come into a station group and all group members are busy, the system will assign a priority to the DDI numbers so that calls from a high-priority DDI number will be placed at the front of the group queue. If this option is set to NO, the call held longest in the group queue has the highest priority.
RING PLAN 1: XXX, 2: XXX, 3: XXX, 4: XXX, 5: XXX, 6: XXX	Ring plan and destination during each ring plan. The destination can be a station, station group, trunk or trunk group. If a trunk or trunk group is selected the trunks must be programmed as E & M trunks to allow the received digits to be re-sent. This is referred to as DID Repeat digits over tie line. Entering the character 'B' means to repeat the received digits.
CW	Call Waiting Yes/No. (Allows a second DID call to be received.)
DC	The number of digits to delete. This is useful with Tandem switching, mixed numbering plans and DID Repeat digits over tie line. Maximum number of digits that can be deleted is 16.
MC1~MC6	The maximum call count. Before V4.60 this option is applied to all ring plans but now each ring plan has its own maximum call count. When this is set to 99, the feature will not work. When set to 0, if a call comes in that matches DID digits and DGT field then the system will reject the call. When set between 1 and 98, if a call comes in that matches DID digits and DGT field then the system counts the same DID digits, and if the count is the same or higher than this value, the system sends busy signal to caller.
NAME	Enter up to 11 characters to identify call. Refer to MMC 104, STATION NAME, for how to enter the name.
TONE	Assigns ring tone to DLI port.
CADENCE	Assigns ring cadence to SLT port.

CONDITIONS

If an E & M line is designated as FOLLOW DID TRANS in MMC 416 (ASSIGN E & M/DID RINGDOWN), calls are terminated according to the station direct dial translation table in MMC 714, DID NUMBER AND NAME TRANSLATION.

MMC 721   SAVE STATION KEY PROGRAMMING
MMC 722   STATION KEY PROGRAMMING
MMC 723   SYSTEM KEY PROGRAMMING

[721] SAVE STATION KEY PROGRAMMING

Provides a service tool which minimizes the accidental loss of programmable buttons on phones. First the data is saved and then the station can be replaced with another station type or the keys can be reprogrammed to other features. Once testing or replacement is completed, the data can be restored to the individual station, providing the same type is in place.

CONDITIONS

This program must be used carefully because key programming data is saved to a common programming database. When a new phone is connected, the system copies data from this database to the new phone.

[722] STATION KEY PROGRAMMING

Allows the customizing of programmable buttons on specific phones and add-on modules (AOMs). For phones, buttons 1 and 2 are set as CALL buttons by default. For AOMs, all buttons are set as DS keys by default. Features are selected by pressing the dial keypad buttons the required number of times. For example, for OHVA, the number 6 is pressed three times. If the BOSS key is required, 2 is pressed for the first letter B and then the Volume button used to change the selection from BARGE to BOSS.

[724] DIAL NUMBERING PLAN

This MMC allows the technician to change directory numbers for stations, trunks, station groups, trunk groups and feature access codes. The system can be pre-programmed with default 3- or 4-digit numbering for stations, station groups and trunk numbers depending on the position of the DIP switches on the MCP card. There is an error message provided to prevent the accidental duplication of a directory number or feature access code.

NO	Type of Dial No	Description
00	STN NUMB.	This is where station directory numbers are changed or assigned
01	TRK NUMB.	This is where trunk directory numbers are changed or assigned.
02	VMAA NUMB.	This is where VM/AA directory numbers are changed or assigned.
03	MISC NUMB.	This is where directory numbers for relays, MOH ports and the alarm sensor are changed or assigned.
04	MGI NUMB.	This is where MGI port directory numbers are changed or assigned.
05	S0 NUMBER	This is where directory numbers for BRI station ports are changed or assigned. (This option may not be available in certain OfficeServ models.)
06	MOBEX NUM	This is where MOBEX directory numbers are changed or assigned. (This option may not be available in certain OfficeServ models.)
07	GROUP NUMBER	This is where station or trunk group numbers are changed or assigned.
08	FEATURE NUMBER	This is where feature access codes are changed or assigned. Dialing codes are entered via the dial keypad by pressing a number the required number of times to select the feature. For example, for OHVA, the number 6 would be pressed three times. Please remember that this program is system-wide.
09	NETWORK NUMBER	This is where additional LCR access codes are entered if two or more OfficeServ 7000 Series systems are networked together. LCR-xx: This codes will be translated by NTWK LCR DGT table in MMC824 RSXXXX: This codes will be translated by REMOTE STN table in MMC868

[725] SMDR OPTIONS

Allows the system administrator to select the information printed on the SMDR report.
The following options may be selected:

No	Option	Default	Description
00	PAGE HEADER	YES	This option determines whether a page header will print at the top of each page. This would normally be turned off if SMDR is being sent to a Call Accounting machine.
01	LINE PER PAGE	66	This option selects the length of each page to determine when to print the SMDR header. The number of lines is in the range 01-99.
02	INCOMING CALL	YES	This option determines whether incoming calls will print on SMDR.
03	OUTGOING CALL	YES	This option determines whether outgoing calls will print on SMDR.
04	AUTHORIZE CODE	YES	This option determines whether authorization codes will print on SMDR. If this option is set to NO, '****' is printed on SMDR.
05	SMDR START TIME	YES	This option determines whether valid calls will include the minimum call time in total call duration.
06	IN/OUT GROUP	YES	This option allows a message, IN GROUP or OUT GROUP, to be printed in the 'digits dialed' column each time a station enters or leaves a group.
07	DND CALL	YES	This option allows a message, IN DND or OUT DND, to be printed in the 'digits dialed' column each time a station enters or leaves DND.
08	WAKE-UP CALL	YES	This option determines whether stations receiving an alarm reminder call will print on SMDR.
09	DIRECTORY NAME	NONE	This option allows the system administrator to enter a name up to 16 characters which will appear on the SMDR header.
10	CALLER ID DATA	YES	This option can be selected to print Caller ID data received from the Central Office on incoming calls. This option requires the use of a 132-column wide carriage printer or an 80-column printer set for condensed print.
11	ABANDON CALL	YES	If this option is set to YES, unanswered calls for which CID information was received will print on SMDR.
13	NO. OF DIAL MASK	0	If this option is set to a numeric value, the selected last digits of the number dialed field will be masked as asterisks (*) on the SMDR print out. Maximum masked digits is 18. First 4 digits will not mask.

(Continued)

No	Option	Default	Description
15	INCOMING ANSWER	YES	If this option is set to YES, the duration of calls ringing before being answered will print on SMDR.
16	INTERCOM CALL	YES	This option determines whether intercom calls will print on SMDR.
17	KEY MMC IN/OUT	YES	If set to YES the SMDR record will show programming being opened and closed in MMC 200 and MMC 800.
20	HOTEL PAGE FEED	END	This option determines where the page feed is inserted on HM REPT. (Hotel Application Only)
21	HOTEL START LINE	0	This option determines that the number of empty lines per each page on HM REPT. (Hotel Application Only)
23	DID NUM/NAME	YES	If this option is set to YES, received DID information will print on SMDR.
24	ITP REGISTRATION	NO	If set to YES the SMDR record will show registration of ITP phones.
25	SET RELOCATION	NO	If set to YES the SMDR record will show Set Relocations.
26	CALL INDEX	NO	If set to YES the SMDR record will show Call Index.
28	INCOM CALL RESP	NO	This option determines whether incoming ISDN trunk calls will print on SMDR. Even though the called party doesn't answer, the SMDR record ('IR') will print.

RELATED ITEMS

MMC 300   CUSTOMER ON/OFF PER STATION

[726] VM/AA OPTIONS

This MMC is used to define all the in-band DTMF codes sent to voice mail ports.
These in-band codes can be 0-9, A, B or C, and perform two functions:

CALL AND TYPE INFORMATION

This is a DTMF Signaling string sent to a voice mail port when the voice mail port answers a call. This DTMF information tells the voice mail port what type of call it is receiving and where the call is coming from. (e.g. call forwarded from extension 225)

CALL PROGRESS TONES

These are sent to the voice mail system to provide information about the progress of the call. (e.g. ring back, busy or disconnect) Most voice mail systems can use DTMF in-band Signaling for more efficient call processing. This MMC has many parameters that can be programmed according to the type of automated attendant and/or voice mail system connected.

CALL and TYPE INFORMATION

The format of the DTMF data sent to a VM/AA port is as follows:
[CALL TYPE] + **[DN1]** + **[SEPARATOR]** + **[DN2]**

An example of this would be:
[FORWARD ALL] from **[225]** on trunk **[703]**

Each field can be programmed individually as follows:

Option	Description	Default
EXTENSION FOR DN1	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN1 field indicating that a station is ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send station data in the DN1 field.	No
TRUNK FOR DN1	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN1 field indicating that a trunk is ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send trunk data in the DN1 field.	No
EXTENSION FOR DN2	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN2 field indicating the originating station of the call ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send station data in the DN2 field.	No

(Continued)

Option	Description	Default
TRUNK FOR DN2	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN2 field indicating the originating trunk of the call ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send trunk data in the DN2 field.	No
SEPARATOR	When both DN1 and DN2 are used, a digit defined here is sent between DN1 and DN2 so the VMAA system can determine where DN 1 stops and where DN 2 starts. The separator can be DTMF 0 through 9, *, #, A, B or C.	No
DISCONNECT SIGNAL	This is the call progress digit sent to the VMAA port in place of a disconnect open. The digit defined here is sent three times.	C
CALL TYPE ID	This is the DTMF digit that is sent first in the in band digit string and can identify any of the following call types.	-

No	Call Type	Description	Default
0	DIRECT CALL	A call originating directly from another station in the system.	1
1	ALL FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD ALL set.	2
2	BSY FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD BUSY set.	3
3	NOA FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD NO ANSWER set.	4
4	RECALL	A call is recalling the VM/AA port after being transferred and not answered.	4
5	DIR TRK CALL	A Trunk Line call has gone directly to VM/AA. (e.g. trunk 717 DIL to VM/AA)	6
6	OVERFLOW	A call has OVERFLOWED to the VM/AA port from a station group.	4
7	DID CALL	A DID call has called the VM/AA port.	8
8	MESSAGE CALL	A message button or message reply feature code has been used to call the VM/AA port.	9

Option	Description	Default
PROGRESS TONE ID	These are the DTMF codes that is sent to the VMAA port in place of regular progress tones. For example, when a VMAA port goes off hook to originate or transfer a call, instead of hearing normal dial tone, it will hear DTMF 'BA'. Progress tones can greatly increase the efficiency of a VMAA system because it is easier and quicker to detect DTMF than a busy, ring back or DND tone. Progress tones can identify any of the following.	-

No	Call Type	Description	Default
0	DIAL TONE	Dial Tone	No
1	BUSY TONE	Busy Tone	No
2	RINGBAK TONE	Ringback Tone	No
3	DND NO MORE	DND or No More Call Button Error	No
4	HDSET ANSWER	Off Hook Answer	No
5	SPKER ANSWER	On Hook Answer	No

Option	Description	Default
CALLER ID NUMBER	If set to YES, when the voice mail auto attendant system answers a call the system will send Caller ID data as DTMF tones to the VMAA port.	No

GENERAL RULES

1) 201 is talking to a trunk and presses TRANSFER plus the station number, but the station is forwarded to VM/AA and VM/AA answers. When this happens, if 201 presses TRANSFER again to return to the trunk, the VM/AA port is not on hold. It is disconnected.

2) A VM/AA port leaves a message indication for a station. When the station returns the message, any available port in the VM/AA group should ring, not only the one that left the message.

3) A VM/AA port leaves a message for a station. When the station returns the message, the MESSAGE LED is not automatically turned off. If a VM/AA system turns on the MESSAGE LED, the VM/AA system must turn it off.

4) If DTMF call progress tones are not enabled, the system sends regular call progress tones.

5) When a VM/AA port calls a station that is in the AUTO ANSWER or VOICE ANNOUNCE mode, the phone will be forced to ring.

6) All calls to a VM/AA port or group ring with Trunk line ringing cadence, not intercom ring cadence.

EXAMPLES OF VM/AA OPERATION (IN-BAND DTMF DIGIT STRING)

In the following example, all call and type data is turned on unless otherwise stated. X is the separator digit, all-default values are used in these examples and **[ ]** is not used.

A DIL 701 calls a VM/AA port or group:
[1] + **[701]** + **[ ]** + **[ ]**

In the above example, if Trunk Line information is not used:
[ ] + **[ ]** + **[ ]** + **[ ]** (Nothing is used)

DIL 701 calls a call-forwarded station (205):
[2] + **[205]** + **[X]** + **[701]**

In the above example, if forward information is not used:
[ ] + **[205]** + **[X]** + **[701]**

In the above example, if forward and DN2/Trunk Line information is not used:
[ ] + **[205]** + **[ ]** + **[ ]**

DIL 701 calls group 501 that overflows to VM/AA:
[4] + **[501]** + **[x]** + **[701]**

In the above example, if overflow information is turned off:
[ ] + **[ ]** + **[ ]** + **[ ]** (Nothing is sent)

A DID call rings the VM/AA directly:
[B] + **[9999]** + **[ ]** + **[ ]**
9999 are the DID digits from Trunk Line

In the above example, if did information is turned off:
[ ] + **[9999]** + **[ ]** + **[ ]**

A station transfers (blind or screened) a call (Trunk Line, DID or intercom) to VM/AA group or port. When the transferring station hangs up (blind transfer):
[ ] + **[ ]** + **[ ]** + **[ ]** (Nothing is sent)

A station (202) transfers a Trunk Line call (702) to a station (225) that is Call Forward All to a VM/AA group or port. When the transferring station hangs up (blind transfer) and the VM/AA group or port answers:
[2] + **[225]** + **[x]** + **[702]**

A station (202) transfers a Trunk Line call (702) to a group (501) that overflows to a VM/AA group or port:
[4] + **[501]** + **[X]** + **[702]**

In the above example, if overflow information is turned off:

[ ] + [ ] + [ ] + [ ] (Nothing is sent)

A station (205) calls a VM/AA port or group:

[1] + [205] + [ ] + [ ]

In the above example, if direct information is turned off:

[ ] + [ ] + [ ] + [ ] (Nothing is sent)

A station (205) calls using MESSAGE key:

[9] + [205] + [ ] + [ ]

In the above example, if message information is turned off:

[ ] + [ ] + [ ] + [ ] (Nothing is sent)

A call (702) recalls back from station 225 to the VM/AA group:

[4] + [225] + [x] + [702]

In the above example, if recall and DN2/CO information are turned off:

[ ] + [ ] + [ ] + [ ] (Nothing is sent)

[732] AA TRANSLATION TABLE

AA translation tables are responsible for routing calls based on digits dialed.
There are 12 translation tables available. Each table can be assigned to one or more plans in MMC 733 Auto Attendant Plan Programming. A translation table consists of a number of 100 entries. Each entry number has two fields to program: the first field is for the digits received by the caller and the second field is for the destination or action.

The destination field can be a station number, station group or another plan.
Plans are entered by pressing special key A plus two digits 01-12. If a voice mail group is entered, the call will be transferred to the voice mail system with the appropriate in band digit packet to indicate a Forward All call from the station number dialed by the caller.

The digits defined in the first field of this MMC **[dialed digits]** must be a valid station number.

If the digits programmed as a destination are a voice mail port the voice mail port will receive an in band packet of DTMF equal to **[FWD from EXTENSION NUMBER DIALED]**.

There are a number of special characters that are used in translation tables.
They are as follows:

- **[*]**: Used to represent any digit.

- **[Pxx]**: (Special Key A) Plan. Used to assign a plan as a destination (P01-P12)

- **[B]**: (Special Key B) Buffer. When used in the destination field, transfers the call to the same extension as the digits dialed by the caller.

- **[C]**: (Special Key C) Change greeting or Ring Plan

- **[S]**: (Special Key E) System Speed Dial Number. Used to assign a System Speed Dial number as a destination.

DESTINATION:
Consider the following entry examples.

Digits	Dest	Comments
0	0	Caller will be transferred to 0.
2**	B	If a caller dials any three digit extension number beginning with 2, the call will be transferred to the extension number dialed.
48#2	C	If a caller dials 48#2, the current plan's greeting may be changed. 48#2 is essentially a special passcode for changing the current greeting or ring plan.
1	526	If a caller dials 1, the call will be transferred to group 526.
5	P08	If a caller dials 5, the call will be transferred to plan 08.

NOTE	Number conflicts like 2 and 23 or 56 and 567 are allowed in translation table programming. In these cases, the system will compare received digits from AA card after AA TRANS time and transfer to the proper destination.

NOTE	**MMC [732]** This program may not be available in certain OfficeServ models.

MMC 735	AA USE TABLE
MMC 736	AA MESSAGE MATCH

[733] AA PLAN TABLE

Used to program each AA plan. A plan is a module that processes a call. There are twelve plans available in each AA card. Each plan can route a caller to any group, extension or another plan. Each port can answer calls with a different plan as defined in MMC 735.

AA messages can be as follows:

Message	Description
MESSAGES 01-48	These can be created using the AAREC Soft button (programmed on phones by using MMC 722 or 723). A total of two minutes of message time is available.
MESSAGES 49-64	These are pre-programmed as follows: (The announcement may be different according to the AA MSG ROM) 49 'Thank you for calling, please dial your party's extension number'. 50 'Invalid number, please try again'. 51 'I'm sorry, there is no answer'. 52 'I'm sorry, that station is busy'. 53 'One moment please'. 54 'Transferring'. 55 'I'll transfer you'. 56 'Good-bye'. 57 'Thank you'. 58 'Please hold for the operator'. 59 'Please hold for assistance'. 60 'Thank you, good-bye'. 61 'I'm sorry, all stations are presently busy'. 62 'I'm sorry, all stations are still busy'. 63 'Please call back later'. 64 'I'm sorry, not a valid selection'.

