1.5 Technical Specification

Items		V100 Video Phone (IP)
System Configuration	Operating System	Android 5.1
	CPU	Quad Core
	FLASH	8GB
	RAM	1GB
Display		7", 800x1280, IPS multi touch screen
Display angle adjustment		Two angles adjustment
Buttons		4 soft Android keys 12 alphanumeric keys 5 Navigate keys: up/down/left/right/OK 5 Function keys: Hold, Re-dial, Hand-free, Conference, Delete
Camera		5 mega-pixel, can rotate up and down, can turn off by hard switch
Ethernet port		2 Ethernet ports, 10M/100M/1000M, adaptive; POE (Optional)
WIFI		2.4G/IEEE802.11b/g/n
Bluetooth		BT2.1+EDR/3.0/4.1LE
SD card slot		1 SD card slot, support up to 128G
USB2.0 interface		1 USB2.0, support U disk, keyboard, mouse
Trunk interface		SIP2.0、IMS-SIP
Handset port		RJ-9
Protocol	Network protocol	TCP/IP,SIP,SDP,UDP,RTP,RTCP,DHCP,DNS,HTTP,HTTPS,SNTP,XML,TR069
Audio	Audio codec	Encoding/Decoding: G.711a、G.711u、G.729、G.722、iLBC、SILK、OPUS
	Audio features	DTMF:inband/RFC2833 AEC: Acoustic Echo Chancellor PLC: Packet Loss Concealment VQM: Voice Quality Manager AGC: Automatic Gain Control VAD: Voice Activity Detection CNG: Comfort Noise Generator

		AJB:Adaptive Jitter Buffer Cancellation Noise Reduction	Sidetone ANR: Adaptive
Video	Video codec	Encoding: H.264, VP8 H.264, VP8, H265, MPEG-4	Decoding:
	Video resolution	CIF(352*288) 720p (1280*720) QVGA (320*240)	VGA(640*480)
Telephony	Contacts	1000 contacts, support contacts search, import, export	
	Call logs	1000 call logs for each received calls/missed calls/dialed numbers	
	Local conference	6 parties audio conference	
	Telephony features	Call Hold, Call Forward, Call Transfer, Three-Way Calling, Call Waiting, Call Reject, Call ID, Missed Call Reminder, Speed Dial	
	Line&SIP account	4 lines, 4 accounts	
	Android OS features	Build-in APP: calendar, clock, gallery, web browser, search	
Security	TLS,S RTP		
Customized applications	SDK/API for customer application development; Build-in company contacts		
Power adapter	Input: AC100~220V Output: DC12V/1A		
Size	200 mm (W) x150mm (D) x 220 mm (H)		
Mouting	Desktop, wall-mount		

2 Phone Functions

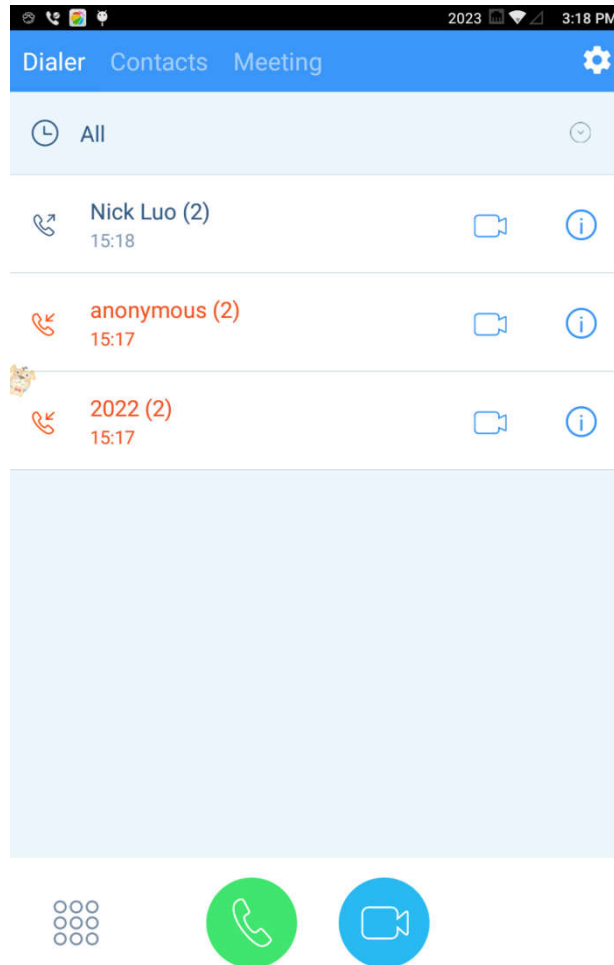

2.1 PhoneInterface

Icons	Description
	Dialer: Enter the System Dialer interface
	Call Log: Enter the System Call logs interface
	Contact: Enter the System Contact interface
	Settings: Enter the V100 Settings interface

2.2 Call LogsInterface

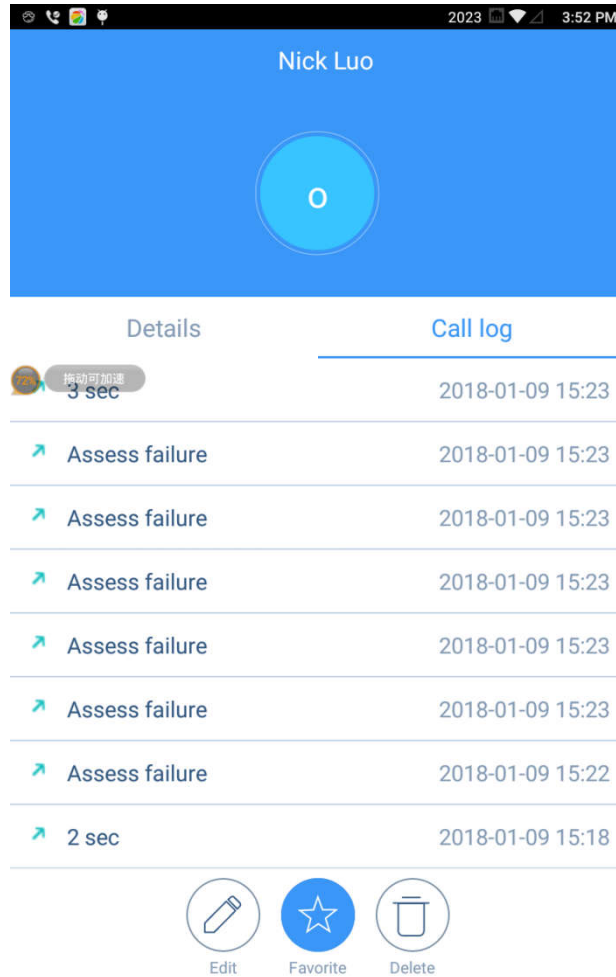

Tap  on the main interface, jump to the “Call Logs” interface, as shown in the screenshot below. There are “ALL” call records, “Missed” call records and “Unknown” call records.