This MMC includes options to select messages to play to a caller. These messages can be as follows:

No	Option	Description
00~05	PLAN MSG1~6	This is the message that will be heard by the caller when the AA port answers a call if the telephone system is in a particular ring mode or if another message has been selected by the AA administrator.
06	ALTER MSG	This is the message that will be heard by the caller when the AA port answers a call if this message has been selected by the AA administrator.
07	INVLID MSG	Determines what message will play if the caller dials invalid digits repeatedly until the retry counter expires. Invalid digits are digits not contained in the translation table for this plan. The invalid message will repeat for the value contained in the retry counter.

(Continued)

No	Option	Description
08	NO ANS MSG	Determines what message will play if the caller is recalled to the AA port because of a no answer.
09	XFER MSG	Determines what message will play if the caller is transferred.
10	BUSY MSG	Determines what message will play if the caller selects a busy station.
11	NO STN MSG	Determines what message will play if the caller dials an invalid extension (not installed). This retry message will repeat for the value contained in the retry counter. See Retry Count.
12	NO ACT MSG	Determines what message will play if the caller does not act.
13	CAMP ON	Determines if calls will be transferred to busy stations. Calls transferred to busy stations will be camped-on. The default value is OFF.
14	ANS DELAY	Sets how many rings will occur before this plan answers a call. The default value is 01 second.
15	RETRY CNT	Determines how many selection errors a caller may make before being transferred to the invalid digits destination. In case of no action, will not follow this option.
16	TRANS TABLE	Determines what translation table this plan will use. (see MMC 732 AA TRANSLATION TABLE) The default value is same number of plan number.
17	BUSY DEST	Determines the destination for the call if the selected destination is busy. This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
18	NO ANS DEST	Determines the destination for the call if the selected destination does not answer. This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
19	NO ACT DEST	Determines the destination for the call if the caller makes no response (this is also the destination for rotary dial callers). This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
20	INVLID DEST	Determines the destination for the call if the caller dials invalid digits after the retry counter has expired. This destination can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.

[736] AA MESSAGE MATCH

It is possible to make 48 customized recordings on the AA ports of the AA card.
For instructions on how to create these recordings, see User Instructions, Auto Attendant and Uniform Call Distribution System Administration.

It is important to understand the difference between recordings and messages.
For example, you have customized recording 01 as 'Thank you for calling' and you have customized recording #02 as 'One moment please'. By default, message 01 is recording 01. When message 01 is selected as part of AA or UCD programming, the caller hears 'thank you for calling' (recording 01). When message 02 is selected, the caller hears 'one moment please' (recording 02). If you need a new message that says 'thank you for calling, one moment please,' you can record this as recording 03 and play it as message 03 but this uses some of the RAM storage on the AA card.
An easier way is to link recordings 01 and 02 to produce message 03.

This is the purpose of this MMC. We simply tell the system that message 03 equals recording 01 plus recording 02. In this MMC, the top line of the phone display indicates a message number and the bottom line indicates the recording numbers.

MMC 733	AA PLAN TABLE
MMC 735	AA USE TABLE

[748] COSTING DIAL PLAN

The COSTING DIAL PLAN is used to analyze the leading dialed digits of a dialed number and determine what DIAL PLAN it is to follow. Data entry for this program is in three fields: ENTRY, DIGITS and COST RATE table reference.

DIGITS

Up to 500 entries may be made. Each entry can be up to 10 digits. These are the entries that will be searched to find a match with the digits dialed by the station making the call. This is a leading digits table and the system will look for the exact leading digits in the table that match the number dialed. For example, if a user dials 1305 and the COSTING DIAL PLAN contains 1, 1308 and 1312, the dialed digits will be matched to 1 because 1308 and 1312 do not form a complete match. When this table is created by the technician or when any new entries are added, the system automatically places all entries in numerical order.

Wild cards (∗) can be used to represent any digit. The Toll Restriction Wild Card Character assignment (MMC 704) is common with Call Costing and Toll Restriction. When all entries are used, **[LAST ENTRY]** is displayed.

DIAL PLAN

This shows in the programming display as DP and represents a pattern (1-7, 8). This pattern is used by MMC 433, TRUNK COST RATE, to determine the correct billing according to MMC 749, RATE CALCULATION TABLE.

When the system finds a DIAL PLAN match for the digits dialed, the system checks MMC 749 to see what RATE CALCULATION to use for costing the call.

EXAMPLES

When a station user dials a number, the system will search the COSTING DIAL PLAN to find a match. If 13056 is dialed and this MMC contains entries 1, 13, 1305 and 1401, the closest match is 1305 and this will be selected. If 1305 is dialed and this MMC contains entries 1, 13, 13056 and 1401, no action will be taken until the station user dials another digit. If the next digit is 6, the 13056 entry is the closest match and this entry will be selected, but if the next digit is anything other than 6, the 13 entry is the closest match.

Whenever a new entry is added, the system will sort all entries in numerical order because this is the logical order in which the system analyzes digits. Wild cards are checked after exact digits. If 1813 and 18∗∗ are entered, the system will check 1813 first. If no match is found, it will check 18∗∗.

[749] RATE CALCULATION TABLE

The RATE CALCULATION TABLE is used to define the billing charges for each COST RATE. These rate tables correlate with the Trunk Cost Rate and the Costing Dial Plan. There are eight call costing rates. Each rate has the following data fields.

No	Type	Description
0	1ST DUR (FIRST INTERVAL DURATION)	This is the amount of time at the beginning of each call to which a fixed cost is applied. The range is 0-999 seconds; e,g. 180 seconds (three minutes).
1	1ST COST (FIRST INTERVAL COST)	This is the cost for the first interval duration in £s sterling or Euros. The range is 0 to 999; e.g. 345 (£3.45 or €3.45).
2	2ND DUR (SECOND INTERVAL DURATION)	This is the duration of each billing increment after the first interval has expired. The range is 0-999 seconds; e.g. 006 seconds (six seconds).
3	2ND COST (SECOND INTERVAL COST)	This is the cost for each billing increment, in £s sterling or Euros, after the first interval has expired. The range is 0-999; e.g. 100 (£1.00 or €1.00).
4	SURCHARGE	This is a one-time charge, in £s sterling or Euros, that is applied to the call over and above the time charges. The range is 0-999; e.g.150 (£1.50 or €1.50).

NOTE

Currency values (£ or €)

Currency values (£ or €) depend on the setting for the USE EURO option in MMC 210.

[750] SVM SYSTEM

This MMC is used for the Samsung Built-In Voice Mail card.

There are four options available in this MMC:

No	Option	Description
0	SVM AUTO SETUP	When the Built-In Voice Mail card starts, part of the power up procedure will download data from the system to determine time, date, what mailboxes to create, and system numbering plan. This must be done at least once, but once done this download feature can be turned NO to save boot up time.
1	RESTART SVM	If this option is set to YES the Built-In Voice Mail card will immediately restart according to the download OPTION specified above. (This option may not be available in certain OfficeServ models.).
2	SVM TYPE	This option is determine which type of VMS will be used among SVM CARD, SVM-400, IP-UMS. (This option may not be available in certain OfficeServ models.).
3	DOWNLOAD OPTIONS	This option is determine which type of Tel number will be download VM. This option is determine which type virtual port include during mailbox and system numbering plan downloading procedure. The virtual port type are followed: **No / Type / Description** 0 / STATION NAME / Extension name 1 / DLI/SLI / DLI/SLI phone number 2 / DESKTOP ITP / DESKTOP IP-based phone number 3 / WiFi PHONE / Wireless IP-based mobile phone number 4 / SIP PHONE / Download of SIP Extension Number 5 / VIR DLI/SLI / Virtual extension number 6 / SO TERMINAL / ISDN terminal number 7 / SPNET STN / SPNET station number via networking 8 / MOBEX STN / MOBILE extension number 9 / STN GROUP / Station group number 10 / PSTN TRUNK / PSTN group number 11 / VOIP TRUNK / VoIP SIP/H323 trunk number 12 / SPNET TRUNK / VoIP networking trunk number
4	SVM MSG PURGE	It this option is set to YES all VM messages are deleted immediately.

The nested table for option 3 (DOWNLOAD OPTIONS):

No	Type	Description
0	STATION NAME	Extension name
1	DLI/SLI	DLI/SLI phone number
2	DESKTOP ITP	DESKTOP IP-based phone number
3	WiFi PHONE	Wireless IP-based mobile phone number
4	SIP PHONE	Download of SIP Extension Number
5	VIR DLI/SLI	Virtual extension number
6	SO TERMINAL	ISDN terminal number
7	SPNET STN	SPNET station number via networking
8	MOBEX STN	MOBILE extension number
9	STN GROUP	Station group number
10	PSTN TRUNK	PSTN group number
11	VOIP TRUNK	VoIP SIP/H323 trunk number
12	SPNET TRUNK	VoIP networking trunk number

	Removing Built-In Voice Mail Card
NOTE	If during any test procedures you need to run the system with a default database and power up with options set to YES, the Built-In Voice Mail database will be overwritten according to the data in MMC 751 and the default numbering plan. If you plan this type of test, remove the Built-In Voice Mail card until the procedure is finished and the customer database is reloaded.

[752] AUTO RECORD

This MMC is only used for the Samsung Built-In Voice Mail card. Specific stations in the phone system can be assigned to automatically record conversations. When this option is set, all incoming, all outgoing, or all calls (incoming and outgoing) can be recorded.

In this MMC you can assign:

- Station number: Which station can use this feature.

- Mailbox number: What mailbox the conversations are recorded in.

- I, O or B: What type of calls are recorded. (in, out or both)

- Voice mail port number: What port is dedicated to the station.

> ⚠️ **WARNING**
>
> **Before using the Auto Record feature**
>
> Before using the Auto Record feature, make sure that you are not violating any laws. Samsung is not responsible for any illegal use of this feature.

CONDITIONS

A maximum of eight stations can use this feature at one time. The same port cannot be assigned to more than one station. Attempts to do this will result in an error message. When a Voice Mail port is assigned here, it is automatically removed from the Voice Mail group defined in MMC 601.

[754] VM HALT

This MMC is only used for the Samsung Built-In Voice Mail card or embeded VM.
It is used to halt the Voice Main card or embeded VM.
The way to re-execute halted VM differs according to kinds of VM. In case of Samsung
Built-In Voice Mail card, you just set STATUS option to 'PROC' and VM is recovered.
But in case of embedded VM, you select 'RESTART' in STATUS option and should reboot
the system because it is impossible to execute embedded VM only.

DEFAULT DATA

[756] ASSIGN VMMOH

This MMC is only used for the Samsung Built-In Voice Mail card or embeded VM.
It is used to assign each port a Music-On-Hold source for the system from a sound file located on the Voice Mail card hard disk drive. The 100 available sound files are defined as numbers 5000 to 5099.

To use the default music, select the number; otherwise, make sure you record the sound file first. Then, assign the sound file to a Voice Mail port. For example, if you record sound file 5025 you would associate 25 with a specific Voice Mail port, e.g. 225. This will dedicate the port for use only as MOH and remove it from group 529 or 549. Now 225 will show up as a valid music source in MMCs 308, 309 and 408. Each Music-On-Hold source assigned here requires one Voice Mail port.

When the first Built-In Voice Mail port is used for VMMOH

If the first Built-In Voice Mail port is used for VMMOH, it must be disabled before boot up since Built-In Voice Mail Card and the system use port 1 during boot up to exchange critical information. For this reason we suggest you use the last port as VMMOH ports.

DEFAULT DATA

NOT USED

ACTION

1) Press Transfer button and enter 756.
   Display shows:

2) Dial VM number. (e.g. 215)

MMC 507   ASSIGN RING PLAN TIME

[759] CLI RINGING

This MMC assigns a specific CLI number received from the central office to a specific ring plan destination. Also allows you to reject a specific CLI number and assign priorities. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest.

It also allows you to select the ring tone heard at a phone when called by a specific CLI number. There is also a cadence control option to perform a similar function for SLTs. There are eight ring tones available along with a Follow Station (NO) option. There are five cadences and a Follow Station option (NO) for SLTs.

DEFAULT DATA

NONE

Option	Description
CLI	CLI number to be received from the incoming trunk line. Up to 16 digits may be entered.
REJ	CLI call reject option. When this sets YES, if a call comes that matched CLI number and CLI field then the system will be reject call.
PRI	CLI priority option. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest. When calls into station group come and group members are all busy, the system will assign a priority to the CLI number so that calls from a high priority CLI number will be placed at the front of the group queue. If this option sets NO, the longest call that placed at the group queue has the highest priority.
R1: XXX, R2: XXX, R3: XXX, R4: XXX, R5: XXX, R6: XXX	Ring plan and destination during each ring plan. The destination can be a station, station group.
TONE	Ring Tone options for a specific CLI Number at DGP/ITP. (NO, 1~8)
	No	Calls will ring with the phone users choice of ring frequency.
	1~8	Calls from the programmed CLI number will ring phones with this ring frequency.
CAD	Ring Cadence options for a specific CLI Number at SLT's (NO, 1~5)
	No	Calls will ring with the normal SLT ring cadences.
	1~5	Calls from the programmed CLI number will ring SLT's with this ring cadence. 1: intercom ring, 2: CO ring, 3: DOOR ring, 4: ALARM, 5: CALLBACK

[760] ITEM COST TABLE

This MMC provides a means to assign a code to a billable item along with a 10-character name for the item. There are a maximum of 100 entries (00 to 99) in the table with item 00 reserved as the code for room deposits, 01 reserved as the code for phone deposits and items 89 to 99 reserved for other PMS stream items.

These item codes, with the exception of codes 93 to 99, will appear on the guests' bills at checkout and will serve to identify what each charge on the bill is for. The room bill, when printed, will also show telephone calls with an item designation of TEL and the name field will show the number dialed. In addition to the name, up to eight of the tax codes or rates defined in MMC 761 can be applied to each item.

PRE DEFINED CODES

No	Code	Description
00	Room Deposit	This is the code used for pre-pay room deposits.
01	Phone Deposit	This is the code used for pre-pay phone deposits.
02-88	-	User-Assignable code
89	W/UP SET	A wake up call was set.
90	W/UP ANS	A wake up call was answered.
91	W/UP N/ANS	A wake up call was not answered.
92	W/UP CANCL	A wake up call was cancelled.
93	Check In	A guest has checked into a room.
94	Check out	A guest has checked out of a room.
95	Available	A room has been flagged as AVAILABLE.
96	Occupied	A room has been flagged as OCCUPIED.
97	Clean Room	A room has been flagged as NEEDS CLEANING.
98	Fix Room	A room has been flagged as NEED MAINTENANCE.
99	Hold	A room has been flagged as HOLD.

CONDITIONS

This function can be used only when the Hotel function is enabled in MMC 813, HOTEL OPERATION.

MMC 761   TAX RATE SETUP

[761] TAX RATE SETUP

This MMC allows the technician to set up the eight tax rates used in MMC 760.
Each tax rate may be defined as a fixed value or as a percentage of the item cost.
In addition, a 10- character name may be used to define the reason for the tax.
The options are detailed below.

Option	Description
TAX RATE	The number assigned to this tax rate. Tax rates are numbered 1 to 8 to match the rate field in MMC 760, counting from left to right.
TYPE	The type of tax. Defines if the VALUE is applied as a percentage (%) of the cost of an item (e.g. service charge) or is added as a fixed currency value (C) to an item or is applied as a Inclusive VAT percentage (I) of the cost of an item.
VALUE	The actual tax rate that will be applied to the item cost.
NAME	A 10-character name that will be displayed on the room bill alongside the tax.

CONDITIONS

This function can be used only when the Hotel function is enabled in MMC 813, HOTEL OPERATION.

[763] SECOND LCR

This MMC allows to input the Extended LCR information table.
Max table index is 200. This table have translation and route information for input digits.

The last table (index 200) has only 'NEXT ROUTE' option. This is used for the case there are no matching table for user input digits. NEXT ROUTE option can be set by LCR or trunk group as follows.

Option	Description	Default
IN DIGIT	Define user input digits after E-LCR code (Max 16 digits)	-
OUT DIGIT	Outgoing digits (these digits will be sent instead of input digits) (Max 16 digits)	-
USE LCR NUM	Select which E-LCR code (E-LCR1, E-LCR2, E-LCR3, E-LCR4) used for this table index.	ALL
NEXT ROUTE	Select 'LCR' or trunk group to seizure. 'LCR' means that MMC710 LCR DIGIT table will be used with outgoing digits (OUT DIGIT).	LCR

[768] PHONE BOOK

This is the program to provide single address book for all OfficeServ system and connected IP phones. System saves phone book as XML file and notifies to the phone to get this XML file.

<Main Features>

•   Provide system phone book (tel number, user name and group name).

•   When phone book is changed, system sends update message to the phone.

•   IP phone manages 2 phone books as system phone book and personal phone book.

•   System saves its phone book as XML file and uploads this file to the FTP server. Then system makes each phone to get this XML file from the FTP server.

Only below IP phones can use phone book feature.
: SMT-2200/2205, SMT-3100, SMT-5210/5220/5230/5240/5243

Option	Description
PHONE BOOK	System phone book information. (001~100) Set Tel number, User name and Group name sequentially.
DNLD PUBLIC PORT	Public port for downloading phone book.
UPDATE TO PHONE	Send Phone book update message to IP phones. Then IP phones try to get phone book data.

[809] TX LEVEL AND GAIN

Allows the system administrator to set the base level of TX volume on phones.
There are eight levels that can be controlled by the Volume buttons on phones, and 10
controllable levels in the system. This MMC allows the system administrator to classify
any desired eight levels within 11.

No	Option	Description
0	TX LEVEL CONTROL	Adjusts the transmitting sensitivity (max.: 9) Default values are:
		INDEX: 0 1 2 3 4 5 6 7
		LEVEL: 0 1 2 4 3 5 6 7
1	MISC TSW GAIN	Adjusts the level of the internal music source of the MCP card or the external music source of the MIS card (0~7, higher numbers mean lower levels). Default value is 0. (This option may not be available in certain OfficeServ models.)
2	TSW GAIN CONTROL	Adjusts the tone sensitivity. There are 11 types of matrix connections of the T-Switch that adjust the tone sensitivity. If the gain value of each trunk channel is configured in MMC421, this option is ignored.
3	R2 LEVEL CONTROL	Adjusts the R2 threshold and TX/RX Gain - THRESHOLD: R2 threshold control (0-7) - TX LEVEL: TX gain control (0-20) - RX LEVEL: RX gain control (-6-0) (This option may not be available in certain OfficeServ models.)
4	CID TYPE/LEVEL	Adjusts the CID type and TX/RX Gain - TYPE: CID TYPE control. (BELLCORE/ETSI/DTMF) (This option can be shown only in INDIA.) - TX LEVEL: TX gain control (0-20) - RX LEVEL: RX gain control (-6-0) - DOWNLOAD: download adjusted CID TYPE and TX/TX gain to SP

[815] CUSTOMER DATABASE COPY

This enables the on-board system database (SYSDB) to be copied to the Media card
Database (MCDB) and also allows the MCDB to be copied to the SYSDB.
A daily save can be programmed to automatically save the SYSDB to the MCDB.
This ensures that an up-to-date database is always available in case of a catastrophic failure.
A daily save time of 00:00 means that no daily save is performed.

It is recommended that the MCDB is cleared before the SYSDB is copied to it.
When the SYSDB is copied to the MCDB there is no interruption in service.
If the MCDB is copied to the SYSDB, the system will reset to accept the new data.

MCDB (Media Card DataBase)

Option	Description
S:mm/dd/yy hh:mm	Indicates the time SYSDB was saved to the MCDB.
CLEAR MCDB	Clear MCDB.
COPY TO SYS	Copy MCDB to SYSDB.

SYSDB (System DataBase)

Option	Description
S:mm/dd/yy hh:mm	Indicates the time the SYSDB was last saved.
COPY TO MCDB	Copy SYSDB to MCDB.
DAILY SAVE hh:mm	The time the SYSDB will be saved to the MCDB.

[819] MEDIA CARD FILE CONTROL

Displays the size (in bytes) of various system program files on the Media card.
Also allows deletion of a file by selecting the file and pressing the HOLD key if system is
not OfficeServ 7100. Files included in Media are described below

OfficeServ 7200 (MCP, MP20)/7400 System

File Name	Description
STARTUP.INI	If a user designate an MP40/MCP program in MMC 818, related data are saved in this file. This file is initially not included but is created when the above programs are selected at MMC 818.
STARTUP.PRE	Startup file for OfficeServ 7200 system booting.
MPEVxxxx.PGM/MP PSVxxx.PGM	Program for MP40/MCP card. Since the MP40/MCP program is not installed on the MP40/MCP card itself, at least one MP40/MCP program must be included in Media to start the system.
LP4Vxxxx.PGM LPPVxxxx.PGM SP40Vxxx.PGM	LP40/LCP program. The LP40/LCP program is installed on the card itself. The one included in Media is used for software version upgrade. From V4.60 version, LP40 filename is changed from LP40Vxxx.PGM to SP40Vxxx.PGM.
PR2xxxxx.PGM	TEPRI2 program. The TEPRI2 program is installed on the card itself. The one included in Media is used for software version upgrade
PRIxxxxx.PGM	TEPRI program. The TEPRI program is installed on the card itself. The one included in Media is used for software version upgrade.
DATABASE.ENT/DA TABASE.SME	This file is created in Media when SYSDB is saved to SMDB by MMC 815. Initially not included, this file is created only when SMDB is created by MMC 815.

Others

File Name	Description
Startup.ini	If user designates an MCP program in MMC 818, related data are saved in this file. This file is initially not included but is created when the above programs are selected at MMC 818.
MSaaVbbb.pkg	MSP driver program This program must be included in MC card to start the system.
CSaaVbbb.pkg	MSP driver program This program must be included in MC card to start the system.
APaaVbbb.pkg	Application program. MP and VM module is included in this package.
DRaaVbbb.pkg	This package includes SP, MGI and other drivers.
RDaaVbbb.pkg	RAMDISK program
WSaaVbbb.pkg	WEB UI program
RTaaVbbb.pkg	Router program

File Name	Description
vm_l_xxx.tar	VM prompt
PRI	TEPRI program. The TEPRI program is installed on the card itself. The one included in Media Card is used for software version upgrade.
PRI2	TEPRI2 program. The TEPRI2 program is installed on the card itself. The one included in Media Card is used for software version upgrade
Tone_db.inf	Tond DB file for MGI and VM

[820] ASSIGN SYSTEM LINK ID

This MMC is used to assign the system link ID for PRI and VoIP networking. Up to 100 link IDs can be entered including SELF ID. In addition, each Link ID is associated with the IP address.

Option	Description
LINK ID	System ID for networking feature.
SIGNAL G/W	System IP address for VoIP networking.
TIME SYNC	System Time and date can be updated by QSIG Call
NODE NAME	System Node Name for VoIP networking
NO MGI	No: Use MGI as of old, Yes: Don't use MGI (This option can be shown in case that MMC 861 'MPS SERVICE' set to ENABLE)
CODEC	Preferentially used CODEC for SPNET
USE sRTP	Disable: Do not use sRTP, Enable: Use sRTP

CONDITIONS

'SELF' represents self-node, and must be set to use the networking function.
Items other than 'SELF' are used for station numbers and can be omitted.

DEFAULT DATA

NONE

ACTION

1) Press Transfer button and enter 820.
   Display shows:

MMC 301   ASSIGN STATION COS

[824] NETWORK DIAL TRANSLATION

Assigns the digit translation table used for networking. Generally, under networking conditions, you must dial the node ID and extension number to call the another node extension. In this MMC, the system provides a simple digit translation so that the user need only dial the extension number to call the station on the other node. The access digit needs to be programmed in MMC 724 ('LCR-01' parameter in NETWORK NUMBER option) first. The system allows 96 entries for network dial translation.

00	DATA TYPE	-	Type of data to be displayed
01	CURR STATUS	OFF	Current status of the LAN printer
02	EMPTY BUFF	NO	Prints all data left in the buffer
03	UPDATE LAN	NO	Applies modified values set in this MMC
04	DESTINATION	OFF	Data transmit destination (Off, Printer, PC, Both)
05	PRINTER IP	0.0.0.0	The IP address of the LAN printer
06	PRINTER TCP	09100	The TCP port of the printer
07	LAN TCP	10020	LAN TCP port
08	RETRY COUNT	03	Re-transmit attempt count (00~10)
09	RETRY WAIT	010 sec	Wait time for re-transmit (005~250 sec)
10	PJL ENABLE	FALSE	Sets PJL (0. FALSE, 1. TRUE)
11	LANGUAGE	RAW	Printer language (0. RAW, 1. PCL, 2. PS)
12	PAPER SIZE	LETTER	Paper size (0. A4, 1. LETTER)
13	FONT TYPE	COURIER	Font type (0. COURIER, 1. TIMES NEW ROMAN)
14	DUPLEX ENAB	FALSE	Sets duplex (0. FALSE, 1. TRUE)
15	ORIENTATION	PORTRAIT	Orientation (0. PORTRAIT, 1. LANDSCAPE)
16	PRINT TRAY	DEFAULT	Printer tray (0. Default, 1. Tray1, 2. Tray2, 3. Manual)
17	RESOLUTION	300	Resolution (0.300, 1.600)
18	LINE/PAGE	60	Lines per page

[830] LAN PARAMETERS

This MMC provides a mean to configure the Internet Protocol (IP) addressing of the MCP card.

No	Parameter	Description
00	SYSTEM IP ADDR	Specifies the IP address for the MCP card.
01	SYSTEM GATEWAY	Specifies the designated gateway IP address used for contacting IP devices beyond the local network subnet.
02	SYSTEM NET MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices (subnet) that are within 'direct reach' of the MCP. (without having to go through the designated network IP gateway)
03	SYSTEM RESET	Prompt to reset system MCP when system IP address is changed. This reset is same as FAST RESTART in MMC 811.
04	SYSTEM IP TYPE	Specifies if the system will be routing data over a public or private network.
05	SYS PUBLIC IP1	The MCP will originate communications to IP phones and VoIP connections outside the local network using this IP address. Communications to/from this IP will require involvement of the MGI card. The system identifies communications to/from this address as 'public'. This allows devices, on remote networks/subnets, to establish communications with the system, without exposing the LAN. See 'SYSTEM IP TYPE'.
07	SYS PUBLIC IP2	The MCP will originate communications to IP phones and VoIP connections outside the local network using this IP address. Communications to/from this IP will require involvement of the MGI card. The system identifies communications to/from this address as 'public'. This allows devices, on remote networks/subnets, to establish communications with the system, without exposing the LAN. See 'SYSTEM IP TYPE'.
08	SYS PUBLIC IP3	The MCP will originate communications to IP phones and VoIP connections outside the local network using this IP address. Communications to/from this IP will require involvement of the MGI card. The system identifies communications to/from this address as 'public'. This allows devices, on remote networks/subnets, to establish communications with the system, without exposing the LAN. See 'SYSTEM IP TYPE'.
10	SYSTEM MAC ADDR	For reference, and cannot be changed. The unique hardware (MAC) address of the MCP card.
12	SYSTEM IP VERS	Specify the system IP address is IPv4/IPv6 (This option may not be available in certain OfficeServ models.)
16	DATA SERVER IP	IP address of Data Server (This option may not be available in certain OfficeServ models.)

(Continued)

No	Parameter	Description
17	IP-UMS SERVER	Specify an IP UMS SERVER IP address. (This option may not be available in certain OfficeServ models.)
18	IP-UMS PORT	Specify an IP UMS SERVER port. (This option may not be available in certain OfficeServ models.)
19	IP-IVR SERVER	Specify an IP IVR SERVER IP address. (This option may not be available in certain OfficeServ models.)
20	IP-IVR PORT	Specify an IP IVR SERVER port. (This option may not be available in certain OfficeServ models.)
21	MASTER/SLAVE IP	Specify an Slave (extension Rack) IP address in OS7030. (This option may not be available in certain OfficeServ models.)
22	VCS PORT	IP address of NMS TRAP Server (This option may not be available in certain OfficeServ models.)
23	DNS SERVER1	IP address of DNS Server1.
24	DNS SERVER2	IP address of DNS Server2
28	NMS TRAP SERVER	IP address of NMS TRAP Server (This option may not be available in certain OfficeServ models.)
29	CTI SERVER ADDR	IP address of CTI Server
32	NEWS ADDRESS	IP address of News Server
33	EMAIL SERVER	Specify an EMAIL SERVER IP address. (This option may not be available in certain OfficeServ models.)
34	VCS SERVER ADDR	Specify an MMS SERVER IP address. (This option may not be available in certain OfficeServ models.)
35	VCS WEB SERVER	Specify an MMS WEB SERVER IP address. (This option may not be available in certain OfficeServ models.)
36	IMPS SERVER ADDR	Specify an IMPS SER SERVER IP address. (This option may not be available in certain OfficeServ models.)
37	QoS CHECK SERVER	Specify a QoS CHECK SERVER IP address. (This option may not be available in certain OfficeServ models.)

NOTE

LAN PARAMETERS

- The first three parameters: SYSTEM IP ADDR, SYSTEM GATEWAY, and SYSTEM NET MASK are stored separately from the main system database and thus will not be defaulted when MMC811 'CLEAR MEMORY' is performed. Furthermore, any changes to these parameters will not be applied until the MP card is reset.

- When changing any IP address/value, three digits must be entered for each (octet) field. For example 192.168.1.10 should be entered as: 192 168 001 010.

CONDITIONS

- This MMC must be used if there are ITP phones and/or MGI cards on the system.

- After changing LAN parameters, restart the system to apply the new settings.

ACTION

DISPLAY

1) Press Transfer button and enter 830.
   Display shows the system IP address.

```
SYSTEM IP ADDR
165.213. 97.185
```

2) Press Volume button to make selection and Press
   Right Soft button to move cursor.

```
SYSTEM IP ADDR
165.213. 97.185
```

3) Using the keypad, enter 3-digit IP numbers.
   (e.g. 192 168 001 010 for 192.168.1.10)
   Cursor will return to step 1 upon completion of IP
   address entry.

```
SYSTEM IP ADDR
192.168.001.010
```

4) Press Volume button to make selection and Press
   Right Soft button to move cursor.

```
SYSTEM GATEWAY
165.213. 97. 1
```

5) Using the keypad, enter 3-digit IP numbers.
   (e.g. 192 168 001 001 for 192.168.1.1)
   Cursor will return to this step on completion of system
   gateway entry.

```
SYSTEM GATEWAY
192.168.001.001
```

6) Press Volume button to make selection and press Right
   Soft button to move cursor.

```
SYSTEM RESTART
ARE YOU SURE? NO
```

7) Press Volume button to make selection and press Right
   Soft button to store and move cursor.

```
SYSTEM RESTART
ARE YOU SURE? NO
```

8) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

[831] MGI PARAMETERS

This MMC provides network configuration of MGI/OAS card(s) in the system.

No	Parameter	Description
0	IP ADDRESS	Specifies the IP address for the MGI card.
1	GATEWAY	Specifies the designated IP gateway address used for contacting IP devices beyond the local subnet.
2	SUB MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices (subnet) that are within 'direct reach' of the MGI. (without having to go through the designated network IP gateway)
3	IP TYPE	Specifies if the system will be routing data over a public or private network.
4	LOCAL RTP	Specifies local rtp port The default value is 30000 and the value range is between 10000 and 60000. If you use MPS function, the value must be not duplicated with MMC 861 MPS local rtp port. This option is only shown in case of installed MGI 64/MGI 16 card
5	CARD RESET	Reboots MGI card. (This option may not be available in certain OfficeServ models.)
6	PUB IP1	Public IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
7	PUB RTP1	Public RTP Port which NAT system binds a private RTP port with
8	PUB IP2	Public IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
9	PUB RTP2	Public RTP Port which NAT system binds a private RTP port with
10	PUB IP3	Public IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
11	PUB RTP3	Public RTP Port which NAT system binds a private RTP port with
12	QOS MONIT.	Specifies use of QOS. This option is only shown in case of installed MGI card. (This option may not be available in certain OfficeServ models.)
13	MAC ADDR	Displays the MAC address of an MGI card. This option is only shown in case of installed MGI 64/MGI 16 card (This option may not be available in certain OfficeServ models.)
14	IP VERSION	Specifies MGI IP version is IPv4/IPv6. (This option may not be available in certain OfficeServ models.)

> **NOTE**
>
> If MP-MGI port (the embedded MGI) is selected, parameters such as IP ADDRESS, GATEWAY, SUB MASK, CARD RESET can not be set in this MMC because these parameters and the system values are the same. The system values can be referred in MMC 830.

> **NOTE**
>
> **MGI PARAMETERS**
>
> - IP ADDRESS, GATEWAY, and SUB MASK-any changes to these parameters will not be applied until the MGI card is reset.
>
> - When changing any IP address/value, three digits must be entered for each (octet) field. For example, 192.168.1.10 should be entered as 192.168.001.010.

CONDITIONS

This MMC cannot be accessed unless there is an MGI card installed in the system.

ACTION   DISPLAY

1) Press Transfer button and enter 831.
   Display shows the first MGI card.

   ```
   [3801] IP ADDRESS
   168.219. 76.101
   ```

2) Enter MGI number.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

   ```
   [3801] IP ADDRESS
   168.219. 76.101
   ```

3) Enter MGI parameter number.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

   ```
   [3801] IP ADDRESS
   168.219. 76.101
   ```

4) Enter MGI parameter.
   OR
   Press Right Soft button to move cursor.

   ```
   [3801] IP ADDRESS
   165. 10. 1.100
   ```

5) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

NONE

[832] VoIP ACCESS CODE

Provides a means to apply the Internet Protocol (IP) address to the VoIP gateway.
This MMC also assigns the number of channels that can be used for IP faxes.

TABLE (000~250): Outbound or Inbound table used for specific access codes.
Usually when the MCP2 card is used as a VoIP gateway, the Outbound table is used.
The Inbound table is used to determine the number of digits to receive before processing
the call. Each table has only 1 entry.