Call LogsInterface

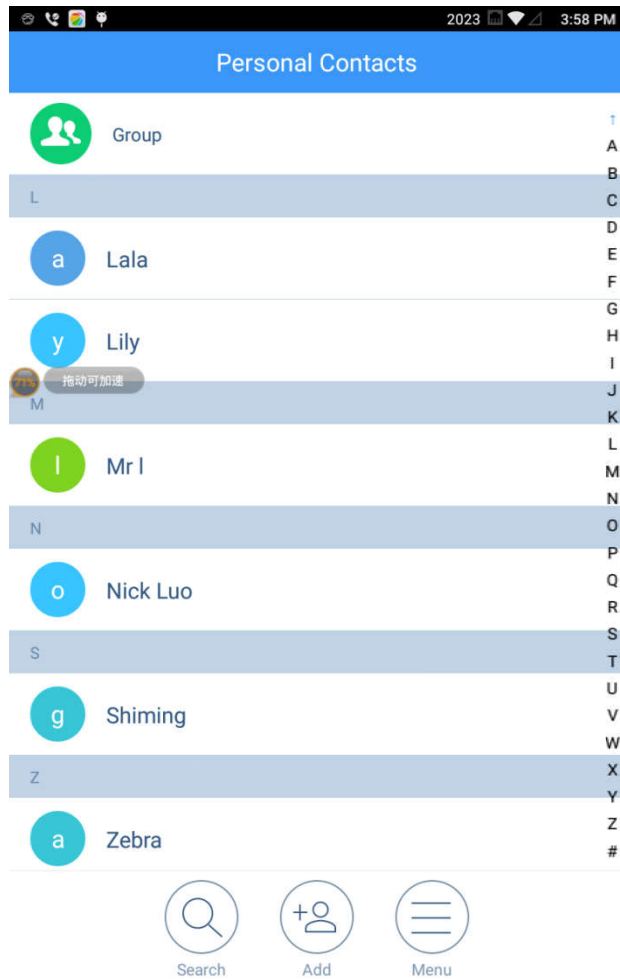

- A. The Call log contains “ALL” , “Missed” and “Unknown” call records, and every call will be recordeddetailedly. User can tap single log to start a call directly,or click  ” to start a video

call directly. User can also tap “  ” to view all details of this number, containing the call records, as shown in the screenshot below:

Detailed Call RecordsInterface

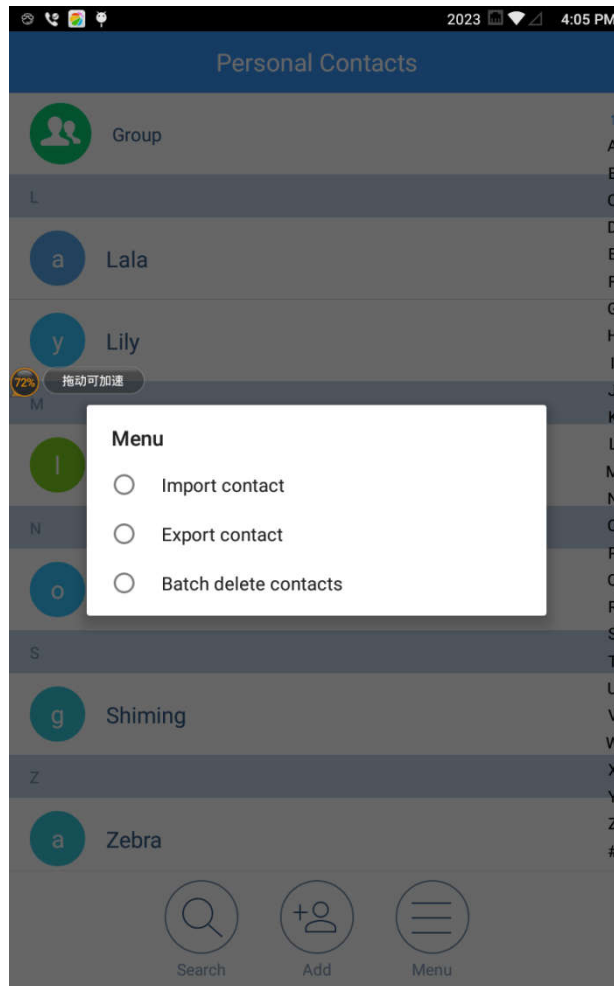

B. Contacts: users can import, export, search, add, edit and delete contacts, as shown in the screenshot below:

Personal ContactsInterface

2.3 Import and Export of Contacts

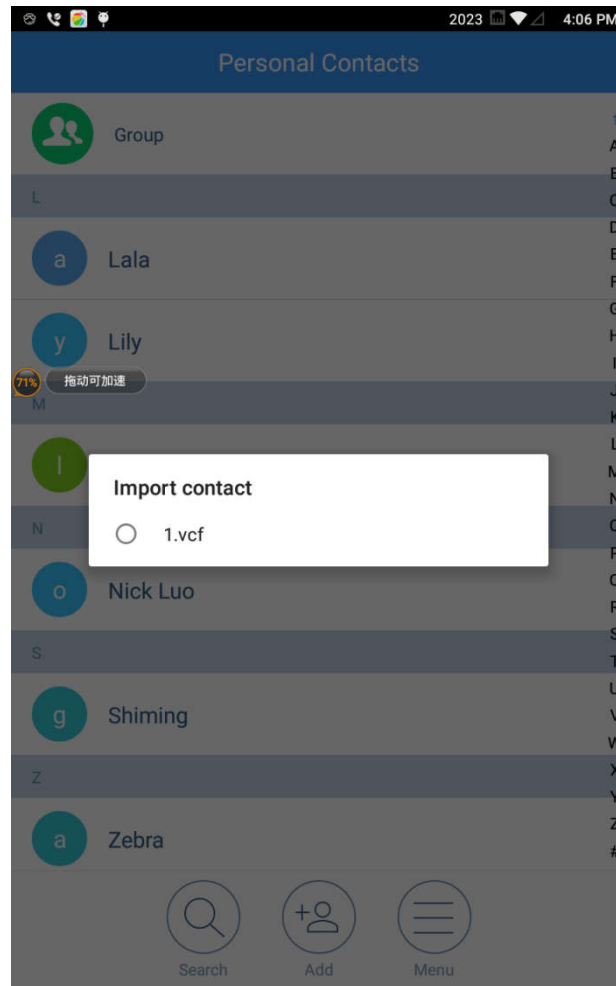

Tap  on main interface directly, tap "Menu" icon at lower right corner to trigger theContacts import and export interface, as shown in the screenshot below:

Import/Export Contacts Interface

2.3.1 ImportContacts

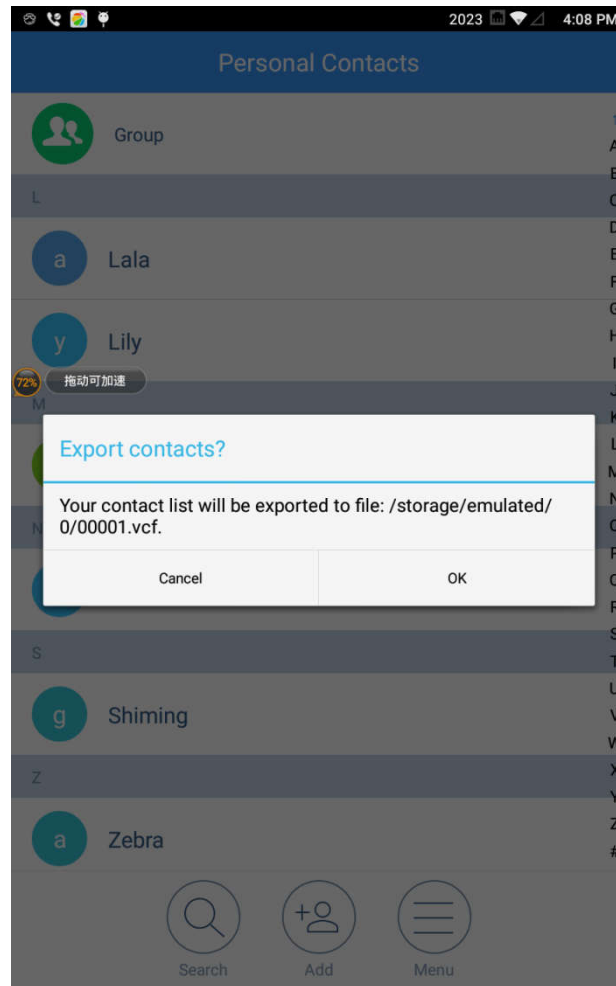

Tap "Import contact" on "Import/Export Contact" Interface, and then the phone will automatically scan contacts document from FLASH or SD card, listing all available VCF files ready to import. Select the file that you want, and tap the "Import" key as shown in the screenshot below:

Import Contact Interface

2.3.2 Export Contacts

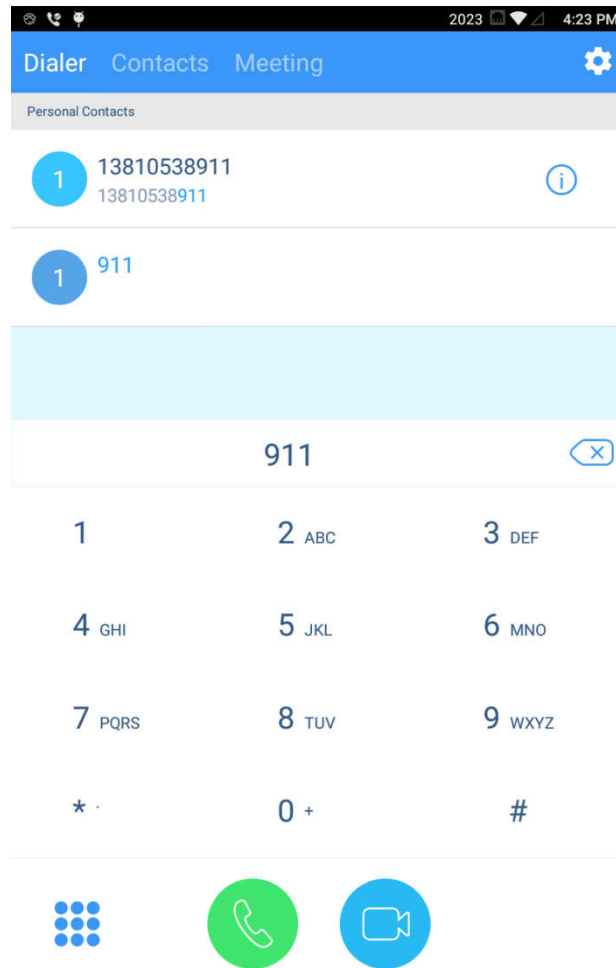

Tap "Exportcontact" on the "Import/Export Contact" Interface,jump to "Export Contact" Interface,and then tap "OK" to export contact file.

Export Contact Interface

2.4 MakingCalls

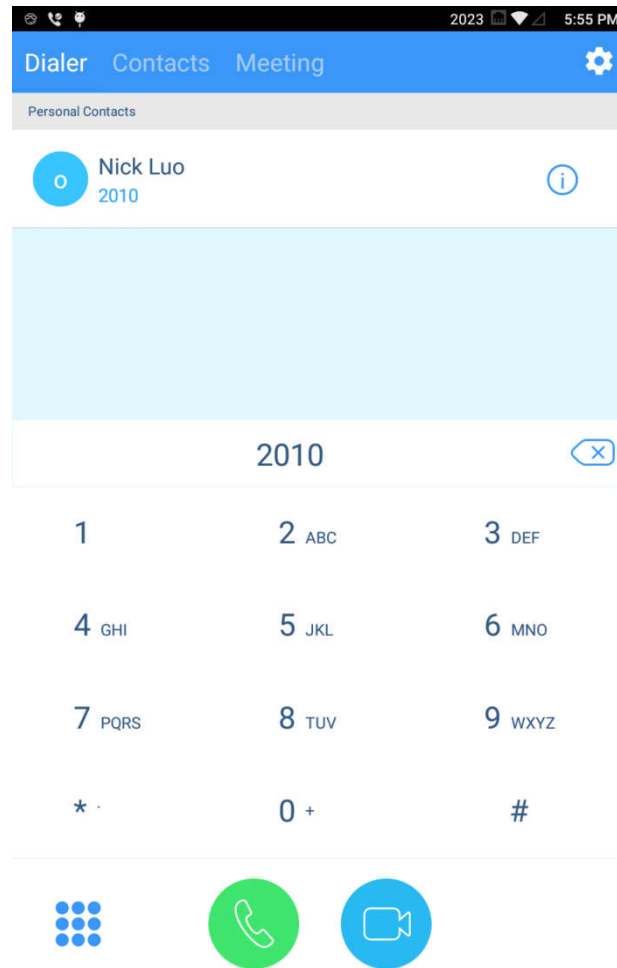

Tap “” on main interface to trigger Dialer interface and then input the telephone number that your want to dial, as shown in the screenshot below:

Tap “” to make call.

2.5 Making VideoCalls

Tap “” on main interface to trigger Dialer interface and then input the telephone number that you want to dial, as shown in the screenshot below:

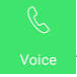

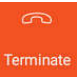

Tap “” to make video call.

2.6 Answering Calls

- A、 When you receive calls from contacts, the incoming call interface will appear and the caller’ s number and name will both be displayed, as shown in the screenshot below.
- B、 When you receive calls from whom is not in the contacts list, and then only phone number will be displayed in the incoming

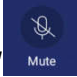

call interface without caller's name, as shown in the screenshot below.

- C、 You can select "  " to forward/ "  " to accept/ "  " to reject when ringing, as shown in the screenshot below.

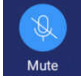

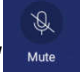

Call from Contacts Other calls (not in Contacts)

2.7 Mute during Call

During an active call, user can press "  " key to mute the call. After "Mute" operation is done, the other party will not hear you, but you

can still hear the other party is speaking. At the same time the mute key

will become “  ” and the user is informed that his/her call is muted.