No	Option	Description
0	ACCESS DGT	This is the access code that is used once the VoIP gateway is accessed; this directs a call based on the routing tables used. An access code table then references an access code and correlates an IP address to the access code for routing. A maximum of eight digits or alpha-numeric characters are available.
1	INSERT DGT	Digit(s) to insert for routing at the destination. This can be used when different numbering plans exist or if a dial 9 access is to be inserted in the dialed digits.
2	DGT LENGTH	This field requests the number of digits that are expected to be received to make up the whole access code.
3	DEL.LENGTH	This is the number of digits to delete after receiving the access code. If no digits are deleted the access code will be sent as part of the call to the destination to continue routing.
4	IP TABLE	This is the first table referenced for routing the access code to an IP address. The system has 251 IP tables (000~250) with 4 entries (1~4) in each table. See MMC 833.
6	SERVER USE	When using H.323 trunking, this option specifies the use of GateKeeper for the corresponding access (This option is applied only when GK ROUTING is enabled in program 836.) It is also used when using SIP trunking. When using SIP trunking via SIP proxy/SIP server (as with the case of a SIP provider), this option should be set to YES to enable. When enabled, SIP trunking will follow settings in MMC 837 and MMC 832/833 will not be used. If using SIP trunking to another SIP gateway (SIP peering), then this option should be set to NO to disable it. If disabled, then mmc 832/833 will be applied and mmc 837 will not be applied.

ENTERING ACCESS DGT

The characters which are related to VoIP are limited. So it is different to entering special characters in normal case. Refer to the below.

> **Volume Up/Down keys**
>
> When the character you want appears on the same dial pad key as the previous character, press the Volume Up button to move the cursor to the right or the Volume Down button to move the cursor to the left. A space can be entered using these keys.

COUNT	1	2	3	4	5
DIAL 0	0				
DIAL 1	1				
DIAL 2	A	B	C	2	-
DIAL 3	D	E	F	3	-
DIAL 4	G	H	I	4	-
DIAL 5	J	K	L	5	-
DIAL 6	M	N	O	6	-
DIAL 7	P	Q	R	7	-
DIAL 8	T	U	V	8	-
DIAL 9	W	X	Y	Z	9
DIAL *	-				

The # button can be used for the following special characters:
!, $, %, &, *, (,), _, +, ?, -, =, ., /, ;

DEFAULT DATA

[833] VoIP IP TABLE

This MMC provides the IP addresses in tables pointed to by the VoIP code entry (MMC 832). There are 251 tables with up to 1 entry each. The destination IP address is required to route dialed digits based on the access code and digits dialed. The IP entry field is divided into 4 sections allowing modification of separate IP address fields.

	When changing IP
NOTE	When changing any IP address/value, listed below, three digits must be input for each (octet) field. Example 192.168.1.10 input must be: 192 168 001 010

No	Option	Description
00	IP ADDR 1	This indicates the first entry of each destination IP address table.
04	PROTOCOL	Default value is SIP. Set PROTOCOL to H323 when the table is used for H323 signaling.
06	ALIVE CHK	Set ALIVE CHK to OPTION when the link test is required. When set, system sends OPTIONS message to the destination SIP Server.
08	USER INFO	Alphanumeric System username of To and From header in OPTIONS message. When empty, system does not send OPTIONS message to the Destination SIP Server.
09	RMT PORT	Sets the port to use on the SIP Server.
10	CHK TIMER	When ALIVE CHK is set, CHK TIMER decides the message sending time interval.
11	ALIVE STS	ENTRY1 AVAIL:YES
12	SIG TYPE	This indicates the transport type in SIP message Signaling. SIP message can be transported either using UDP or TCP. (This option may not be available in certain OfficeServ models.)
13	RS TO TAG	Set response to tag. (Keep/Change)
14	CON REUSE	Set connection reuse option. (Disable/Enable)
15	CON TMOUT	Set connection time. (default: 1800)
16	VOIP TNDM	Set VoIP Tandem option. If this option is disabled, SIP/H.323 incoming call can't make an outgoing call using another SIP/H.323 trunk.
17	TITLE	Input description of VoIP table.

DEFAULT DATA

[834] H.323 OPTIONS

This MMC provides various VoIP support options. The options set in this MMC apply system wide.

> **MMC [834]**
>
> This program may not be available in certain OfficeServ models.
>
> **NOTE**

No	Parameter	Description	Default
00	GATEWAY CALL ID	Numeric identifier for system (up to 12 digits)	1234
01	H.323 FAST SETUP	Enables or disables the H.323 Fast Start call setup method.	ENABLE
02	CALLER ID TYPE	This option controls the calling party identification type. There are 3 possible selections: 0 GWID: shows the gateway call ID. 1 ANI: shows the calling station number 2 IP: shows the calling H.323 gateway IP address.	ANI
06	TUNNELING	Enables or disables the need for additional channels using H.245 Signaling. Tunneling allows use of the H.245 signal channel with the Q.931 channel.	ENABLE
07	DEFAULT DIL NO	This allows programming of the default direct-in-line number when digits are missing or incorrect on an inbound call.	500
11	CODEC AUTO NEGO	Enables or disables Auto CODEC Negotiation when the MGI is used as an H.323 gateway.	ON
14	SIGNAL PORT	Indicate the port number for H.323 Signaling and sets a range of numbers allowed by firewall equipment. The common and default IP path or port used is 10000.	10000
17	SEND CLIP TABLE	Refers to SEND CLI NUMBER (MMC 323), which provides calling party identification when using the MGI as a H.323 gateway. This provides station ID of the calling station. A single-digit value corresponding with the desired table in MMC 323 should be entered here. This is only used when MMC 405 value is null.	1
18	INCOMING MODE	This option selects how incoming calls are routed when the MGI is used as a H.323 gateway. 0 FOLLOW TRUNK RING: Follows MMC 406 1 FOLLOW DID TRANS: Follows MMC 714 2 FOLLOW INCOM DGT: Follows MMC 724	FOLLOW DID TRANS

(Continued)

No	Parameter	Description	Default
19	ALLOW GW CHECK	When using a gatekeeper, this permits the H.323 gateway to check for gatekeeper presence.	DISABLE
20	CLIR WITH NUMBER	When this option is enabled, the CLIP number is sent to the network even if the CLIP restriction flag is set.	DISABLE
21	USE OVERLAP DIAL	Enables use of overlap dialing.	ENBLOC

[835] MGI DSP OPTIONS

This MMC provides various MGI options.

MGI 16/64 Card and embedded MGI and CNF24 parameters

No	Parameter	Description	Default
00	AUDIO CODEC	Selects the Audio Codec of an MGI card and specify the transmission interval time of the VoIP packet.	G.711
01	ECHO CANCEL	Enables or disables echo cancellation. This function removes the echo that is generated by voice reflection and packet delay.	ENABLE
02	DUAL-FLT EC	This option selects the Mode of Dual Filter echo cancellation. It is improved echo cancellation. This should be set by Analog Trunk card. If mode is selected to Disable (Sparse EC), system should be reset.	8TRK2 MODE
03	NLP	This option controls the non-linear processor. Set NLP value (0~2). - 0: Normal level of NLP engagement. (Default) - 1: NLP Tune Option 2 (Reduced level of NLP engagement). - 2: NLP Tune Option 1 (Increased level of NLP engagement). NLP Tune Option 2 (Reduced level of NLP engagement). For applications where the default NLP level causes unpleasant voice artifacts (like choppiness at the beginning of the call in heavy double talk situations), the Host may select the NLP Tune Option 2 setting to reduce the level of NLP engagement. NLP Tune Option 1 (Increased level of NLP engagement). For certain 2-to-4 wire hybrid or line conditions where a larger than normal non-linear component in the echo is present, the Host may select the NLP Tune Option 1 setting for an increased level of NLP engagement in order to provide an adequate echo control performance. The normal non-linear echo component is defined to be at a level comparable to that from G.711 companding (for example, in G.168, the only non-linear component considered in the echo is G.711 companding only). NOTE: This option take effect only when EC is ON.	0
04	EC GAIN	This option is used to program the digital gain control for the Mindspeed Comcerto Device 'Decoder-to-EC' signal path, when voice decoding is active. Set EC gain value. The range is 18~38 (-14~+6 dB)	-

(Continued)

No	Parameter	Description	Default
05	EC TAIL LEN	Network Echo Canceller Tail Length (HECLEN). Used to set the Echo Canceller configuration. Echo Canceller Tail Length is adjustable from 8 ms to 128 ms, in 8 ms increments. Set EC Tail length. The range is 8~128 ms.	64 ms
07	SILENCE SUP	This parameter determines whether silence suppression is used. This prevents transmission during the silence period of a call, and conserves bandwidth when enabled.	DISABLE
08	TO RTP GAIN	PCM input gain value of DSP. Direction is from PCM to Packet. The range is 18~38 (-14~+6 dB) This set the quality of PCM voice from the VoIP DSP to the site. Default is 32 (0 dB).	32 (0 dB)
09	TO PCM GAIN	This value selects the voice volume. Direction is from Packet to PCM. The range is 18~38 (-14~+6 dB)	32 (0 dB).
10	MIN JITTER	Decides the minimum time to consider delay for jitter adjustment. The range is 0~150 ms	30 ms
11	MAX JITTER	Decides the maximum time to consider delay for jitter adjustment. The range is 30~200 ms.	150 ms
12	JITTER AP	The Adaptation Period controls the speed at which the jitter buffer can adapt downwards when current network conditions allow. The larger the value, the slower the jitter buffer adapts down, when jitter decreases. The value is programmed in milliseconds, with a default of 10000 ms (10 seconds) and a minimum value of 1000 ms (1 second).	1 sec
13	JITTER AT	When the jitter buffer grows past the Deletion Threshold, frames exceeding the deletion threshold are deleted immediately. Audio quality may be negatively affected. This parameter is expressed in milliseconds, and may be programmed from the value of the DelayMax up to 500 ms. The range is 150~500 ms.	250 ms
14	FAX OPTION	This option selects the mode of FoIP. Fax protocols are as below. 0. T.38: Fax service through T.38. 1. VBD: Fax service through Voice Band Data operation. It supports fax service without NLP and Jitter Buffer operation. 2. PASS THROUGH: Fax service through G.711 alaw/ulaw. (This option is not available in CNF24.)	T.38

No	Parameter	Description	Default
15	FAX REDUND.	This option selects retry count of Fax-over-IP if errors are detected. The range is 0~3 (0 means no retry). (This option is not available in CNF24.)	3
16	FAX ECM	This option selects retry of Fax-over-IP if errors are detected. (This option is not available in CNF24.)	ENABLE
18	RTCP PERIOD	This option selects the interval time for sending RTCP.	5 sec
19	TOS/DifServ	An 8-bit binary value that will be used by external routers, switches, etc, (that optionally support TOS-bit prioritization) to identify the transport-priority value of data packets generated by the MGI card. This value can be left at the default value (00000) if your network infrastructure does not support this method of bandwidth management.	All bits 0
20	802.1 p/q	Each created channel may be given its own Ethernet header provided that the Comcerto MAC address is unique. When sending a payload Ethernet frame, each channel uses its own Ethernet header (if it has one). This option is enable or disable for 802.1 p/q. (including 802.1 VLAN and 802.1 Priority) NOTE: These options apply to RTP/RTCP. (This option is not available in CNF24.)	Disable
21	802.1 P	Set the 802.1 priority. The range is 0~7. (This option is not available in CNF24.)	0
22	802.1 VLAN	Set the VLAN tag. The range is 0~ 4095. (This option is not available in CNF24.)	0
23	G711 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	20 ms
24	G729 FRAME	specify the transmission interval time of the VoIP packet for G.719 codec	20 ms
25	G729s FRAME	specify the transmission interval time of the VoIP packet for G.729a codec	20 ms
26	G723 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	30 ms
27	USE sRTP	Set sRTP option. Disable: Do not use sRTP, Enable: Use sRTP	DISABLE

MGI Card parameters

No	Parameter	Description	Default
00	AUDIO CODEC	Selects the Audio Codec of an MGI card.	G.729A
01	ECHO CANCEL	Enables or disables echo cancellation. This function removes the echo that is generated by voice reflection and packet delay.	ENABLE
02	SILENCE SUP	This parameter determines whether silence suppression is used. This prevents transmission during the silence period of a call, and conserves bandwidth when enabled.	DISABLE
03	IN FILTER	This option selects input filtering of the DSP. This should always be set to ENABLE.	ENABLE
04	OUT FILTER	This option selects output filtering of the DSP. This should always be set to ENABLE.	ENABLE
05	TO RTP GAIN	PCM input gain value of DSP. The range is 0~63 (-31~31 dB). This set the quality of PCM voice from the VoIP DSP to the site. Default is 32 (0 dB).	32 (0 dB)
06	TO PCM GAIN	This value selects the voice volume. The range is 0~63 (-31~31 dB).	32 (0 dB)
07	JITTER OPT	This is a scale value that introduces a intentional buffer (delay) of the transmission of VoIP packets generated by the MGI card. This value determines whether the focus is on packet loss or packet delay. The range is 00~12.	4
08	MIN JITTER	Decides the minimum time to consider delay for jitter adjustment. The range is 010~300 ms	30 ms
09	MAX JITTER	Decides the maximum time to consider delay for jitter adjustment. The range is 010-300 ms.	150 ms
10	RTP LOSS TM	This option selects the interval time for sending RTCP.	5 sec
11	T38 FAX USE	This option selects the mode of FoIP. If selct Enable, fax protocol is T.38. In other case, fax protocal is G.711 pass through. (This mode should be use G.711 codec)	ENABLE
12	T38 REDUND.	This option selects retry count of Fax-over-IP if errors are detected. The range is 0~4 (0 means no retry).	2
13	FAX ECM	This option selects retry of Fax-over-IP if errors are detected.	ENABLE
14	MAX FAX CNT	This is the maximum number of channels that can be simultaneously used for Fax-over-IP. The range is 00~04.	2
15	DTMF TYPE	There are two types of DTMF transmission: INBAND, which is industry standard (H.245) type DTMF transport, and OUTBAND which is a Samsung proprietary method.	OUTBAND

No	Parameter	Description	Default
16	TOS/DifServ	An 8-bit binary value that will be used by external routers, switches, etc, (that optionally support TOS-bit prioritization) to identify the transport-priority value of data packets generated by the MGI card. This value can be left at the default value (00000) if your network infrastructure does not support this method of bandwidth management.	All bits 0
17	G711 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	20 ms
18	G729 FRAME	specify the transmission interval time of the VoIP packet for G.719 codec	20 ms
19	G729a FRAME	specify the transmission interval time of the VoIP packet for G.729a codec	20 ms
20	G723 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	30 ms

SVMi-20i Card parameters

No	Parameter	Description	Default
00	AUDIO CODEC	Selects the Audio Codec of and SVMi-20i card.	G.711
01	ECHO CANCEL	Enables or disables echo cancellation. This function removes the echo that is generated by voice reflection and packet delay.	ENABLE
02	DUAL-FLT EC	This option selects the Mode of Dual Filter echo cancellation. It is improved echo cancellation. This should be set by Analog Trunk card. If mode is selected to Disable (Sparse EC), system should be reset.	8TRK2 MODE
03	NLP	This option controls the non-linear processor. Set NLP value (0~2). - 0: Normal level of NLP engagement. (Default) - 1: NLP Tune Option 2 (Reduced level of NLP engagement). - 2: NLP Tune Option 1 (Increased level of NLP engagement). NLP Tune Option 2 (Reduced level of NLP engagement). For applications where the default NLP level causes unpleasant voice artifacts (like choppiness at the beginning of the call in heavy double talk situations), the Host may select the NLP Tune Option 2 setting to reduce the level of NLP engagement. NLP Tune Option 1 (Increased level of NLP engagement): For certain 2-to-4 wire hybrid or line conditions where a larger than normal non-linear component in the echo is present, the Host may select the NLP Tune Option 1 setting for an increased level of NLP engagement in order to provide an adequate echo control performance. The normal non-linear echo component is defined to be at a level comparable to that from G.711 companding (for example, in G.168, the only non-linear component considered in the echo is G.711 companding only). This option takes effect only when EC is ON.	0
04	EC GAIN	This option is used to program the digital gain control for the Mindspeed Comcerto Device 'Decoder-to-EC' signal path, when voice decoding is active. Set EC gain value. The range is 18~38 (-14~+6 dB)	32 (0 dB)
05	EC TAIL LEN	Network Echo Canceller Tail Length (HECLEN). Used to set the Echo Canceller configuration. Echo Canceller Tail Length is adjustable from 8 ms to 128 ms, in 8 ms increments. Set EC Tail length. The range is 8~128 ms.	64 ms

No	Parameter	Description	Default
06	SILENCE SUP	This parameter determines whether silence suppression is used. This prevents transmission during the silence period of a call, and conserves bandwidth when enabled.	DISABLE
07	TO RTP GAIN	PCM input gain value of DSP. Direction is from PCM to Packet. The range is 18~38 (-14~+6 dB) This set the quality of PCM voice from the VoIP DSP to the site. Default is 32 (0 dB).	32 (0 dB)
08	TO PCM GAIN	This value selects the voice volume. Direction is from Packet to PCM. The range is 18~38 (-14~+6 dB)	32 (0 dB)
09	MIN JITTER	Decides the minimum time to consider delay for jitter adjustment. The range is 0~150 ms	30 ms
10	MAX JITTER	Decides the maximum time to consider delay for jitter adjustment. The range is 30~200 ms.	150 ms
11	JITTER AP	The Adaptation Period controls the speed at which the jitter buffer can adapt downwards when current network conditions allow. The larger the value, the slower the jitter buffer adapts down, when jitter decreases. The value is programmed in milliseconds, with a default of 10000 ms (10 seconds) and a minimum value of 1000 ms (1 second).	1 sec
12	JITTER AT	When the jitter buffer grows past the Deletion Threshold, frames exceeding the deletion threshold are deleted immediately. Audio quality may be negatively affected. This parameter is expressed in milliseconds, and may be programmed from the value of the DelayMax up to 500 ms. The range is 150~500 ms.	250 ms
13	RTCP PERIOD	This option selects the interval time for sending RTCP.	5 sec
14	TOS/DiffSrv	An 8-bit binary value that will be used by external routers, switches, etc, (that optionally support TOS-bit prioritization) to identify the transport-priority value of data packets generated by the MGI card. This value can be left at the default value (00000) if your network infrastructure does not support this method of bandwidth management.	All bits 0
18	G711 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	20 ms
19	G729 FRAME	specify the transmission interval time of the VoIP packet for G.719 codec	20 ms

(Continued)

No	Parameter	Description	Default
20	G729a FRAME	specify the transmission interval time of the VoIP packet for G.729a codec	20 ms
21	G723 FRAME	specify the transmission interval time of the VoIP packet for G.711 codec	30 ms
26	T38 FAX USE	This option selects the mode of FoIP. If selct Enable, fax protocol is T.38. In other case, fax protocal is G.711 pass through. (This mode should be use G.711 codec)	ENABLE
27	FAX REDUND	This option selects retry count of Fax-over-IP if errors are detected. The range is 0~3 (0 means no retry). (This option is not available in CNF24.)	3
28	FAX ECM	This option selects retry of Fax-over-IP if errors are detected.	ENABLE
29	USE sRTP	Set sRTP option. Disable: Do not use sRTP, Enable: Use sRTP	DISABLE

DEFAULT DATA

SEE DESCRIPTION

ACTION

1) Press Transfer button and enter 835.
   Display shows the first option.

2) Enter MGI type (0~4) via dial keypad.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

3) Enter MGI DSP parameter via dial keypad.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

4) Enter MGI DSP parameter.
   OR
   Press Volume button to make selection and press
   Right Soft button to save and return to step 3.

5) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

MMC 831   MGI PARAMETERS

[836] H.323 GK OPTIONS

Provides a means to set the H.323 gatekeeper parameters for an optional, external industry-standard H.323 network gatekeeper, using Registration, Admissions and Status Signaling (RAS). The settings apply system wide.

When changing IP

When changing any IP address/value, listed below, three digits must be input for each (octet) field. Example 192.168.1.10 input must be: 192 168 001 010

NOTE

MMC [836]

This program may not be available in certain OfficeServ models.

NOTE

No	Parameter	Description	Default
00	GK CONNECTION	This enables the H.323 call to connect to a gatekeeper.	DISABLE
01	GK REGISTERED	Display the status of registration to the Gatekeeper.	NO
02	GK ROUTING	This enables routing of calls through a gatekeeper.	DISABLE
03	GK RAS TYPE	Select if AUTO or MANUAL, depending on your gatekeeper's capabilities.	AUTO
04	GK IP ADDRESS	This is the gatekeeper's IP address.	0.0.0.0
05	ALTER GK IP ADDR	This provides an alternate gatekeeper address.	0.0.0.0
06	GK NAME	This is the alphanumeric identifier of the gatekeeper. (Up to 16 characters.)	'Gatekeeper'
07	H.323 ID	This is the H.323 identifier used by the MGI when registering with the gatekeeper. (Up to 32 characters.)	'OfficeServ'
08	E.164 ID	This is the E.164 identifier used by the H.323 trunk when registering with the gatekeeper. (Up to 16 digits long.)	1234
09	GK KEEP ALIVE	This is the timer that the MGI uses to acknowledge the presence of the gatekeeper. The range is 000~999 seconds.	0 SEC
10	GK DOWN ROUTE	This provides an alternate route if the primary gatekeeper is down. Selections are PSTN or ALTER GK.	PSTN
11	URQ REASON MODE	Select ON or OFF for use of Un-register Request RAS (URQ) messages.	ON
12	RRQ FAIL TIME	Programs the time frame to re-send Registration Request RAS (RRQ) messages to a gatekeeper. The range is 1~99.	30 seconds

No	Parameter	Description	Default
13	GRQ SEND	Select ON or OFF for use of Gatekeeper RAS Request (GRQ) messages.	OFF
14	USE MULTI E.164	When this option is set to ENABLE, the E.164 identifier can be assigned.	DISABLE
15	E.164 LISTS	This is the E.164 identifier used by the H.323 trunk when registering with the gatekeeper. There is a maximum 32 E.164 identifier lists with a digit string length of 16 digits.	NONE

ENTERING GK NAME, H.323 ID

The characters which are related to VoIP are limited. So it is different to entering special characters in normal case. Refer to the below.

NOTE

Volume Up/Down keys

When the character you want appears on the same dial pad key as the previous character, press the Volume Up button to move the cursor to the right or the Volume Down button to move the cursor to the left. A space can be entered using these keys.

COUNT	1	2	3	4	5
DIAL 0	0				
DIAL 1	1				
DIAL 2	A	B	C	2	-
DIAL 3	D	E	F	3	-
DIAL 4	G	H	I	4	-
DIAL 5	J	K	L	5	-
DIAL 6	M	N	O	6	-
DIAL 7	P	Q	R	7	-
DIAL 8	T	U	V	8	-
DIAL 9	W	X	Y	Z	9
DIAL *	-				

The # button can be used for the following special characters:

!, $, %, &, *, ( ), _, +, ?, -, =, ., /, ;

MMC 834   H.323 OPTIONS

[837] SIP OPTIONS

This MMC permits the adjustments of optional Session Initiation Protocol (SIP) trunk parameters. The MCP supports SIP and H.323 on a per-call-per-port basis. The settings are system wide.

> **When changing IP**
>
> When changing any IP address/value, listed below, three digits must be input for each (octet) field. Example 192.168.1.10 input must be: 192 168 001 010

SIP Stack Configuration

No	Parameter	Description	Default
00	RE-TRANS. T1	The initial re-transmission time if there is no answer, based on the RFC2543 specification. The range is 0~9900 ms.	500 ms
01	RE-TRANS. T2	The maximum re-transmission time if there is no answer, based on the RFC2543 specification. The range is 0~9900 ms.	4000 ms
02	RE-TRANS. T4	The time the User Agent Server waits after receiving the ACK message. Based on the RFC2543 specification. The range is 0~9900 ms.	5000 ms
03	GENERAL RING	The server retransmits the response for this length of time until the requested retransmission is received. For example, the wait time after sending 200 OK for INFO. The range is 0~99900 ms.	5000 ms
04	INVITE RING	After the client sends ACK for the INVITE Final Response, the client cannot confirm if the server received the ACK message. The client waits for this length of time after sending ACK for the Final Response. The range is 0~99900 ms.	5000 ms
05	PROVISIONAL	After receiving the Provision Response, the User Agent waits for this length of time until Timeout ends. The range is 0~999900 ms.	180000 m
06	INV NO RESP	Before sending Cancel for the Invite Request, the User Agent waits for this length of time. The range is 0~99900 ms.	5000 ms
07	GEN NO RESP	Before sending Cancel for General Request, the User Agent waits for this length of time. The range is 0~99900 ms.	5000 ms
08	REQ RETRY	After sending General Request, the User Agent waits for the Final Response for this length of time. The range is 0~99900 ms.	5000 ms

SIP Extension Configuration

No	Parameter	Description	Default
00	SIGNAL PORT	Sets the UDP port used for a SIP station call.	5060
01	IP-UMS PORT	Sets the UDP port used for IP-UMS calls.	5070
02	EXPIRE TIME	This indicates how long each registration from SIP stations will be valid. SIP stations will send the next REGISTER message before this time is passed.	600
03	NAT REG EXP	Specifies the expiration time for SIP stations located under NAT.	600
04	SIP ALG	If SIP ALG is set to Enable, the system can use SIP ALG (Application Level Gateway) function. (This option may not be available in certain OfficeServ models.)	Disable
06	RESP TO TAG	Set response to tag. (KEEP/CHANGE)	KEEP
07	CONN REUSE	Set connection reuse	DISABLE
08	MUTUAL TLS	Set mutual TLS	DISABLE
09	NO TLS AUTH	If it is set to Enable, TLS Authentication is not needed.	DISABLE
10	TCP PORT	Set TCP Port	05060
11	TLS PORT	Set TLS Port	05061
12	SESSION TMR	This is the timer value which is used when exchanging the message periodically to maintain the session if one session is set. Whether to use the session timer is determined according to each SIP server. Using the default value is recommended.	NONE
13	SESSION EXP	Indicates the Expire Time in Session Timer. In general, the value given by the SIP server is used. Using the default value is recommended.	001800

SIP Trunk Configuration

No	Parameter	Description	Default
00	DEFAULT ISP	This field indicates the default SIP Carrier that will be used for SIP trunking	1
01	iBG EXPIRE	When interacting with iBG, iBG sends REGISTER message to system for link test purpose. The iBG EXPIRE value indicates the expiration time for the iBG's registration.	10
04	INCOM MODE	This option selects how incoming calls are routed when the MGI is used as a SIP gateway. 0. FOLLOW DID TRANS: Follows MMC 714 (default) 1. FOLLOW INCOM DGT: Follows MMC 724 2. FOLLOW TRUNK RING: Follows MMC 406	FOLLOW DID

No	Parameter	Description	Default
05	PEER CLIPTB	Refers to SEND CLI NUMBER (MMC 323), which provides calling party identification when sending out a SIP peering call.	1
06	RCV CLI FWD	In case outgoing SIP Call, if receiver dose not want display CLI, set this option to ENABLE and dose not send CLI information.	Disable
07	EXCLUSIVE	In V4.60, this option is moved from SIP Extension to SIP Trunk configuration and one more option (NO RESPONSE) is added. In addition OfficeServ system blocks the IP address for specified period in case system gets wrong User ID or Password of a SIP phone several times when an SIP phone tries to register to system.	NONE

V4.42 to V4.5x	V4.60	Description
DISABLE	NONE	System will allow all SIP calls.
ENABLE	RESPONSE	System will not allow SIP calls from unauthorized IP to go through OfficeServ system via SIP trunk/Peering by sending deny message (403 forbidden).
-	NO RESPONSE	System will ignore all the SIP messages from unauthorized IP address and block the relevant IP address. Beside, system blocks the IP address for specified period in case system gets wrong User ID and Password of an SIP phone several times when a SIP phone tries to register to system.

No	Parameter	Description	Default
08	COMM BLK TM	This option is for SIP common message block time. SIP messages except REGISTER will be blocked after this common block time.	00600
09	REGI BLK TM	This option is for SIP REGISTER message block time. REGISTER message will be blocked after this register block time.	00060
10	REGI RETRY	This option indicates the number of incoming REGISTER message. If REGISTER message comes to the system over this retry count, system will block this message.	2
11	CODEC PR1	SIP trunk selectable codec 1	G.729

No	Parameter	Description	Default
12	CODEC PR2	SIP trunk selectable codec 2	G.711a
13	CODEC PR3	SIP trunk selectable codec 3	G.711u
14	CODEC PR4	SIP trunk selectable codec 4	DISABLE
15	PEER MAX CH	This option indicates SIP trunk max channel number.	224
16	OUT ORG CDC	If this option is set to Enable and there's an outgoing SIP trunk call, current call will follow opposite phone's codec.	DISABLE
17	INC FIX CDC	If this option is set to Enable and there's an incoming SIP trunk call, current call will follow codec of ISP DB.	DISABLE
18	PEER ALIAS	If this option is set to Enable, system sends Alias name of peering call.	DISABLE

SIP Carrier Configuration

No	Parameter	Description	Default
00	SIP CARRIER	Alphanumeric Name of SIP Carrier This indicates the ISP carrire name. User can set this value, but the value doesn't affect to work of system.	-
01	SIP SERVER	Sets ENABLE or DISABLE to interact with external SIP Server.	DISABLE
02	SVC AVAIL	Displays the OfficeServ's registration status with the external SIP server/SIP carrier.	NO
03	REGIST ADDR	Designate the Domain Name or the IP Address of the SIP Registrar. If the domain name value is entered here, the DNS query is executed, and through this, the IP address of the Registrar server is acquired.	NONE
04	REGIST PORT	Sets the port to use on the Registrar Server.	5060
05	OUT PROXY	Designates the Domain Name or the IP Address of the SIP Server. If the domain name value is entered here, the DNS query is executed, and through this, the IP address of the SIP Server is acquired.	NONE
06	ALTER PROXY	Designates the Alternate Proxy IP Address which is used if the primary SIP server fails.	0.0.0.0
07	PROXY PORT	Sets the port to use on the SIP Server.	5060
08	PROXY NAME	Domain name which is set for the user authentication when using the SIP server	NONE
09	LOCAL NAME	Local Domain Name	NONE
11	DNS SERVER1	Designates the IP address of any external name server (DNS server). The DNS server resolves the SIP server name to an IP address (This option may not be available in certain OfficeServ models.).	0.0.0.0

No	Parameter	Description	Default
12	DNS SERVER2	Designate the alternative name server which is used when the name server designated in the DNS server1 fails. (This option may not be available in certain OfficeServ models.)	0.0.0.0
13	USER NAME	Alphanumeric System username when registering as a trunking gateway. When empty, system does not send REGISTER message to interacting Outbound SIP Server.	4100
14	AUTH USER	This is the username which is used if the authentication is required from the SIP server. This is the item which is used for registering the representative number.	NONE
15	AUTH PSWD	This is the password which is used if the authentication is required from the SIP server. This is the item which is used for registering the representative number.	NONE
16	REG PER USER	When interacting with the SIP Server, if this is enabled, registration is made on per user bases. Otherwise, system will perform representative registration.	DISABLE
17	SESSION TIMER	This is the timer value which is used when exchanging the message periodically to maintain the session if one session is set. Whether to use the session timer is determined according to each SIP server. Using the default value is recommended.	NONE
18	SESSION EXP	Indicates the Expire Time in Session Timer. In general, the value given by the SIP server is used. Using the default value is recommended.	1800 sec
19	TRK REG EXP	The Expire Time exists in periodical registration to the SIP server. In general, the value given by the SIP server is used. Using the default value is recommended.	1800 sec
20	ALIVE NOTI	Some SIP Servers require SIP UA to send OPTIONS method simply for link test purpose. When set, system sends OPTIONS message to the SIP Server.	NONE
21	NOTIFY TIME	When ALIVE NOTI is set, NOTIFY TIME decides the message sending time interval.	1800 sec
23	IMS OPTION	When enabled, SIP headers that are commonly used in IMS environment will automatically be applied.	Disable
24	ASSERTED ID	If the value is set to PRIMARY, outbound message's FROM header will contain individual station number and P-Asserted-Identity header will contain primary number which is assigned by the SIP server. If the value is set to ALTERNATE, outbound message's P-Asserted-Identity header will contain individual station number and FROM header will contain primary number which is assigned by the SIP server.	NONE

(Continued)

No	Parameter	Description	Default
26	SIP PEERING	In general cases when making the call by interworking with the SIP server, the SIP Server IP is used in the From/To Header, however this is the option used when to use its own IP of the terminal in case of a specific SIP server.	DISABLE
27	CLIP TABLE	Refers to SEND CLI NUMBER (MMC 323), which provides calling party identification when using the MGI as a SIP gateway. This provides station ID of the calling station. A single-digit value corresponding to the desired table in MMC 323 should be entered here. This is only used when MMC 405 value is null.	1
28	SS TYPE	Indicates how SIP call flow will be done; 0. SERVER MANAGED 1. PBX MANAGED 1 2. PBX MANAGED 2	PBX MANAGED 2
29	302 RESP	This option is used for configuring external call forward method. During external call forward condition, if this option is set to Enable, system responds back to the SIP carrier with a 302 message which will allow the SIP carrier to handle the call forward. If this option is disabled, then the OfficeServ system will initiate a second invite message to the final forward destination. When OfficeServ handles the forwarding to the final destination, then more MGI resources will be used. If the SIP provider supports the 302 method, this option should be enabled.	Disable
31	DEST TYPE	This option selects the field that will be used to specify the final recipient destination. The field can be either the TO header or Request URI in the incoming INVITE message.	To-Header
33	CODEC NEGO	When disabled, the codec used will be the one selected in MMC 835 (MGI settings). When enabled, the codec used for the SIP call will be auto negotiated with the SIP carrier or remote SIP UA.	ENABLE
35	HOLD RE-INV	This option decides whether to use RE-INVITE message or not in case of HOLD and RESUME. When set to ENABLE, and pressed Hold button during an active SIP session, OfficeServ sends RE-INVITE message indicating it wants to put on hold. If set DISABLE, however, OfficeServ does not send any message. This option can be useful especially when interoperating with a SIP UA which does not understand or allow RE-INVITE message scheme.	ENABLE

No	Parameter	Description	Default
36	URI TYPE	This field specifies SIP-URI type in SIP messages. According to SIP standard, this system supports TEL-URI as well as SIP-URI, which is set by default.	-
37	SIG TYPE	This indicates the transport type in SIP message Signaling. SIP message can be transported either using UDP or TCP. (This option may not be available in certain OfficeServ models.)	-
39	PRACK	If this option is set to Enable, system supports PRACK.	DISABLE
40	HOLD MODE	This option selects Hold mode. (0. SENDONLY, 1. SENDRECV, 2. INACTIVE)	SENDONLY
41	RESP TO TAG	Set response to tag. (KEEP/CHANGE)	KEEP
42	CONN REUSE	Set connection reuse.	ENABLE
43	MUTUAL TLS	Set mutual TLS.	DISABLE
44	NO TLS AUTH	If it is set to Enable, TLS Authentication is not needed.	DISABLE
45	CODEC PR1	SIP trunk selectable codec 1	G.729
46	CODEC PR2	SIP trunk selectable codec 2	G.711a
47	CODEC PR3	SIP trunk selectable codec 3	G.711u
48	CODEC PR4	SIP trunk selectable codec 4	DISABLE
49	USE ALIAS	If this option is set to Enable, system sends Alias name of trunking call.	DISABLE
50	MAX CH NO	This option indicates SIP trunk max channel number.	224
51	OUT ORG CDC	If this option is set to Enable and there's an outgoing SIP trunk call, current call will follow opposite phone's codec.	DISABLE
52	INC FIX CDC	If this option is set to Enable and there's an incoming SIP trunk call, current call will follow codec of ISP DB.	DISABLE
53	ANONY. HOST	Anonymous Host Name	DISABLE

[839] SIP USER

This is the program to register to outbound SIP server on per user bases, using each pair of username and password.