If user wants to resume the voice, just tap the mute key “  ” again.

2.8 Switch between Audio and Video

User can switch from the audio to the video call when a call is active, as shown in the screenshot below:

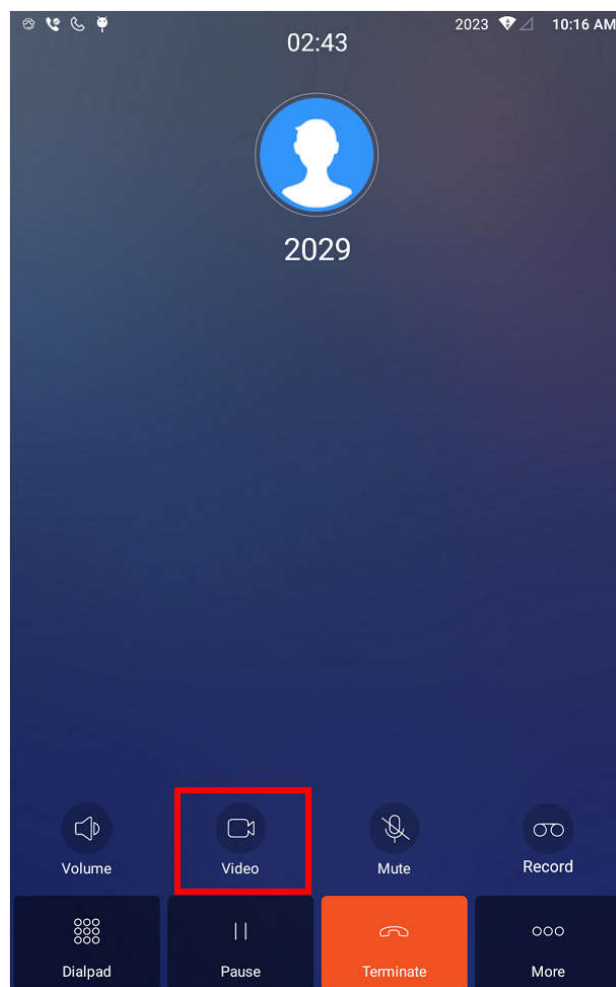

Figure 1 One party taps "Video", switch to Video call

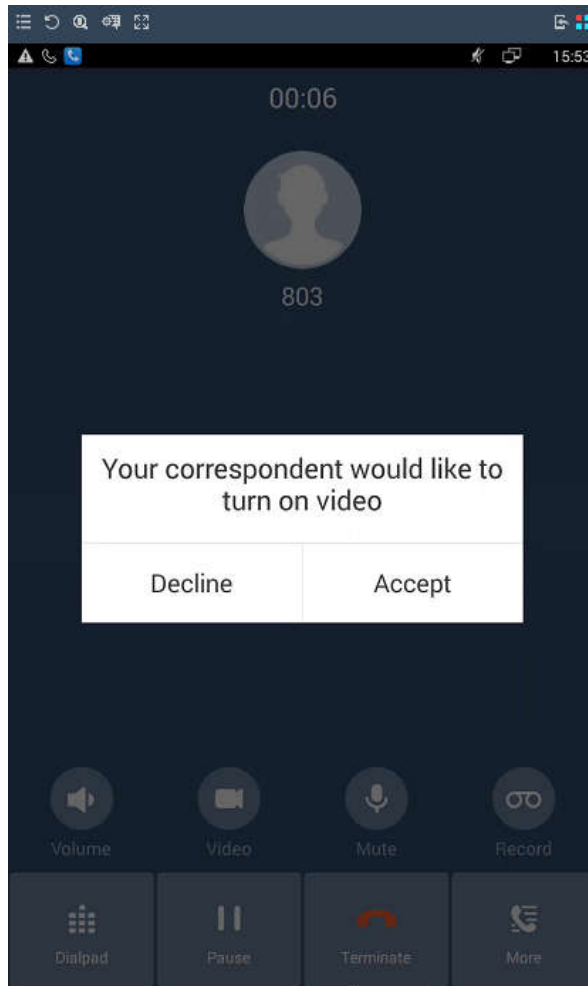

Figure 2 The other party accepts and the video call begins

1. Switch from audio to video:

User's making a voice call, as shown in the above Figure 1.

If the user wants to switch to video call, he/she can click  to switch to video call, the other party pops out a notification to start the video call, as the figure show in the below.

2. Switch from Video to Audio:

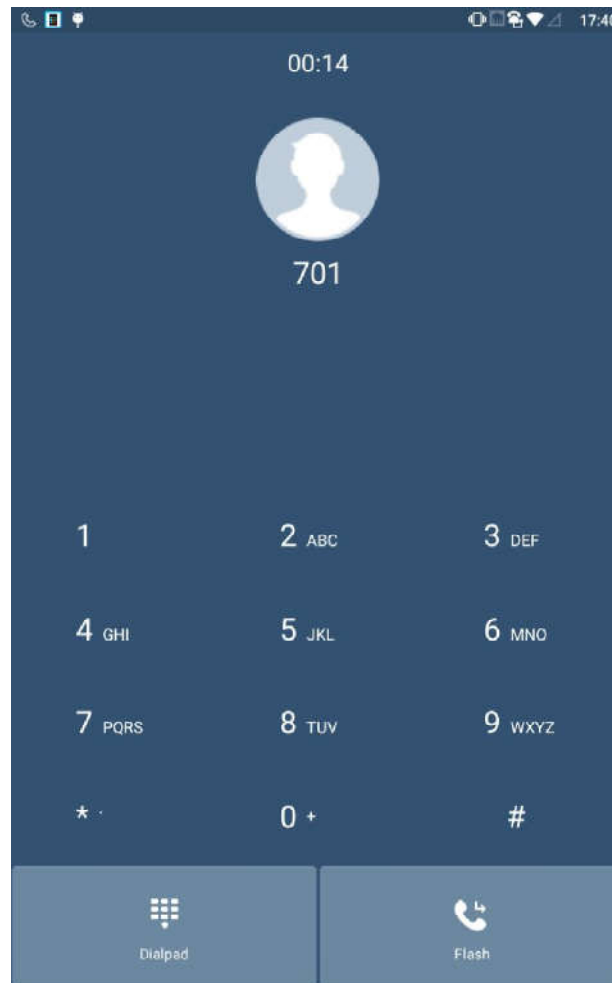

When user is making a video call, he/she can click  to switch to audio call.