In-site Information

No	Parameter	Description	Default
00	USERNAME	Alphanumeric username when registering to interacting Outbound SIP Server.	-
01	AUTH UID	This is the username which is used if the authentication is required from the SIP server. This is the item which is used for registering the individual number.	-
02	AUTH PWD	This is the password which is used if the authentication is required from the SIP server. This is the item which is used for registering the individual number.	-
03	TEL NO	This numbers are used to match alphabetical usernames to internal CLI and DDI numbers. (Matched to CLI for outgoing, and DDI for Incoming)	-

Out-site Information

No	Parameter	Description	Default
00	SITE URL	When dialed number is matched with TEL NO in this table, this value should be put into To-Header in outgoing INVITE message.	-
01	TEL NO	This numbers are used to match with dialed number. When matched, system considers the dialed number as a medium for converting from/to values to alphabetical values specified in SITE URL and CLI NAME in this table.	-
02	CLI NAME	When dialed number is matched with TEL NO in this table, this value should be put into From-Header in outgoing INVITE message.	-
03	ROUTING	When dialed number is matched with TEL NO in this table, this specifies the SIP CARRIER to which outbound message is transferring.	-

ENTERING USERNAME, AUTH UID, AUTH PWD

[840] IP PHONE INFORMATION

This MMC provides a means to register IP phones with the OfficeServ 7000 Series system. During registration, the IP and MAC addresses are also registered. The User ID and Password must match the table entry in this MMC for the IP phone to be registered. The system default phone numbers are 3201~3299 and default User IDs match the default station numbers. The system default password is 1234. IP phones must be individually programmed with a User ID and Password in order to register with the system.

No	Option	Description	Default
00	USER ID	This is the ID the IP phone must match to register with the OfficeServ 7000 Series system. (alphanumeric) To register IP phone in PnP mode (plug and play), the MAC address of IP phone has to be entered in USER ID option. And then IP phone has to do factory reset.	First 99 IP phones are 3201~3299, others are EMPTY.
01	USER PSWD	This is the password the IP phone must have to register with the OfficeServ 7000 Series system. (alphanumeric)	'1234'
02	IP ADDR	This is the IP address of the IP phone when registered with the system. (Read only)	0.0.0.0.
03	MAC ADDR	This is MAC address of the IP phone when registered with the system. (Read only)	FFFFFFFFFFFF
04	SIG PORT	This is the IP UDP port of the IP phone when registered with the system. (Read only) This information will be needed when traversing NAT routers, firewalls, etc.	6000
05	VOICE PORT	This is the IP RTP port of the IP phone when registered with the system. (Read only) This information will be needed when traversing NAT routers, firewalls, etc.	9000
07	DSP TYPE	This selects which CODEC this phone's DSP will use. G.729A (low bandwidth) or G.711 (high bandwidth). This data uses IP phone to IP phone connection only; others follow MGI CODEC type.	G.729A
08	PHONE TYPE	This is the type of IP phone used, SAMSUNG or SIP (future). Use SAMSUNG.	SAMSUNG
09	REGIST CLR	This is used to clear the registration of a particular IP phone. This is similar to unplugging and plugging in the phone and is useful for maintenance.	NO
10	FRAME COUNT	This value determines the transmission interval time of VoIP packets generated by the IP phone. This data uses MMC 841 ITP DSP PARA DOWN = PHONE DATA only. The range is 10~40 ms.	20 ms

(Continued)

No	Option	Description	Default
11	JITTER BUF	Decides the minimum time to consider delay for jitter adjustment. This data uses MMC 841 ITP DSP PARA DOWN = PHONE DATA only. The range is 10~90 ms.	20 m
12	TOS/Diffsrv	An 8-bit binary value that will be used by external routers, switches, etc, (that optionally support TOS-bit prioritization) to identify the transport-priority value of data packets generated by the IP phone. This value can be left at the default value (00000) if your network infrastructure does not support this method of bandwidth management. This data uses MMC 841 ITP DSP PARA DOWN = PHONE DATA only.	All bits 0
13	S/W VERSION	Display IP phone software version. (Read only)	-
14	S/W UPGRADE	This is used as IP phone software upgrade request command. When YES is selected and Right Soft button is pressed, the system requests IP phone software upgrade with TFTP IP address.	-
15	TIME ZONE	Allows remote IP phones to display own time zone.	00.00
17	SIG TYPE	This option can change UDP/TCP signal type for IP phone. (ITP V3.xx only supports the TCP signal type. If TCP is set and ITP V2.xx attempts to connect, the TCP signal type will change from TCP to UDP automatically.)	UDP
18	PRIVATE IP	Displays private IP address of remote IP phone allocated by phone's router.	0.0.0.0
19	VIDEO DSP	Designate the standard video compression format of the VIDEO IP phone. (H.263/MPEG4)	H.263
20	VIDEO SIZE	Designate the video input/output format of the codec of the VIDEO IP phone. (CIF, QCIF)	CIF
29	QoS ENABLE	Designate whether to use the QoS. (This option may not be available in certain OfficeServ models.)	DISABLE
30	FRC LOGOUT	This is used to logout the registration of a particular IP phone. IP phone should support IDLE MODE function and be login status. This is useful for maintenance.	NO
32	USE sRTP	Disable: Do not use sRTP, Enable: Use sRTP	DISABLE
33	MCAST PAGE	Multicast Page (AUTO/ON/OFF)	AUTO

20	DHCP SERVER	OfficeServ provides Embedded DHCP server for an easy connection when using PNP mode. All systems except MP40 and MP20 provide embedded DHCP server. Change this option to ENABLE to use embedded DHCP server. In this case you don't have to set an additional DHCP options but just set DHCP server use and start/end IP address. ☐ When using MP40 and MP20, user should set external DHCP options to use PNP mode. Following two DHCP server options should be checked. - TFTP_Server_Name (66): 'SEC_ITP' (66 is DHCP option number) This option is used to distinguish our DHCP server from the other one under the circumstance one more DHCP servers are running. - TFTP_Server_IP (128): OfficeServ IP address (128 is DHCP option number) Using this IP address, IP phone tries to register to OfficeServ. (This option is not available in VxWorks system; OfficeServ 7400 and 7200.)				DISABLE
21	DHCP POOL START	This option is for DHCP start IP address. (This option is not available in VxWorks system; OfficeServ 7400 and 7200.)				0.0.0.0
22	DHCP POOL END	This option is for DHCP end IP address. (This option is not available in VxWorks system; OfficeServ 7400 and 7200.)				0.0.0.0

No	Option	Description	Default
23	SELECT PNP MODE	OfficeServ provides 3 types of PNP Mode. - PRE-MACADDR: IP phone can register to the system after entering its MAC address as User ID in MMC840. - AUTO PNP: System searches free user id and password and returns these values to the IP phone. Phone will connect automatically without any setting. If phone completes to register, User ID of phone is changed to phone's MAC address automatically. - NORMAL LOGIN: If IP phone tries to register to the system by PNP mode, system returns specific message to change phone's display. Then user enters User ID and Password which was received from system manager previously.	AUTO PNP
24	NTP SERVER URL	This option is for NTP server. Set IP address or Domain Name. If system is plugged into the network then it will update itself by polling the NTS.	NONE

RELATED ITEMS

MMC 840   IP PHONE INFORMATION

[842] SIP STATION INFORMATION

This MMC provides a means of registering the SIP with the OfficeServ 7000 series system.

No.	Parameter	Description
00	REGISTERED	This indicates whether the corresponding standard SIP terminal is registered.
01	IP ADDRESS	IP address of IP phone
03	USER ID	When phone is registered, user ID for checking user
04	PASSWORD	When phone is registered, user password for checking user
06	TONE SRC	Designate whether to use the holding tone of the system or to use the holding tone of the SIP terminal when connecting the call via the SIP terminal. 0. USE SYSTEM TONE = Use the tone of the system for the holding tone and for the ring back tone in some ring back status (CALLBACK, etc.). When using the tone of the system, in case of the calls which do not use the MGI such as the call between the SIP terminals or the call with the IP phone, the holding tone (ring back tone) is emitted by allocating the MGI. 1. USE SIPP TONE = Use the own tone of the SIP terminal.
07	CALL WAIT	This indicates whether to receive the second call without treating it as the busy status when the second call is received in the SIP terminal. (DISABLE/ENABLE)
08	PHONE TYPE	This indicates the manufacturer of the standard SIP terminal. In case of the terminals other than the Samsung standard SIP terminals, registration is limited to the number allocated according to the LICENSE KEY entered in the MMC860. (DISCONNECTED/SAMSUNG PHONE/OTHER SIP PHONE)
09	PUB IPADDR	These values indicate the IP address and port number of terminals or access pointers sending REGISTER messages. The 'PUB IPADDR' value can be different from the 'IP ADDRESS'.
10	PUB PORT	
11	SIG PORT	This indicates the port and transport protocol that is used for signaling by SIP terminals. If signaling port is stored at DB, the SIP phone can transmit and receive signal although the system restart.
12	PROTOCOL	
13	DTMF TYPE	This indicates DTMF type of each SIP phone. (DISABLE/RFC2833/OUTBAND(INFO))
14	UNREGI FWD	This indicates unregistered forward destination. When mobile client is disconnected normally or does not respond to INVITE message within unregistered forward time, incoming call for mobile client is transferred to unregistered forward destination.

[843] MPS OPTIONS

This MMC provides network configuration of MPS (Media Proxy Server) in the system. This option can be shown in some OfficeServ system.

No	Parameter	Description
0	LOCATION	Located Cabinet and slot number of MPS.
1	IP ADDRESS	Specifies the IP address for the MPS.
2	GATEWAY	Specifies the designated IP gateway address used for contacting IP devices beyond the local subnet.
3	SUB MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices (subnet) that are within 'direct reach' of the MPS. (without having to go through the designated network IP gateway)
4	IP TYPE	Specifies whether a system is in a private or public network.
5	LOCAL RTP	Local RTP Port
6	CARD RESET	Reboots MPS (This option may not be available in certain OfficeServ models.)
7	PUBLIC IP1	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830
8	PUBLIC RTP1	Public RTP Port which NAT system binds a private RTP port with
9	PUBLIC IP2	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830
10	PUBLIC RTP2	Public RTP Port which NAT system binds a private RTP port with
11	PUBLIC IP3	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830
12	PUBLIC RTP3	Public RTP Port which NAT system binds a private RTP port with
13	IP VERSION	Specifies MPS IP version is IPv4/IPv6. (This option may not be available in certain OfficeServ models.)
17	RTG LOCAL	Local RTG Port
18	RTG PUB 1	Public RTP Port which NAT system binds a private RTG RTP port with
19	RTG PUB 2	Public RTP Port which NAT system binds a private RTG RTP port with
20	RTG PUB 3	Public RTP Port which NAT system binds a private RTG RTP port with
21	FRAME CNT	RTG Frame Count (20/40/60MS)

> **NOTE**
> If MP-MPS (the embedded MPS) is selected, parameters such as IP ADDRESS, GATEWAY, SUB MASK, CARD RESET can not be set in this MMC because these parameters and the system values are the same. The system values can be referred in MMC 830.

CONDITIONS

This MMC cannot be accessed unless MMC861 MPS SERVICE is enable.

[845] WLAN PARAMETERS

This MMC modifies the WLAN parameters.

WLAN PARAMETER

No	Parameter	Description	Default
05	CODEC LIST	CODEC that can be used for VoIP calls between WBS24 and terminal. G.711u, G.711a, G.726, and G.729 can all be assigned.	CODEC 1: G.729 CODEC 2: NONE CODEC 3: NONE CODEC 4: NONE
06	RF CHANNEL	Set a RF CHANNEL value that can be used by WBS.	USE CH 1: 01 USE CH 2: 06 USE CH 3: 11 USE CH 4: 00 USE CH 5: 00 USE CH 6: 00
07	VERSION	WLAN module version.	Version
20	MAX AP CH.	Set the maximum channel number of AP If AP type is Commercial AP, this option can be shown.	00
21	WLAN SWTCH	Support WLAN switch function In case that AP type is not WBS COMBO, this option can be shown	DISABLE

SIP PARAMETER

No	Parameter	Description	Default (ms)
0	RE-TRANS T1	When using an unreliable transmission protocol such as UDP, retransmission is required when no reply is received. RE-TRANS.T1 TIME is the initial retransmission interval defined in RFC2543.	500
1	RE-TRANS T2	Maximum retransmission interval defined in RFC 2543	4000
2	RE-TRANS T4	RFC 2543 defines this parameter for various purposes. For example, this parameter can be used as the time waited by User Agent Server after receiving ACK message in an unreliable transmission protocol.	5000
3	GEN RING TM	When using an unreliable transmission protocol, the server cannot be sure if the client has received the last reply. Thus, the server must retransmit the reply for this length of time until it receives the requested retransmission. For example, this parameter can be used as the waiting time after sending 200 OK for INFO.	6000

(Continued)

No	Parameter	Description	Default (ms)
4	INV RING TM	When using an unreliable transmission protocol, the client cannot verify if the server has received the ACK returned to the server for the INVITE Final Response. The client waits for this length of time after sending the ACK for the Final Response.	1000
5	GEN NO RESP	Waiting time before sending SIP related Request.	5000
6	INV NO RESP	Waiting time before sending SIP INVITE Request.	6000
7	REQ RETRY	Waiting time for receiving final response for SIP related Request.	5000
8	PROVISIONAL	On receiving Provision Response, the User Agent must wait for this length of time until Timeout.	180000

ACTION

DISPLAY

1) Press Transfer button and enter 845.

```
WLAN: CODEC LIST
G.729
```

2) When the cursor is on WLAN, press Volume button and select WLAN, WBS, or SIP.

```
WLAN: CODEC LIST
G.729
```

3) Press Right Soft button to move to the SYSTEM ID. When the cursor is below SYSTEM ID, press Volume button to select the setting menu for WLAN.

```
WLAN: CODEC LIST
G.729
```

4) Set the items below at the WLAN menu.

SYSTEM ID: Use the Soft button to move the cursor and enter the new WLAN SYSTEM ID to register. Press Soft button and proceed to next register status.

```
WLAN: CODEC LIST
G.729
```

Register the SYSTEM KEY.

```
WLAN: SYSTEM KEY
00000
```

Register the 1st DNS server IP.

```
WLAN: 1ST DNS IP
0. 0. 0. 0
```

Register the 2nd DNS server IP.

```
WLAN: 2ND DNS IP
0. 0. 0. 0
```

Register the 2nd WBS IP.

```
WLAN: 2ND WBS IP
0. 0. 0. 0
```

Select the voice codec. Select from G711a, G711u, and G729 CODEC.
Numbers are given from 1 to 4 based on priority.

```
WLAN: CODEC LIST
CODEC 1: G.711a
```

Select the usable RF channel. Maximum six channels can be used for a system.
(Default RF channel: 1, 6, 11)

```
WLAN: RF CHANNEL
USE CH 1: 01
```

Used to change the TX POWER of all WBS.
(Default: LEVEL 1~4)

```
WLAN: WBS TX PWR
DEFAULT
```

Used to clear registration information of all WBS.

```
WLAN: CLR WBSREG
ARE YOU SURE?NO
```

5) Set the items below at the WBS24 menu.
    The selected WBS is as set in MMC 849 (SELECT AP TYPE option) i.e. CWBS = COMBO WBS, BWBS = BASIC WBS.
    Register the WBS24 IP ADDRESS.

```
CWBS1: IP ADDR
0. 0. 0. 0
```

Register the WBS24 NET MASK.

```
CWBS1: NET MASK
255.255.255. 0
```

Register the WBS24 GATEWAY.

```
CWBS1: GATEWAY
0. 0. 0. 0
```

Displays the WBS24 MAC ADDRESS.

```
CWBS1 : MAC ADDR
FFFF FFFF FFFF
```

Displays the WBS24 VERSION.

```
CWBS1 : VERSION
```

Displays the WBS24 STATUS.

```
CWBS1 : STATUS
OFF
```

Register the WBS24 RF CHANNEL. (The WBS RF channel must be selected from the pre-assigned RF channels in WLAN RF CHANNELS).

```
CWBS1 : RF CHAN
USE CH 1:01
```

Register the WBS24 TX POWER.
(Default: LEVEL 1~4)

```
CWBS1 : TX POWER
DEFAULT
```

Used to clear the WBS parameter.

```
CWBS1 : PARA CLR
ARE YOU SURE?NO
```

6) Set the items below at the menu.
Register the RE-TRANS T1.
The initial re-transmission time if no answer, based on the RFC2543 specification.
The range is 0-9900 ms. (Default: 500 ms)

```
SIP : RE-TRANS T1
000500MS
```

Register the RE-TRANS T2.
The maximum re-transmission time if no answer, based on the RFC2543 specification.
The range is 0-9900 ms. (Default: 4000 ms)

```
SIP : RE-TRANS T2
004000MS
```

Register the RE-TRANS T4. The time the User Agent Server waits after receiving the ACK message.
Based on the RFC2543 specification.
The range is 0-9900 ms. (Default: 5000 ms)

```
SIP : RE-TRANS T4
005000MS
```

Register the GEN RING TM. The server retransmits the response for this length of time until the requested retransmission is received. For example, the wait time after sending 200 OK for INFO.
The range is 0-99900 ms. (Default: 6000 ms)

```
SIP : GEN RING TM
006000MS
```

Register the INV RING TM. After the client sends ACK for the INVITE Final Response, the client can not confirm if the server received the ACK message. The client waits this long after sending ACK for the Final Response.
The range is 0-99900 ms. (Default: 1000 ms)

```
SIP : INV RING TM
001000MS
```

Register the GEN NO RESP. Before sending Cancel for General Request, the User Agent waits this long.
The range is 0-99900 ms. (Default: 5000 ms)

```
SIP : GEN NO RESP
005000MS
```

Register the INV NO RESP. Before sending Cancel for the Invite Request, the User Agent waits this long.
The range is 0-99900 ms. (Default: 5000 ms)

```
SIP : INV NO RESP
006000MS
```

Register the REQ RETRY. After sending General Request, he User Agent waits for the Final Response for this length of time.
The range is 0-99900 ms Default is 5000 ms

```
SIP : REQ RETRY
005000MS
```

Register the PROVISIONAL. After receiving the Provision Response, the User Agent waits this long until Timeout ends.
The range is 0-999900 ms. (Default: 180000 ms)

```
SIP : PROVISIONAL
180000MS
```

RELATED ITEMS

MMC 846	WIP INFORMATION

MMC 848	WLAN IP/MAC LIST
MMC 849	WLAN CONFIGURATION

[846] WIP INFORMATION

This MMC sets up the WiFi phone information.