2.9 Call Hold, Resume and Switch

2.9.1 Call Hold

In an active call, user can tap the "Dialpad" button on the phone interface and then click "Flash" button to put the call on hold, as

shown in the screenshot below:

2.9.2 Resume from Call Hold

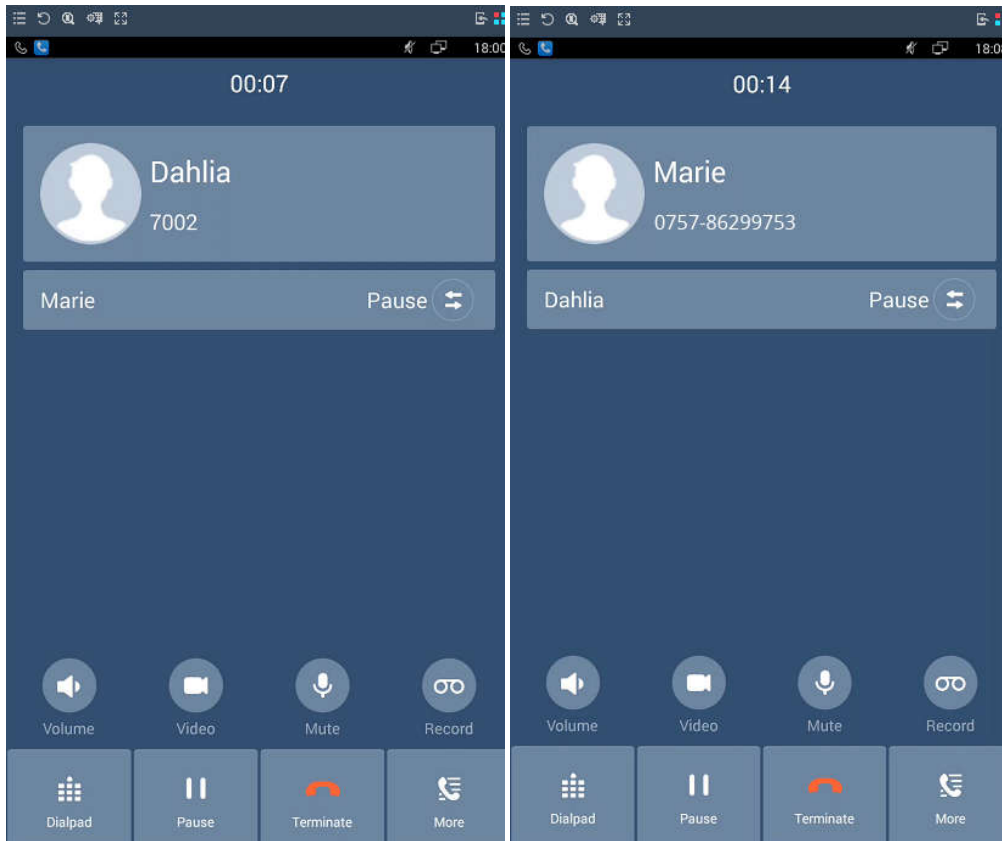

You can tap the “Flash” button to resume the call you put on hold, as shown in the screenshot below:

2.9.3 Switch between Call Hold

When multiple calls are active, you can tap the desired call and hold other calls. To tap the held call , you can resume it.

For example, at first the call is active with Dahlia, Marie is on hold,

tap  then the call from Marie is resumed, and Dahlia is placed on hold, as shown in the screenshot below.

Before switch

After switch

2.10 Call Waiting

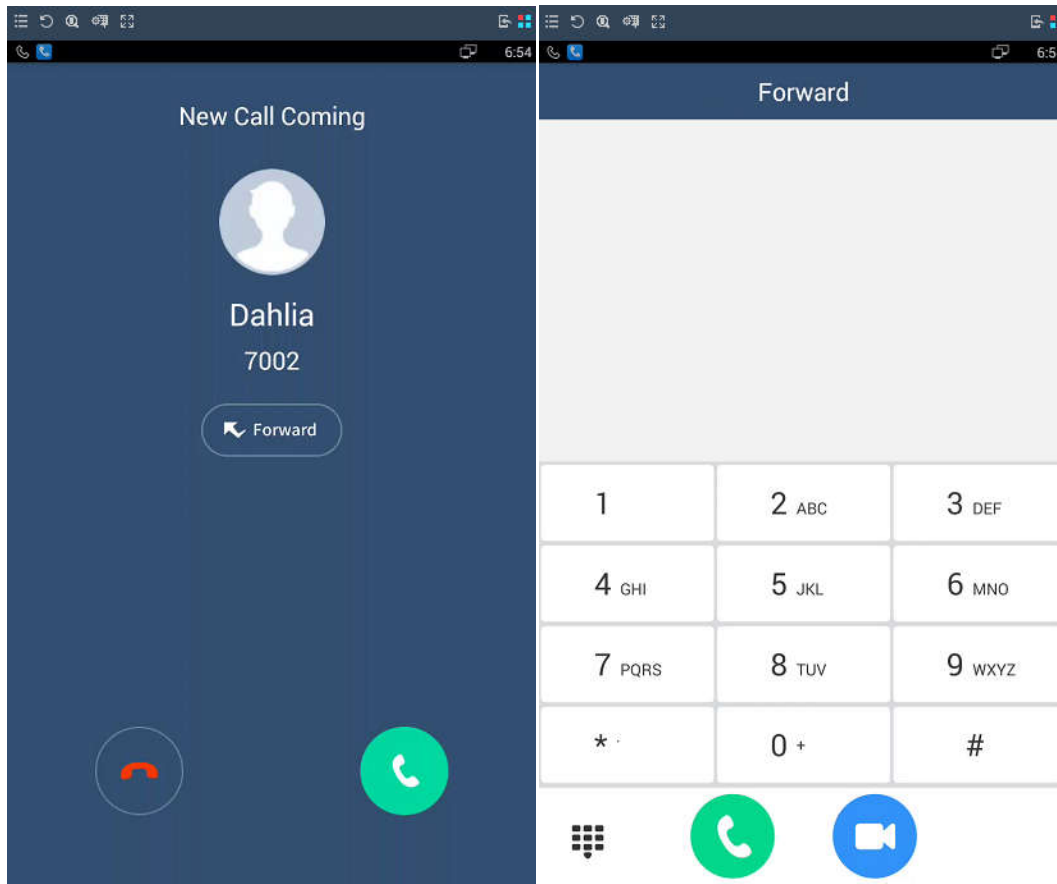

If a call is already active on the phone, a prompt screen will pop up when a new call is incoming. User can choose to tap the  icon to begin multiple calls, also can tap  to reject the new coming call, otherwise the new caller will keep listening the ring back tone, as shown in the screenshot below.

Call Waiting

2.11 Call Forward

For the incoming call, as shown in the screenshot below, user can click "Forward" key to trigger the dial pad, input the wanted telephone number and press the pound (#) key (physical button of the phone) /  on screen for voice call /  on screen for video call to forward the call to the wanted number.