No	Parameter	Description	Default
00	REGISTERED	Shows if the terminal is registered.	NO
01	LOCATED	Shows if the terminal is connected to the system. If attached, wip phone's mode is also displayed (sip mode or ospp mode)	DETACH
02	PHONE TYPE	Shows the type of the terminal.	NONE
03	WLI NUMBER	Shows WLI Number. If AP type is WBS COMBO, this option can be shown. (This option may not be available in certain OfficeServ models.)	-
04	WBS NUMBER	Shows WBS Number. If AP type is not Commercial AP, this option can be shown.	-
05	IP OFFSET	Location of IP pool of the terminal IP If AP type is not Commercial AP, this option can be shown.	-
06	IP ADDRESS	Terminal IP address	0.0.0.0
07	MAC ADDR	Terminal MAC address	0000 0000 0000
08	USER ID	User ID per terminal	PHONE NUM
09	PASSWORD	Password of terminal user	0000
10	INSERT DGT	If five or more numbers are entered into the WIP terminal, this INSERT DGT is prefixed to the numbers, provided the entered numbers do not start with a C.O. number, C.O. group number, LCR, network LCR, or function code.	-
12	HO THRSH	Handover Thresh Hold Value (-99~0) Thresh Hold is a signal level which makes WLAN phone start scanning for handover. If this signal level is under the registered Thresh Hold, WLAN phone will start scanning. This parameter has a minus value but system only displays the value without minus. (So the default value of Thresh Hold will be shown as 70 not -70.)	70
13	HO DELTA	Handover Delta Value (0~99) DELTA means the signal level difference between AP which includes WLAN phone and another AP. If this signal level difference is over the registered DELTA, WLAN phone will start to handover. In this case the signal level of WLAN phone should be under the Thresh Hold.	05
14	HO SCAN	Handover Scan Time Value (0~99) SCAN Time is a period of scanning for WLAN Handover. If the signal level of WLAN phone is under the Thresh Hold, WLAN phone will start scanning with the registered period (= SCAN Time).	01

No	Parameter	Description	Default
15	SW VERSION	Display WIP phone software version. (Read only)	DISCONNECT
16	SW UPGRADE	This is used as WIP phone software upgrade request command. When YES is selected and Right Soft button is pressed, the system requests WIP phone software upgrade with TFTP IP address.	DISCONNECT
17	USE sRTP	Disable: Do not use sRTP, Enable: Use sRTP	DISABLE

[851] ALARM REPORTING

This MMC is used to view, store, print or clear system alarms. Two levels of faults are displayed via an alarm code: major alarms and minor alarms. Major alarms codes are usually service affecting and require a certified technician to determine the fault.
A minor alarm indicates a fault that may or may not be service affecting and usually does not seriously degrade the system's operating capabilities.

The alarm buffer holds up to 100 alarms on a First In-First Out (FIFO) basis. Alarms provide a date and time stamp based on the system time. If applicable, the hardware cabinet, port, and/or slot will be displayed. If an ALARM SIO port is programmed (MMC 804), alarm information can be printed on demand and as it is provided.

ALARM REPORTING OPTIONS (Select one of the options)

No	Option	Description
0	VIEW ALARMS	View alarm buffer.
1	OVERFLOW CONTROL	Determines buffer control when buffer is full. 0) OVERWRITTEN: When buffer is full, the oldest entry in buffer is overwritten. (Default.) 1) STOP RECORDING: When buffer is full, stop recording alarms.
2	CLEAR ALARM BUF	Clears alarm buffer.
3	PRINT ALARM BUF	Prints contents of alarm buffer to the assigned alarm IO port.
4	VIEW STATUS	View NMS status

RELATED ITEMS

MMC 852   SYSTEM ALARM ASSIGNMENTS

[852] SYSTEM ALARM ASSIGNMENTS

This MMC allows the assignment of system alarms to ring and display on stations that have an Alarm key assigned. The Alarm key is assigned in MMC 722 (Station Key Programming). Alarm key programming is tenant wide (tenants 1 and 2). Alarms not programmed to report to the system Alarm key will still be retained in the maintenance alarm buffer for Alarm Reporting (MMC 851). The alarm buffer holds up to 100 alarms on a First In-First Out (FIFO) basis. Pressing the Alarm key will silence the audible alarm until another alarm is generated by the system. Alarm conditions that have multiple causes (e.g. PRI errors and synchronization loss) will print all associated alarm information if an SIO port is programmed as an ALARM port. The specific fault alarm data can be displayed via MMC 851, System Alarm Reporting.

NOTE

Alarm Notification

Alarm Notification Off/On (0/1) determines if the alarm provides a visual and audible notification to the System Alarm key station(s). Pressing the System Alarm key and the release key will silence the audible alarm only at the station that pressed the System Alarm key and the release key. See alarm displays table for assignments.

Alarm Code Definitions:

No	Code	Alarm Name	Definition
-	MJA--	MCP2 Error	System Fault
01	MJA01	Power On Restart	MP card restart process has been executed via power on restart. (POR)
02	MJA02	Button Restart	MP card restart process has been executed via button reset.
03	MJA03	MMC Reset	The system RAM has been cleared via manual programming (PCMMC or KMMC) resulting in a system reset.
04	MJA04	MCP Reset	The MP card has software exception error. Alarm data = Reason - BUS ERR: Restart Bus Error - ADDR.ERR: Restart Address Error - ILLEGAL: Restart Illegal OPcode - ZERO DIVID: Restart Zero Divide - PRIVILEGE: Restart Privilege Violation - ENDL LOOP: Restart Endless Loop
05	MJA05	LCP Restart	The LP card has reset Alarm data = Cabinet (1, 2 or 3)
06	MJA06	PCM Switching	A fault has occurred in the Switching Control Alarm data = MCP BASE, ESM: 1, ESM: 2 or ESM: 3

No	Code	Alarm Name	Definition
08	MJA08	FAN Out of Order	A FAN does not work.
09	MJA09	FAN Recovery	A FAN which did not work starts to operate correctly before system stops.
10	MJA10	CPU Overload	CPU Overload
11	MJA11	CPU Overload Rec	CPU Overload Recovery
12	MJA12	FLASH FORMAT Err	FLASH FORMAT Err
13	MJA13	Invalid MMC Halt	An Invalid MMC card has inserted in SYSTEM. So system is halted.
14	MJA14	DUAL PWR Error	Dual Power Error alarm
15	MJA15	DUAL PWR Recovery	Dual Power recovery alarm
16	MJA16	D-PWR FAN Error	Dual Power FAN Error alarm
17	MJA17	D-PWR FAN Recovery	Dual Power FAN recovery alarm
18	MJA18	PoE PWR Error	PoE Power Error alarm
19	MJA19	PoE PWR Recovery	PoE Power recovery alarm

26	MJA26	MEDIA NOT UMOUNT	Media Card Out without Unmounted
27	MJA27	SYS Overheat	System Overheat alarm
28	MJA28	SYS High Temp	System High Temperature alarm
29	MJA29	SYS Normal Temp	System Normal Temperature alarm
30	MJA30	PCM SW Init Fail	PCM switch initial fail alarm
31	MJA31	PCM SW Init Rec	PCM switch initial recovered alarm
32	MJA32	LPBOOT Erase Err	LP40 Boot Upgrade fail alarm-Erase error
33	MJA33	LPBOOT Check Err	LP40 Boot Upgrade fail alarm-File Check error
34	MJA34	LPBOOT Write Err	LP40 Boot Upgrade fail alarm-Write error
35	MJA35	SLI TEMP Over	SLI Temperature Over alarm
36	MJA36	SLI TEMP Recover	SLI Temperature Recovery alarm
37	MJA37	911 Emergency	911 Emergency alarm
-	MJB--	LCP/TASK Error	LCP or TASK Fault
38	MJB01	HDLC Comm Error	Communications to LCP lost or faulty.
39	MJB02	Memory Alarm 1	A RAM diagnostic check error has occurred in the MP card.

No	Code	Alarm Name	Definition
43	MJB06	IPC MSGQ Over	IPC TX queue full error has occurred in the MP card. Alarm data = IPC Queue type
44	MJB07	IPC MSGQ Under	IPC TX queue full recovery has occurred in the MP card. Alarm data = IPC Queue type
-	MJC--	DSP Error	System Resource Fault
47	MJC01	DTMF Fault	An abnormal interrupt has occurred in the system DTMF resources. Alarm data = DTMF Receiver DSP position
48	MJC02	Tone Fault	An abnormal interrupt has occurred in the system tone resources. Alarm data = TONE Receiver DSP position.
49	MJC03	CID DSP Fault	CID DSP Fault
52	MJC06	AC Pwr Loss	AC Power Loss
53	MJC07	AC Pwr Recovery	AC Power Recovery
54	MJC08	Low Battery	Low Battery
55	MJC09	Low Battery Rec	Low Battery Recovery
62	MJC16	WLI Restart	WLI Restart alarm
63	MJC17	WLI Block	WLI Block alarm
64	MJC18	D-BD Init Fault	D-board Initial Fault
65	MJC19	D-BD Init Rec	D-board Initial Recovery
66	MJC20	Card Init Fault	Card Initial Fault
67	MJC21	Card Init Rec	Card Initial Recovery
-	MJD--	DTRK Error	ISDN or E1 card Fault
68	MJD01	Sync Failure	Clocking on TEPRI cards has become asynchronous.
69	MJD02	Sync Recovery	Clocking on TEPRI cards has become synchronous.
70	MJD03	Red Alarm	Locally detected loss of PCM carrier on TEPRI card for more than 250 ms. Alarm Data = Cabinet, Slot (Cx-Syy)
71	MJD04	Red Alarm Rec	PCM carrier detected locally on TEPRI cards. Alarm Data = Cabinet, Slot (Cx-Syy)
72	MJD05	Yellow Alarm	Remotely detected failure transmitted in frame on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)
73	MJD06	Yellow Alarm Rec	Remotely detected failure restored transmitted on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)
74	MJD07	Blue Alarm	All 1's being transmitted on facility on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)

(Continued)

No	Code	Alarm Name	Definition
75	MJD08	Blue Alarm Rec	A blue alarm condition has been cleared. Alarm Data = Cabinet, Slot (Cx-Syy)
76	MJD09	Bit Error Alarm	Alarm is activated when the error rate exceeds 1 x 10-6 errors. Note: 1x10-6 is threshold for minor alarm, 1 x 10-3 is threshold for major alarm errors on E1, PRI or BRI. Alarm Data = Cabinet, Slot (Cx-Syy)
78	MJD11	SPID Init Error	The BRI received an error from the network. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
79	MJD12	SPID Init Rec	The BRI has recovered from an error on the network Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
80	MJD13	LPBK Error	Internal on demand loopback failed. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
81	MJD14	LPBK Recovery	Internal on demand loopback test passed. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
82	MJD15	BRI DL Unavail	A BRI data link is out of service. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
83	MJD16	BRI DL Recovery	A BRI data link is back in service. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
-	MJD--	DTRK Error	ISDN or E1 card Fault
85	MJD18	E1 Restart	The E1 card has restarted. Alarm Data = Cabinet, Slot (Cx-Syy)
86	MJD19	PRI Restart	The PRI card has restarted. Alarm Data = Cabinet, Slot (Cx-Syy)
87	MJD20	BRI Restart	The BRI card has restarted. Alarm Data = Cabinet, Slot (Cx-Syy)
88	MJD21	PCM Loss	Loss of PCM coding on a digital facility. Alarm Data = Cabinet, Slot (Cx-Syy)

MMC 853	MAINTENANCE BUSY

[853] MAINTENANCE BUSY

This MMC is used to place stations, trunks and common resources equipment in a maintenance busy condition. This can be used to isolate suspected intermittent problems. Stations placed in maintenance busy will behave like a station in DND when called. The calling stations display will show 'MADE BUSY'. Stations receiving DID or E & M type calls will receive a DND/ No more calls tone. The station display will still function with station and date.

When the busy station is accessed, it will function like a 'locked all' station. Trunks made busy cannot originate calls. Ring down type trunks will still ring the programmed destination. Common resource equipment such as DSPs, CID DSPs and miscellaneous equipment such as page ports and voice mail card ports can also be placed in a maintenance busy state.

MAINTENANCE BUSY OPTIONS

No	Option	Description
0	TRK	Trunks
1	STN	Stations
2	PAGE	Page Ports
3	AA	Auto Answer (This option may not be available in certain OfficeServ models.)
4	DTMFR	DTMF Receiver
5	CID	CID Receiver
6	R2MFC	R2MFC Receiver OfficeServ 7100 does not support R2MFC
7	CONF	GRP #01-24
8	MGI	MGI Ports
9	MOBEX	MOBEX Ports (This option may not be available in certain OfficeServ models.)

DTMFR/CID/R2MFC DSP

If DTMFR, CID or R2MFC is selected when DSP is not mounted, display will show NONE. If mounted, display will show IDLE by default.

NOTE

DEFAULT DATA

ALL IDLE

ACTION

1) Press Transfer button and enter 853.
   Display shows busy functions:

2) Enter busy function type (0-8) via dial keypad.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

3) Enter station number.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

4) Press 1 to make busy or 0 to make idle.
   OR
   Press Volume button to make selection and press
   Right Soft button to save and return step 3.

5) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

[854] DIAGNOSTIC TIME

Provides a means to set the Diagnostic Time. The system diagnostics tests include memory audits, internal loopback tests on digital trunks, and DSP, AA DSP tests. Additional tests include CODEC tests on analogue trunk and station cards and tone tests. If the diagnostics cannot complete the tests because of system traffic, the system will abort the tests and retry during the next programmed diagnostic time. It is recommended to assign the diagnostic time during non-peak traffic periods.

DEFAULT DATA

NO DIAGNOSTIC TIME SET

ACTION

1) Press Transfer button and enter 854.
   Display shows:

2) Enter weekday number.
   (0: Sun, 1: Mon, ..., 6: Sat)
   OR
   Press Volume button to make selection and press

[856] TECH PROGRAMMING LOGS

This MMC lists the date, time and entry location of the last eight times that technician-level programming was accessed. This allows a technician to determine if there was unauthorized access to system programming and where this access occurred.
The information stored in this log is displayed, for each of the eight accesses, as follows: first line shows the start date and time of access; second line shows the access type (see table) and end date and time of access.

There are four access types:

Type	Description
NNNN	The extension number of a phone that accessed programming directly (e.g. 3203)
MODEM	Programming was accessed by PCMMC via the integrated V90 modem attached to the IOM board of the main cabinet.
LAN	Programming was accessed by PCMMC via the LAN connection on the MCP2 card of main cabinet.
SIOx	Programming was accessed by PCMMC via one of the SIO connections on the IOM board of the main cabinet, where x is the number (2 or 3) of the SIO port that was used.

[860] LICENSE

This MMC is used for setting all types of licenses. Please note that license scheme has been changed from v4.30. In earlier versions, OfficeServ had a single license scheme: all service licenses were contained in a single license key. However, in v4.30 each different service has each different license key as following.

No.	Parameter	Description
00	PBX LICENSE (OLD)	This is for backwards compatible with earlier version than V4.30. If having license in previous version, the license should be inserted in this parameter.
01	PBX LICENSE STS	This is for backwards compatible with earlier version than V4.30. If inserted license is valid, license details are shown.
02	PBX LICENSE STACK	This is for backwards compatible with earlier version than V4.30. Designate the SIP Stack within the number allowed in the license.
03	SIP LICENSE	Insert license for sip stack.
04	SIP LICENSE STS	If inserted license is valid, license details are shown. Display assigned information of sip stack for SIP Trunk, SIP Station including 3rd party, SIP application (e.g. IP-UMS/IVR), FMC SIP station, MVS SIP station.
05	RESOURCE LICENSE	Insert the license for MGI, VMS. This option is not shown in case of MP40 and MP20 before V4.60 but in V4.60 this license is always shown regardless of system type because SVMi-20i needs resource license for VMS and FAX. Be sure that resource license for SVMi-20i can be issued with system mac address not SVMi-20i mac address.
06	RESOURCE LIC STS	If inserted license is valid, license details are shown.
07	SERVICE LICENSE	Insert license for H323, Soft phone, MGS (MOBEX), IP Phone, WIFI Phone, Call Manager, SPNET used and CNF24.
08	SERVICE LIC STS	If inserted license is valid, license details are shown.
11	TEMP LICENSE	This can have 3 values. - DISABLE - URGENT ENABLE: If a license key with an old MAC address is entered, even if the MAC addresses differ, the old license shall be able to be used for two weeks. If a normal license is entered while an urgent license is being operated, it shall be disabled automatically. The urgent license shall be used just one time on the same H/W.