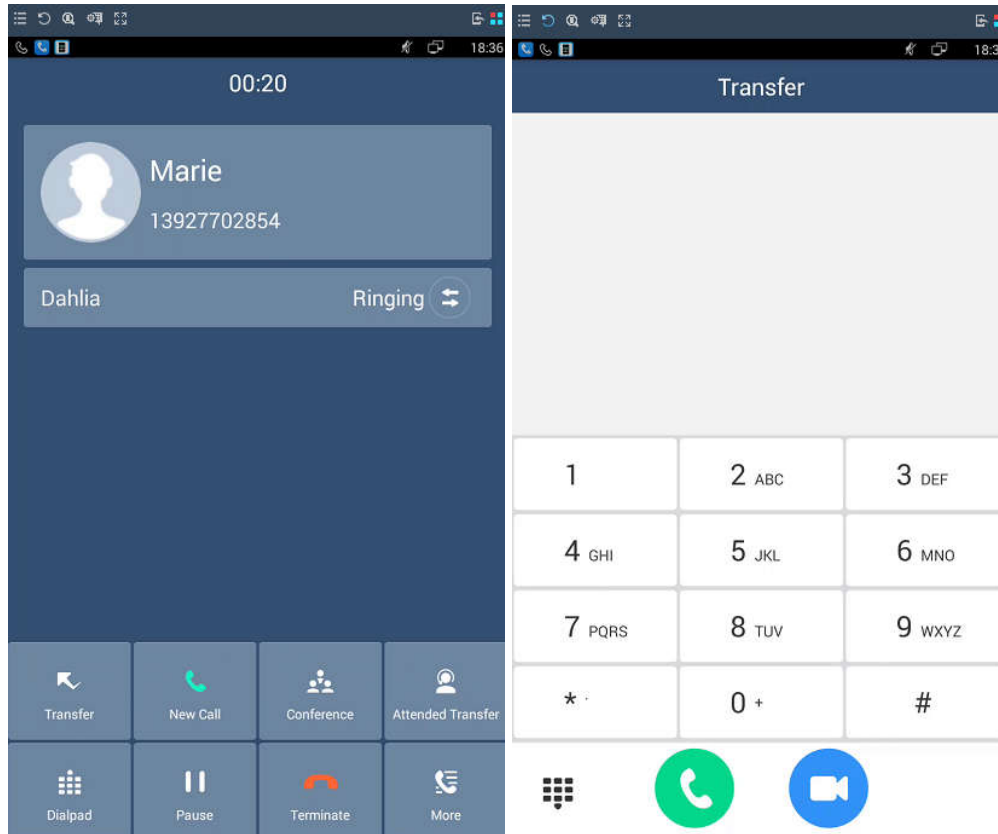

Incoming Call Interface

Call Transfer Interface

2.12 Blind Call Transfer

During an active call , user can do the following steps to transfer the call to the third party without his/her permit.:

- i. Tap "More" key.
- ii. Tap "Transfer" to Enter the dial pad,input the wanted telephone number, and then press the pound (#)key (physical button of the phone)/  on screen for voice call/  on screen for video call to make a blind transfer.

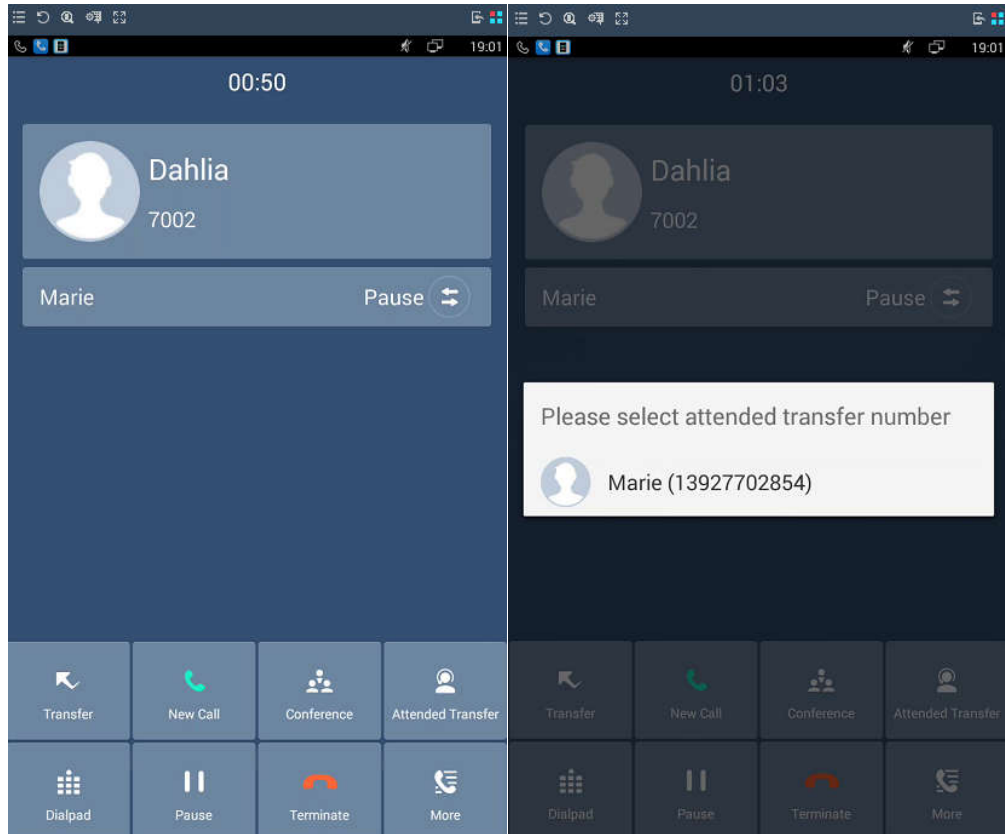

The dial pad for Blind Transfer interface

2.13 Attended Transfer

When two different calls are active, user can click “More” menu, and click the wanted party to finish the transfer, and user quit finally.

For example, Marie’ s incoming call is active, the user can call another phone number like Dahlia’ s number, after Dahlia’ s call is successfully connected, then click “Attended Transfer” to make Marie and Dahlia connected, and user quit, as shown in the screenshot below.

The Attended Transfer function also depends on the IPPBX that the smart phone’ s sip account is registered to.

More Interface Interface of AttendedTransfer

2.14 ConferenceCall

User can make a new call during an active call, and switch to ConferenceCall (The number of call parties is more than two).

The "ConferenceCall" can be performed by two ways:

- The physical ConferenceCallKey  on the phone.
- Tap "More" in the call interface, and then tap  "Conference" key, then the conference call begins, as shown in the screenshot below:

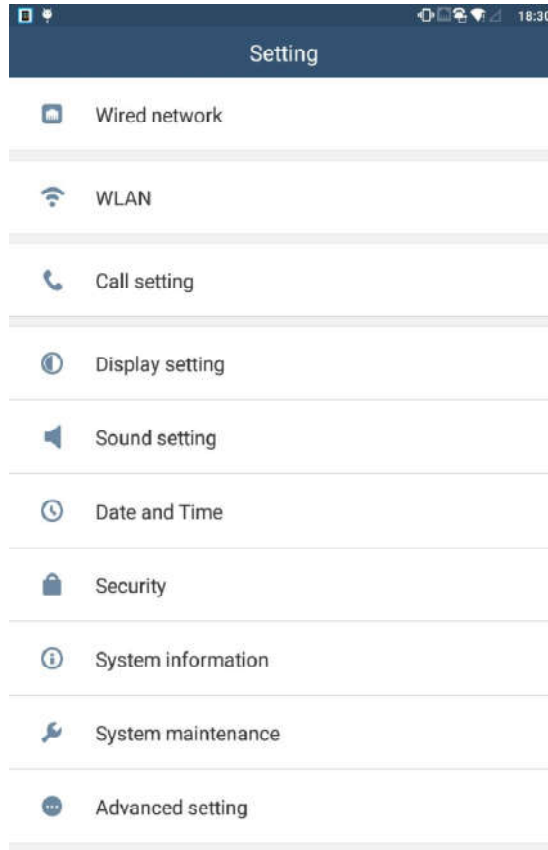

More InterfaceConferenceCallInterface

3 Phone setting

Tap  on the main interface to triggerSettings interface, as shown

in the screenshot below:

Settings Interface

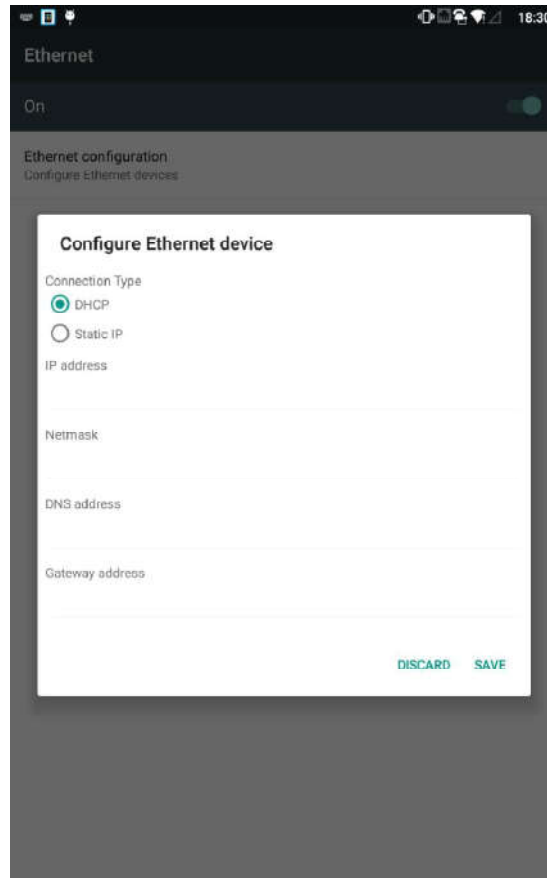

3.1 Network Setting

3.1.1 Wired Network

User can configure network parameters by two ways:

Dynamic Host Configuration Protocol (DHCP) and Static IP.

DHCP: The phone default mode is DHCP, as is shown in the screenshot below. User can also configure static IP by himself through tick the Static IP option.

Wired network interface

3.1.2 WLAN

Click WLAN interface, turn on the WLAN switch, the phone will search and list all WIFI-SSID hotspots automatically, user can choose the desired hotspot, input the authentication password to connect. As shown in the figure below.

WLAN interface

3.2 VOIP Setting

VOIP settings include account settings, call settings, other settings, as shown below:

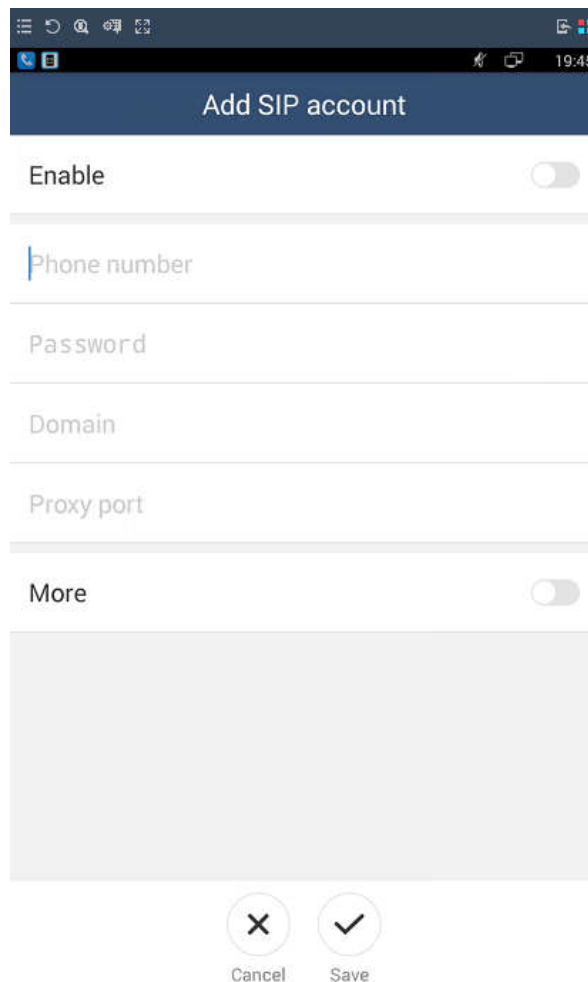

3.2.1 Configuration of SIP Account

Steps: Setting->Account setting->Add SIP account

In "Add SIP account" interface User can configure SIP account, and turn the "Enable" to activate the SIP account.

The necessary information contain "Phone number" (account number), "Password", "Domain" and "Proxy port".

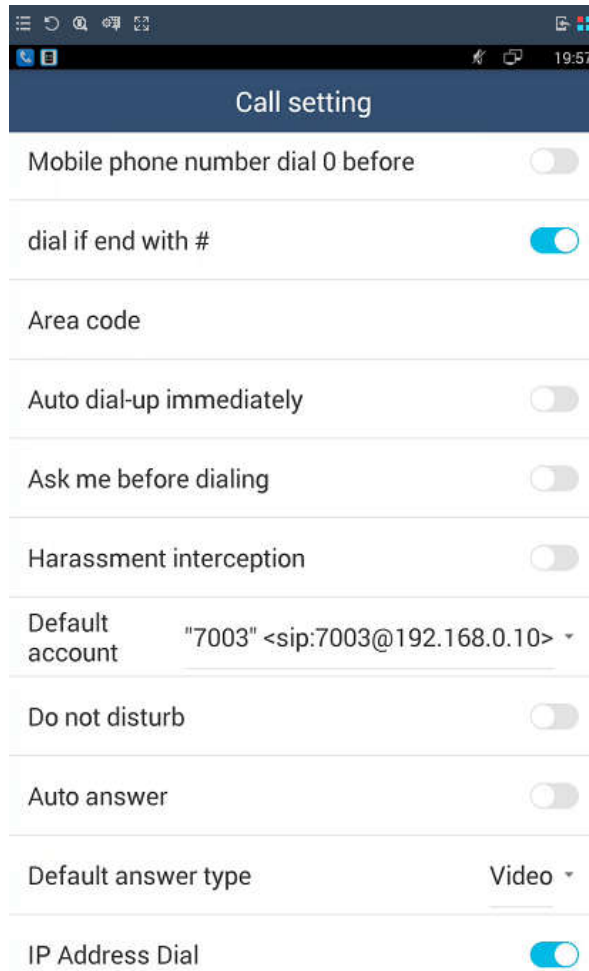

User click "more" to input Proxy address, Authentication User and Display name configurations. Normally Proxy address is same as Domain, Authentication User and Display name are same as Phone number, as shown in the screenshot below:

SIPAccount Configuration Interface

3.2.2 Call Settings

The call settings are mostly the call parameters shown in the screenshot below:

Call Configuration Interface

Item	Description
Mobile phone number dial 0 before	Enable it then the phone will automatically add 0 before dialing a mobile number.
Dial if end with #	Enable it then user can press pound key(#) to send the

	calling number immediately.
Area code	Set area code of your location
Autodial-up immediately	After the switch is turned on, two configuration items appear: "Auto dialnumber" and "Dialdelay"
Auto dialnumber	Configure telephone number that needs to be automatically dialed
Dialdelay	Configure the time period before the number is automatically dialed out and dial such telephone number immediately after user off-hook.
Ask me before dialing	After enabling it, phone will pop up a list for the user to select which SIP account number will be used to dial out.
Default account	Configure default outgoing call SIP account. After chosen the above mentioned pop-up will not appear.