(Continued)

No.	Parameter	Description
11	TEMP LICENSE	- TUTORIAL ENABLE: A license function for tutorial shall be added. It shall be operated only when there is no normal license key. But if normal license is inserted, tutorial license is changed to disable and the normal license is used automatically. After being enabled, it can be used for 30 days. When the tutorial license is enabled, each resource has max value which is different by system type. [MAX] VM channels [MAX] MGI channels [MAX] AA channels [MAX] FAX channels [MAX] MOBEX Executive users [MAX] Soft phones [MAX] H.323 trunks [MAX] SIP trunks [MAX] Samsung SIP phones [MAX] 3rd-Party SIP phones [MAX] Samsung SIP applications [MAX] FMC SIP phones [MAX] MVS SIP phones [MAX] IP Phones [MAX] WiFi Phones [MAX] Call Managers [MAX] CNF24 channels SPNET enable

[861] SYSTEM OPTIONS

Sets a number of system options.

No	Option	Description
00	AUTO UPDATE TIME	Sets enable (1) or disable (0) the system automatically time and date update from ISDN call connection message. If sets enable, when system receives ISDN call connection message, system checks valid data of encapsulated time and date, and update system time and date device.
01	SYSTEM SPPED BIN	Sets max 500 (0) or max 950 (1) for the maximum number of system speed dial bin.
02	IDLE WHEN ENBLOC	Decides the state of Large LCD Phone treated as idle or busy when the user of Large LCD Phone is dialing in ENBLOCK mode.
03	2 LINE ENBLOCK	Decides the usage of ENBLOCK mode for 2 line LCD Phone with navigation buttons.
04	2 ZONE EXT PAGE	Decides whether 2 Zone external paging is enabled or not. (This option may not be available in certain OfficeServ models.)
05	USE LB FOR PAGE	Decides whether LB port of MISC card is used as ROP port or not. (This option may not be available in certain OfficeServ models.).
06	LP TRK TONE DISC	When this option is set to ON, loop trunk can be disconnected by detecting busy tone.
09	SPNET OVERLAP	Designate whether to operate as the OVERLAP Mode in case of SPNET Dialing.
10	SPNET CLI TABLE	This is the option to display the designated CLI number instead of the (NODE + extension number) in the CLIP table of the MMC323 when the network call is received in the KB net.
13	E-LCR CLI TABLE	This is the option to comply with the clip table in case of the E-LCR Call.
14	EXTERNAL BGM/MOH	Background music source can be use internal source or external source, In case of external source, music source can be supported in MISC port. (This option may not be available in certain OfficeServ models.)
15	AP RUSSIAN CODE	This option is only available if Country is RUSSIA. When application is used (Installation Tool or OSM), the below codes can be selected. 0: ISO 8859-5 1: KOI8-U/R 2: WIN-1251

(Continued)

No	Option	Description		
16	LCP CABINET TYPE	The OfficeServ 7200 can also use the OfficeServ 7100 as a expansion cabinet. This option can be shown in the OfficeServ 7200. 0: OS7200 CABINET 1: OS7100 CABINET		
17	MAX CHAIN FWDALL	If ALL CALL FORWARD or BUSY FORWARD is set, it is possible to designate how many hops can be supported.		
18	PINGRING SERVICE	This is the option to support PING RING SERVICE. The PING RING SERVICE means that the stations which are same pickup group can display the information of a call and ring after designated time just one time.		
21	ISDN PROG IND	If this option is set, a call can be cleared by ISDN Progress Indicator message		
22	ISDN SS SERVICE	Decides whether ISDN SS (Supplement Service) is used or not. This can be set per card type (BRI/PRI). ISDN SS Feature is always enabled in OfficeServ 7100 and if Country is KOREA or USA, this option is not available.		
23	MOBEX EXEC OPTN (This option may not be available in certain countries.)	AUTH BY CLI	When this option is set to ON, If incoming MOBEX call has registered CLI, the call is authenticated without authorization process. ON/OFF	
		AUTH TONE	When this option is set to ON, user can select tone, which is played for incoming MOBEX call during authorization process. ON/OFF	
		TONE SOURCE	Select between TONE and 371 for Authorization tone. TONE/371	
		BLF BY CLI	If incoming MOBEX call has registered CLI, BLF service is set to the paired extension. ON/OFF	
		ANSWER TIME	This is waiting time before MOBEX call is connected. 00~30 sec	

No	Option		Description
24	TRUNK → MOBEX CLIP (This option may not be available in certain countries.)	TO ISDN	This option selects which CLI has to be sent to MOBEX station. And this option can be applied when the external user makes a call to MOBEX station using ISDN trunk. - RECEIVED: send incoming CLI - MASTER: send MASTER CLI of MMC 323 - MOBEX: send MOBEX CLI of MMC 323
		TO SIP	This option selects which CLI has to be sent to MOBEX station. And this option can be applied when the external user makes a call to MOBEX station using SIP trunk. - RECEIVED: send incoming CLI - MASTER: send MASTER CLI of MMC 323 - MOBEX: send MOBEX CLI of MMC 323
25	VOIP RTP OPTION	DTMF	There are three types of DTMF transmission: IN VOICE-DTMF tone is included in RTP stream, RFC2833- RFC2833 RTP Event is included in RTP Stream, OUTBAND-DTMF data is transferred on the VoIP signaling.
		MPS SERVICE	Enable or Disable Media Proxy Server. MPS forwards RTP streams and supports NAT traversal which redirect a RTP stream when remote ITP/SIP phone is in NAT/firewall environments (This option may not be available in certain OfficeServ models.).
		NO MPS → MGI	The option indicates whether a system will used MGI resource or not when MPS resource is short. (This option may not be available in certain OfficeServ models.).
		SIP2SIP MGI	If this option is set to ON, MGI is always used in case of SIP trunk to SIP trunk call.
		SIP-T RBACK	This option selects which ring back message has to be sent to the opposite party. (180/183)
		sRTP	Disable: Do not use sRTP, Enable: Use sRTP
29	TRKFWD TO OPERAT		When this option is set to ON, if a phone which sets call forward receives trunk call, incoming trunk call will be forwarded to the operator. (This option may not be available in certain countries.)
31	BUSY TONE FREQ		This option selects which Busy Tone Frequency has to be used. (This option is only available in Latin America)
32	SVM OPTION		If this option is set to ON, system provides IP service of SVMi-20i card.

(Continued)

No	Option	Description
33	CLI NAME PRIORTY	This option selects which CLI name has to be shown on the phone. 0. CLIP XLAT NAME: Even if the incoming call has its CLI name, system will display CLIP translation name in MMC728. If CLIP translation name is not indicated, received CLI name will be shown. 1. RECV CLIP NAME: System will display received CLI name even if there is CLIP translation name in MMC728. If there is no received CLI name, CLIP translation name will be shown.
34	SYS TIME ZONE	This time zone is applied when NTP is used.
35	TRUNK LIMIT USE	When this option is set to ON, system restricts trunk call duration by following MMC770 Trunk Limit Time. (This option may not be available in certain countries.)

ACTION

1) Press Transfer button and enter 861.
   Display shows:

2) Enter the option number.
   OR
   Press Volume button to select and press Right Soft button to move cursor.

3) Enter 1 or 0 to enable or disable.
   OR
   Press Volume button to select and press Right Soft button to store.

[863] SYSTEM NODE INFORMATION

This MMC is the program that specifies the system information of SPNET (Samsung Protocol Networking). It is useful when many systems are consisted through SPNET and interlocked with LCR. There are maximum 2000 entries.

No	Option	Description
0	ACCESS NUM	Other System's ID
1	IP ADDR	Other System's IP address
2	TEL NUMBER	Rerouting Trunk Number (excluding VoIP Trunk Number). If SPNET function is not work, Call is rerouted through this trunk
3	MAX COUNT	If you dial a valid digit string until Max Count number, the system set up call.
4	NO MGI	No: Use MGI as of old, Yes: Don't use MGI (This option can be shown in case that MMC 861 'MPS SERVICE' set to ENABLE)

> **NOTE** SPNET is VoIP Network function developed by Samsung and it's not standard function.

CONDITIONS

LINK ID should not be inputted at MMC 820 SYSTEM LINK and ACCESS NUMBER & TEL NUMBER should be inputted at LCR table.

ACTION   DISPLAY

1) Press Transfer button and enter 863.
   Display shows:

   ```
   (0001) ACCESS NUM
   ```

2) Enter the node entry number.
   OR
   Press Volume button to select and press
   Right Soft button to move cursor.

   ```
   (0001) ACCESS NUM
   ```

3) Enter the option number
   OR
   Press Volume button to select and press
   Right Soft button to store.

   ```
   (0001) ACCESS NUM
   ```

4) Enter the access number.

   ```

[870] CNF24 OPTIONS

This MMC permits the adjustments of CNF24 card options and is used in case of Meet-me conference. Only OS7400, OS7200 and MP20S support CNF24 card.

No	Option	Description
00	PASSWORD ENABLE	User who wants to join Meet-me conference doesn't have to input password when this option is set to DISABLE.
01	GREETING ENABLE	Participant can't hear greeting announcement when this option is set to DISABLE.
02	WHO AM I ENABLE	Participant doesn't have to record who am I when this option is set to DISABLE.
03	SPA ENABLE	1st participant can hear SPA (Sole Participant Audio) when this option is set to ENABLE.
04	CONF JOIN ALARM	Current participants can hear join-alarm tone when a new member joins Meet-me conference.
05	CONF LEAVE ALARM	Current participants can hear leave-alarm tone when one of participants leaves Meet-me conference.
06	CONF END ALARM	Participants can hear conference-end-alarm tone when current Meet-me conference is terminated.
07	EARLY ENT TIME	Participants can join Meet-me conference earlier than reserved time.
08	MAX RECORD TIME	This time indicates how long user can record current Meet-me conference.
15	REC ALM CAPACITY	If the capacity of CN24 card reaches the Record Alarm Capacity, system makes an alarm to make user to check current capacity.
16	REC DEL CAPACITY	If the capacity of CNF24 card reaches the Record Delete Capacity, system deletes excess capacity.

CONDITIONS

When using the MMC [870]

This MMC is only shown in OfficeServ 7400, 7200 and MP20S.

NOTE

ACTION

1) Press Transfer button and enter 870.
   Display shows:

2) Enter the option number.
   OR
   Press Volume button to select and press Right Soft
   button to move cursor.

3) Enter 1 or 0 to enable or disable.

[871] CNF24 PARAMETERS

This MMC provides network configuration of the CNF24 card(s) in the system.

No	Parameter	Description
0	IP ADDRESS	Specifies the IP address for the CNF24 card.
1	GATEWAY	Specifies the designated IP gateway address used for contacting IP devices beyond the local subnet.
2	SUB MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices (subnet) that are within 'direct reach' of the CNF24. (without having to go through the designated network IP gateway)
3	IP TYPE	Specifies if the system will be routing data over a public or private network.
4	LOCAL RTP	Specifies local rtp port. The default value is 30000 and the value range is between 10000 and 60000. If you use MPS function, the value must be not duplicated with MMC 861 MPS local rtp port.
5	CARD RESET	Reboots CNF24 card.
6	PUB IP1	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
7	PUB RTP1	Public RTP Port which NAT system binds a private RTP port with
8	PUB IP2	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
9	PUB RTP2	Public RTP Port which NAT system binds a private RTP port with
10	PUB IP3	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
11	PUB RTP3	Public RTP Port which NAT system binds a private RTP port with
13	MAC ADDR	Displays the MAC address of an CNF24 card
14	IP VERSION	Specifies CNF24 IP version. (Ipv4/Ipv6)
18	LICENSE	Displays CNF24 License numbers. (Read Only)
19	MEET-ME CH	Specifies license numbers for only Meet-me conference. (Read Only. User can set this option by WEB menu.)
20	FTP PORT	Specified FTP port of CNF24. (default: 21)
21	UPGRADE PORT	Specified Upgrade port of CNF24. (default: 60024)

> **NOTE**
>
> **CNF24 PARAMETERS**
> - IP ADDRESS, GATEWAY, and SUB MASK-any changes to these parameters will not be applied until the CNF24 card is reset.
> - When changing any IP address/value, three digits must be entered for each (octet) field. For example, 192.168.1.10 should be entered as 192.168. 001. 010.

CONDITIONS

> **When using the MMC [871]**
>
> This MMC is only shown in OfficeServ 7400, 7200 and MP20S.
>
> **NOTE**

ACTION

1) Press Transfer button and enter 871.
   Display shows the first CNF24 card.

2) Enter CNF24 number.
   OR
   Press Volume button to make selection and press Right Soft button to move cursor.

3) Enter CNF24 parameter number.
   OR
   Press Volume button to make selection and press Right Soft button to move cursor.

4) Enter CNF24 parameter.
   OR
   Press Right Soft button to move cursor.

5) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC.

[873] SVMi-20i PARAMETERS

This MMC provides network configuration of the SVMi-20i card(s) in the system.

No	Parameter	Description
0	IP ADDRESS	Specifies the IP address for the SVMi-20i card.
1	GATEWAY	Specifies the designated IP gateway address used for contacting IP devices beyond the local subnet.
2	SUB MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices (subnet) that are within 'direct reach' of the SVMi-20i. (without having to go through the designated network IP gateway)
3	IP TYPE	Specifies if the system will be routing data over a public or private network.
4	LOCAL RTP	Specifies local rtp port. The default value is 30000 and the value range is between 10000 and 60000. If you use MPS function, the value must be not duplicated with MMC861 MPS local rtp port.
5	CARD RESET	Reboots SVMi-20i card.
6	PUB IP1	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
7	PUB RTP1	Public RTP Port which NAT system binds a private RTP port with
8	PUB IP2	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
9	PUB RTP2	Public RTP Port which NAT system binds a private RTP port with
10	PUB IP3	Pulbic IP Address is only used for VoIP signaling protocols in a NAT network. NAT system binds IP Address with Public IP and processes a voice stream. See System IP Type on MMC 830.
11	PUB RTP3	Public RTP Port which NAT system binds a private RTP port with
13	MAC ADDR	Displays the MAC address of an SVMi-20i card
14	IP VERSION	Specifies SVMi-20i IP version. (Ipv4/Ipv6)
20	FTP PORT	Specified FTP port of SVMi-20i. (default: 21)
21	UPGRADE PORT	Specified Upgrade port of SVMi-20i. (default: 60024)

NOTE

SVMi-20i PARAMETERS

- IP ADDRESS, GATEWAY, and SUB MASK-any changes to these parameters will not be applied until the SVMi-20i card is reset.

- When changing any IP address/value, three digits must be entered for each (octet) field. For example, 192.168.1.10 should be entered as 192.168. 001. 010.

CONDITIONS

	When using the MMC [873]
NOTE	This MMC is only shown in OfficeServ 7400, 7200.

ACTION

1) Press Transfer button and enter 873.
   Display shows the first SVMi-20i card.

2) Enter SVMi-20i number.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

3) Enter SVMi-20i parameter number.
   OR
   Press Volume button to make selection and press
   Right Soft button to move cursor.

4) Enter SVMi-20i parameter. (e.g. ip address)
   OR
   Press Right Soft button to move cursor.

5) Press Transfer button to save and exit.

[874] MULTICAST PAGE IP ADDRESS

This MMC is used to set multicast page IP address.
Voice paging service for OSPPs can be supported by unicasting or multicasting, which is called by Hybrid Voice Paging. When OSPP phones co-located with system are serviced by multicasting, only one MGI channel is used. So using HVP, MGI channel usage can be decreased.

NOTE

When changing IP

When changing any IP address/value, listed below, three digits must be input for each (octet) field. Example 192.168.1.10 input must be: 192 168 001 010

ACTION

1) Press Transfer button and enter 874.
   Display shows the first table number.

2) Enter table number (01-80) via dial keypad.
   OR
   Press Volume button to make selection and press Right Soft button to move cursor.

3) Enter IP address via dial keypad.
   Cursor will return to step 2.

4) Press Transfer button to save and exit.
   OR
   Press Speaker button to advance to next MMC entry.

WEEE SYMBOL INFORMATION

Correct Disposal of This Product
(Waste Electrical & Electronic Equipment)

(Applicable in the European Union and other European countries with separate collection systems)

This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take these items for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract. This product and its electronic accessories should not be mixed with other commercial wastes for disposal.

BATTERY SYMBOL INFORMATION

Correct disposal of batteries in this product

(Applicable in the European Union and other European countries with separate battery return systems.)

The marking on the battery, manual or packaging indicates that the battery in this product should not be disposed of with other household waste. Where marked, the chemical symbols Hg, Cd or Pb indicate that the battery contains mercury, cadmium or lead above the reference levels in EC Directive 2006/66.

The battery incorporated in this product is not user replaceable. For information on its replacement, please contact your service provider. Do not attempt to remove the battery or dispose it in a fire. Do not disassemble, crush, or puncture the battery. If you intend to discard the product, the waste collection site will take the appropriate measures for the recycling and treatment of the product, including the battery.