3.2.2.1 Blacklist

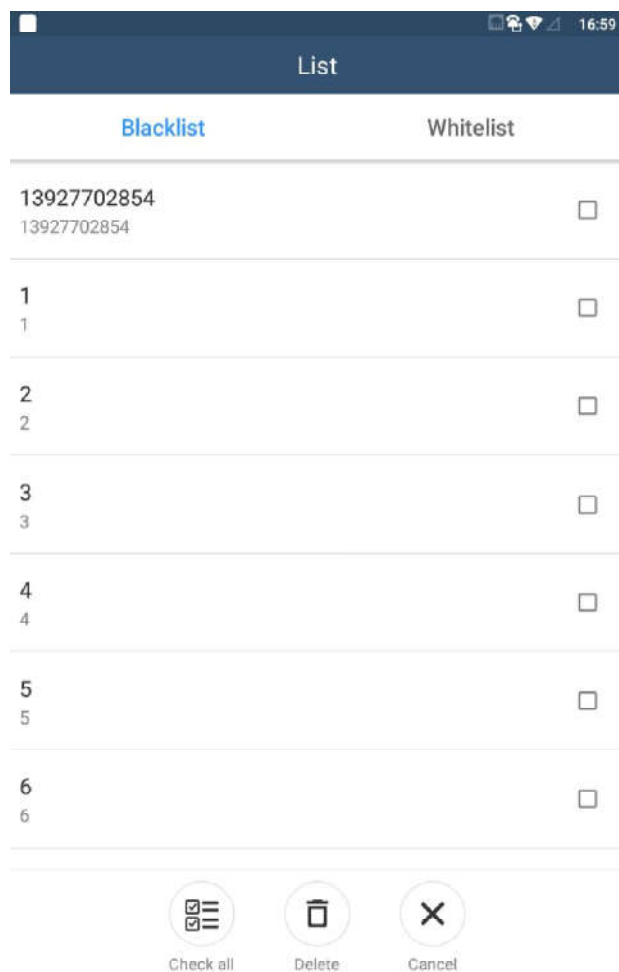

User can store up to 20 contacts in the blacklist. Incoming calls from the blacklist will be rejected automatically, and displayed in the Block logs interface.

Tap  to enter the Blacklist and Whitelist Setting interface. The interception rules can be "Only block blacklist" and "Only answer whitelist" .

Switch the "Intercept service" on, the blacklist and whitelist function is active. Tap the "Blacklist" or "Whitelist" , user can edit the blacklist and whitelist. The max number of both records is 20.

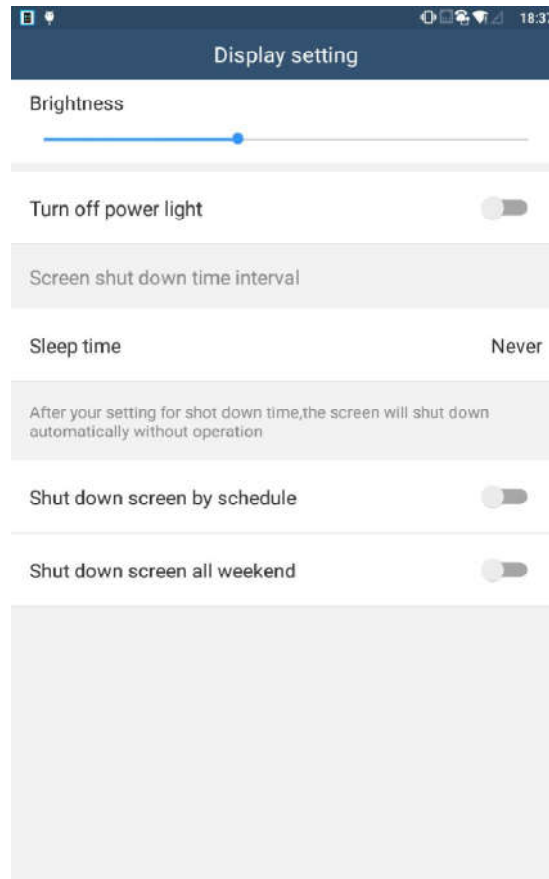

3.2.3 Other Setting

Item	Description
Clear account information	Clear all sip account information
Echo cancellation level	Set the echo cancellation level, the default is "Medium"

3.3 Display Setting

Configure display related parameters, as shown in the screenshot below.

Display setting interface

Items	Description
Brightness	Configure the brightness of the screen
Turn off power light	Turn it on to turn off the power light of the phone.
Sleep time	Turn it on to set sleep time , default interval is 15

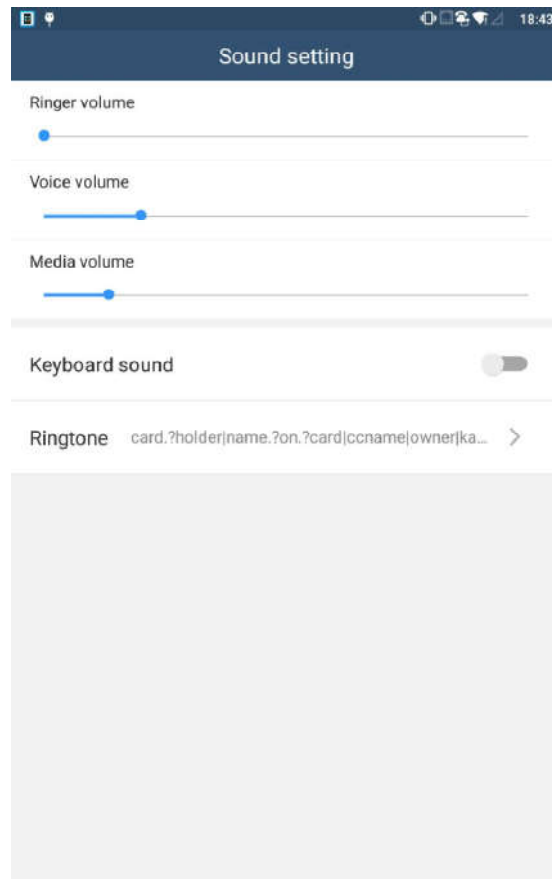

seconds.
